Lecture 22 - Effect of Vertical vis-a-vis Curved Mould

Lecture 23 - Quality of Cast Product

Lecture 24 - Role of Concast Process, Caster Design and Steel Grade

Lecture 25 - Primary Cooling in Caster Mould

Lecture 26 - Heat Transfer in Mould

Lecture 27 - Cast Structure and Dendrite Size

Lecture 28 - Role of Mould Oscillation

Lecture 29 - Role of Chemistry - Part I

Lecture 30 - Role of Chemistry - Part II

Lecture 31 - Role of Segregation - Part I

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Role of Segregation - Part II

Lecture 33 - Deleterious Effect of Phosphorus

Lecture 34 - Strength of Solidifying Strand

Lecture 35 - Brittle Zone Near Solidus

Lecture 36 - Strength and Toughness of Solid Shell

Lecture 37 - Role of Chemistry on Solidification Behaviour

Lecture 38 - Sticking vis-a-vis Depression Behaviour

Lecture 39 - Role of Chemistry on Bulging or Depression Tendency - Part I

Lecture 40 - Role of Chemistry on Bulging or Depression Tendency - Part II

Lecture 41 - Effect of Cast Grain Size

Lecture 42 - Brittle Temperature Regions

Lecture 43 - Role of Secondary Cooling - Part 1

Lecture 44 - Role of Secondary Cooling - Part 2

Lecture 45 - Typical Cracks and Defects - Part I

Lecture 46 - Typical Cracks and Defects - Part II

Lecture 47 - Remedial Measures to Control Defects - Part I

Lecture 48 - Remedial Measures to Control Defects - Part II

Lecture 49 - Remedial Measures to Control Defects - Part III

Lecture 50 - Grade - Specific Casting Parameters - Part I

Lecture 51 - Grade - Specific Casting Parameters - Part II

Lecture 52 - Identification of Genesis of Quality Problems Through Metallographic Investigation - Part I

Lecture 53 - Identification of Genesis of Quality Problems Through Metallographic Investigation - Part II

Lecture 54 - Identification of Genesis of Quality Problems Through Metallographic Investigation - Part III

Lecture 55 - Some Examples of Quality Problems

NPTEL : Theory of Mechanism (Mechanical Engineering)

Co-ordinators : Prof. Sujatha Srinivasan

Lecture 1 - Review of Kinematics Fundamentals-I

Lecture 2 - Links, Pairs, Kinematic Chains; Planar Mobility Criterion

Lecture 3 - Mobility of Mechanisms, Grubler's Criterion and Applications

Lecture 4 - Inversions, Grashof Criterion, Kinematic equivalence

Lecture 5 - Linkage Synthesis Classification, 2-position Motion Generation

Lecture 6 - Driver dyad, Quick-return synthesis - I

Lecture 7 - Quick-return synthesis - II, 3-position Motion Generation

Lecture 8 - Specified fixed pivots, Path generation

Lecture 9 - Function generation

Lecture 10 - Function generation using relative poles

Lecture 11 - Structural Error, and Chebyshev Spacing

Lecture 12 - Chebyshev Spacing

Lecture 13 - Analytical Linkage Synthesis-I: Vector Loop Closure, Freudenstein's method

Lecture 14 - Analytical Linkage Synthesis-II: Bloch's method, Driver Dyad

Lecture 15 - Four-bar Position Analysis, Dyad or Standard Form Synthesis

Lecture 16 - Dyad Form Synthesis: Motion Generation

Lecture 17 - Dyad Form Synthesis: Path and Function Generation

Lecture 18 - Dyad Form Synthesis: Multi loop linakges

Lecture 19 - Dyad Form Synthesis: Four Position Motion Generation

Lecture 20 - Coupler Curves - I

Lecture 21 - Coupler Curves - II, Fixed and Moving Centrodes

Lecture 22 - Coupler Curves - III, Symmetrical Coupler Curves

Lecture 23 - Roberts-Chebyshev Theorem

Lecture 24 - Cognates

Lecture 25 - Velocity Analysis: Review of Velocity Polygons

Lecture 26 - Velocity Analysis: Velocity Polygons (Continued...) and Instant Centres

Lecture 27 - Velocity Analysis: Auxiliary Point Method

Lecture 28 - Auxiliary Point Method: (Continued...)

Lecture 29 - Velocity and Acceleration Analysis: Analytical Method

Lecture 30 - Acceleration Analysis: Analytical Method (Continued...)

Lecture 31 - Acceleration Analysis: Auxiliary Point Method

Lecture 32 - Force Analysis of Mechanisms, Mechanical Advantage

Lecture 33 - Force Analysis of Mechanisms - II

Lecture 34 - Balancing of Mechanisms using Counterweights

Lecture 35 - Balancing of Mechanisms using Springs

Lecture 36 - Spatial Mechanisms

Lecture 37 - Introduction to the Kinematics of Spatial Mechanisms

NPTEL : NOC:Engineering Mechanics (Mechanical Engineering)

Co-ordinators : Prof. K. Ramesh

Lecture 1 - Introduction to Engineering Mechanics - I

Lecture 2 - Introduction to Engineering Mechanics - II

Lecture 3 - Force Systems - I

Lecture 4 - Force Systems - II

Lecture 5 - Equilibrium of Rigid bodies - I

Lecture 6 - Equilibrium of Rigid bodies - II

Lecture 7 - Trusses - I

Lecture 8 - Trusses - II

Lecture 9 - Trusses - III

Lecture 10 - Beams - I

Lecture 11 - Beams - II

Lecture 12 - Beams - III

Lecture 13 - Beams - IV

Lecture 14 - Virtual Work - I

Lecture 15 - Virtual Work - II

Lecture 16 - Energy Relations

Lecture 17 - Review Before Quiz - I

Lecture 18 - Friction - I

Lecture 19 - Friction - II

Lecture 20 - Friction - III

Lecture 21 - Particle Dynamics

Lecture 22 - Circular Motion

Lecture 23 - Absolute Motion

Lecture 24 - Relative Motion - I

Lecture 25 - Relative Motion - II

Lecture 26 - Relative Motion - III and Instantaneous Center

Lecture 27 - Rotating frame of reference I - Velocity

Lecture 28 - Rotating frame of reference II - Acceleration

Lecture 29 - Rotating frame of reference III - Choice of rotating frame of reference

Lecture 30 - RFR- IV Crank and slotted bar

Lecture 31 - RFR-V Understanding Coriolis Acceleration

Lecture 32 - Kinetics - I

Lecture 33 - Kinetics - II

Lecture 34 - Kinetics - III

Lecture 35 - 3D Kinematics - I

Lecture 36 - 3D Kinematics - II

Lecture 37 - 3D Kinematics - III

NPTEL : NOC:Foundations of Computational Materials Modelling (Mechanical Engineering)

Co-ordinators : Dr.Narasimhan Swaminathan

Lecture 1 - Introduction to the course

Lecture 2 - Some applications of MD simulations

Lecture 3 - Introduction to Bravais lattices and constructing simple crystals with MATLAB

Lecture 4 - Introduction to symmetry - 1

Lecture 5 - Symmetry Elements - 1

Lecture 6 - Symmetry elements - 2

Lecture 7 - Plane groups and their Hermann-Maugin (HM) symbols

Lecture 8 - Glide reflection; Examples of writing point group symbols; Wyckoff positions

Lecture 9 - Generating 2D crystal with MATLAB using Bilbao crystallography website

Lecture 10 - Symmetry of space groups

Lecture 11 - Hernann maugin symbols of space groups

Lecture 12 - Translational symmetry operators

Lecture 13 - The Space groups

Lecture 14 - Generation of crystals

Lecture 15 - Generation of monoclinic lattice

Lecture 16 - Introduction to Statistical Mechanica - 1

Lecture 17 - Introduction to Statistical Mechanica - 2

Lecture 18 - Introduction to Statistical Mechanics - 3

Lecture 19 - Statistical mechanics - 1

Lecture 20 - Statistical mechanics - 2

Lecture 21 - Basic introduction to mechanics

Lecture 22 - Introduction to phase space

Lecture 23 - Introduction to phase average and time average

Lecture 24 - Canonical ensemble; Partition function

Lecture 25 - Basic introduction to MD

Lecture 26 - Input script for LAMMPS - 1

Lecture 27 - Input script for LAMMPS - 2

Lecture 28 - Input script for LAMMPS - 3

Lecture 29 - Input script for LAMMPS - 4

Lecture 30 - LAMMPS exercises - 1

Lecture 31 - LAMMPS exercises - 2

Lecture 32 - LAMMPS exercises - 3

Lecture 33 - LAMMPS exercises - 4

Lecture 34 - LAMMPS exercises - 5

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Fundamentals of Combustion for Propulsion (Mechanical Engineering)

Co-ordinators : Prof. S Varunkumar, Prof. H S Mukunda

Lecture 1 - Introduction

Lecture 2 - Combustion processes in ICE and Gas turbine engines

Lecture 3 - Combustion in solid and liquid rocket motors

Lecture 4 - Equilibrium

Lecture 5 - Chemical kinetics, Equilibrium vs rate controlled

Lecture 6 - Demonstration of NASA-CEA

Lecture 7 - Premixed and diffusion flames: principal features and differences - Part I

Lecture 8 - Premixed and diffusion flames: principal features and differences - Part II

Lecture 9 - Quenching, flammability and other limit phenomena

Lecture 10 - Conservation equations

Lecture 11 - Integral Analysis of flame

Lecture 12 - Solid propellant combustion

Lecture 13 - Erosive burning

Lecture 14 - Instability in solid rockets

Lecture 15 - Analysis of p-t traces - Part II

Lecture 16 - Statistical representation of composite propellants in HeQu1D - geometry and thermochemistry

Lecture 17 - HeQu1D model - Parameter estimation

Lecture 18 - Effects of Al - extended HeQu1D model

Lecture 19 - Instability in solid rockets - II

Lecture 20 - Tutorial

Lecture 21 - Liquid propellant rockets - Part I

Lecture 22 - Liquid propellant rockets - Part II

Lecture 23 - Combustion in liquid rockets

Lecture 24 - Instabilities in liquid rockets and gas turbine after burners

Lecture 25 - CFD modeling aspects - Fundamentals

Lecture 26 - CFD modeling aspects - Modeling appraches

Lecture 27 - Effect of turbulence on flames

Lecture 28 - Scramjets - Part I

Lecture 29 - Scramjets - Part II

Lecture 30 - Summary - Premixed flames

Lecture 31 - Summary - Non-premixed flames

Lecture 55 - Hydraulic Cylinders

Lecture 56 - Numericals on Fluid Power Actuators

Lecture 57 - Numericals on Fluid Power Actuators

Lecture 58 - Subsystems: Hydraulic Reservoir, Coolers and Filters

Lecture 59 - Subsystems: Hydraulic Reservoir, Coolers and Filters

Lecture 60 - Subsystems: Hydraulic Reservoir, Coolers and Filters

Lecture 61 - Subsystems: Hydraulic Fluids, Conduits and Simple Numericals

Lecture 62 - Subsystems: Hydraulic Fluids, Conduits and Simple Numericals

Lecture 63 - Subsystems: Hydraulic Fluids, Conduits and Simple Numericals

Lecture 64 - Subsystems: Hydraulic accumulators, Classifications, Applications, Accumulator physics, Maintenance, Numericals

Lecture 65 - Subsystems: Hydraulic accumulators, Classifications, Applications, Accumulator physics, Maintenance, Numericals

Lecture 66 - Subsystems: Hydraulic accumulators, Classifications, Applications, Accumulator physics, Maintenance, Numericals

Lecture 67 - Oil Hydraulic Circuits: Design and Analysis

Lecture 68 - Oil Hydraulic Circuits: Design and Analysis

Lecture 69 - Oil Hydraulic Circuits: Design and Analysis

Lecture 70 - Task Based Selection and Analysis of Oil Hydraulic Circuits

Lecture 71 - Task Based Selection and Analysis of Oil Hydraulic Circuits

Lecture 72 - Task Based Selection and Analysis of Oil Hydraulic Circuits

Lecture 73 - Task Based Selection and Analysis of Oil Hydraulic Circuits

Lecture 74 - Pneumatic Circuits: Design and Analysis

Lecture 75 - Pneumatic Circuits: Design and Analysis

Lecture 76 - Pneumatic Circuits: Design and Analysis

Lecture 77 - Pneumatic Circuits: Design and Analysis of Multiple Actuators

Lecture 78 - Pneumatic Circuits: Design and Analysis of Multiple Actuators

Lecture 79 - Pneumatic Circuits: Design and Analysis of Multiple Actuators

Lecture 80 - Pump-controlled Hydraulic Systems

Lecture 81 - Pump-controlled Hydraulic Systems

Lecture 82 - Pump-controlled Hydraulic Systems

Lecture 83 - Hydrostatic Transmissions

Lecture 84 - Hydrostatic Transmissions

Lecture 85 - Hydrostatic Transmissions

Lecture 86 - Proportional Valve Technology

Lecture 87 - Proportional Valve Technology

Lecture 88 - Proportional Valve Technology

Lecture 89 - Electro Hydraulic Servo Valve (EHSV)

Lecture 90 - Electro Hydraulic Servo Valve (EHSV)

Lecture 91 - Electro Hydraulic Servo Valve (EHSV)

Lecture 92 - Electro-Hydraulic Actuator (EHA)

Lecture 93 - Electro-Hydraulic Actuator (EHA)

Lecture 94 - Modeling and Simulation in Hydraulic Components

Lecture 95 - Modeling and Simulation in Hydraulic Components

Lecture 96 - Modeling and Simulation in Hydraulic Components

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Introduction to Turbomachines (Mechanical Engineering)

Co-ordinators : Prof. Babu Viswanathan

Lecture 1 - Introduction

Lecture 2 - Basic Theroy of Turbomachines - Part 1

Lecture 3 - Basic Theroy of Turbomachines - Part 2

Lecture 4 - Basic Theroy of Turbomachines - Part 3

Lecture 5 - Basic Theroy of Turbomachines - Part 4

Lecture 6 - Basic Theroy of Turbomachines - Part 5

Lecture 7 - Basic Theroy of Turbomachines - Part 6

Lecture 8 - Hydro Turbomachines - Centrifugal pumps - Part 1

Lecture 9 - Hydro Turbomachines - Centrifugal pumps - Part 2

Lecture 10 - Hydro Turbomachines - Centrifugal pumps - Part 3

Lecture 11 - Hydro Turbomachines - Centrifugal pumps - Part 4

Lecture 12 - Hydro Turbomachines - Francis turbine - Part 1

Lecture 13 - Hydro Turbomachines - Francis turbine - Part 2

Lecture 14 - Hydro Turbomachines - Kaplan turbine

Lecture 15 - Hydro Turbomachines - Pelton turbine

Lecture 16 - Positive Displacement Pumps - Gear pump

Lecture 17 - Thermal Turbomachines - Introduction

Lecture 18 - Thermal Turbomachines - Gas turbines

Lecture 19 - Thermal Turbomachines - Steam Turbines

Lecture 20 - Thermal Turbomachines - Part 1

Lecture 3 - Manufacturing Aspects, Selection and Classification

Lecture 4 - Description and Taxonomy of the Mfg. Processes

Lecture 5 - Metal Casting basics, Gating and Risering design

Lecture 6 - Evaporative Pattern Casting Process (EPC)

Lecture 7 - Continuous, Permanent mold, Centrifugal and Pressure Die Casting

Lecture 8 - Hybrid EPC Processes and Vacuum EPC Process

Lecture 9 - Set-up of VEPC and Investment Casting Processes

Lecture 10 - Ceramic Shell Investment Casting Process

Lecture 11 - Shell Molding Process

Lecture 12 - Abrasive Flow Machining

Lecture 13 - Mechanism of Material Removal in AFM and Variant processes in AFM

Lecture 14 - Abrasive Jet Machining (AJM)

Lecture 15 - Water Jet and Abrasive Water Jet Machining

Lecture 16 - Ultrasonic Machining Process (USM)

Lecture 17 - Mechanism, Processes Variants and applications of USM

Lecture 18 - Micro USM and advances in USM

Lecture 19 - Electric Discharge Machining (EDM) Process

Lecture 20 - Die-Sinker EDM and Wire Cut Electric Discharge Machining (WEDM)

Lecture 21 - Variant Processes in EDM

Lecture 22 - Electro Chemical Discharge Machining (ECDM)

Lecture 23 - Laser Beam Machining (LBM)

Lecture 24 - Equipment and Process Parameters in LBM

Lecture 25 - Electrochemical Machining (ECM)

Lecture 26 - ECM Kinematics and Tool Design

Lecture 27 - The Subsystems in ECM, advantages and applications

Lecture 28 - Variant Processes in ECM: ECG, ECH, ECDe and STEM

Lecture 29 - Electron Beam, Plasma Beam and Ion Beam Machining

Lecture 30 - Submerged Arc Welding (SAW)

Lecture 31 - Resistance Welding Process

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Solid State Welding processes

Lecture 33 - Friction Welding process

Lecture 34 - Electron Beam and Plasma Welding Processes

Lecture 35 - Laser Beam welding and Diffusion welding processes

Lecture 36 - High Energy Rate Forming Processes

Lecture 37 - Rapid Prototyping Technology (RPT)

Lecture 38 - Rapid Manufacturing, applications and advancements

Lecture 39 - Microwave Processing of Materials

Lecture 40 - Applications and new trends in Microwave Material Processing

NPTEL : Computational Fluid Dynamics (Dr. K.M. Singh) (Mechanical Engineering)

Co-ordinators : Dr. K.M. Singh

Lecture 1 - General Introduction: Historical Background and Spectrum of Applications

Lecture 2 - CFD: Simulation Process and Course Outline

Lecture 3 - Conservation Laws and Mathematical Preliminaries

Lecture 4 - Mass Conservation: Continuity Equation

Lecture 5 - Momentum Equation: Newtonâ€™s 2nd Law

Lecture 6 - Momentum Equation: Navier-Stokes Equations

Lecture 7 - Navier-Stokes Equation and its Simplified Forms

Lecture 8 - Energy and Scalar Transport Equations

Lecture 9 - Scalar Transport, Mathematical Classification and Boundary Conditions

Lecture 10 - Finite Difference Method: Methodology and Grid Notation

Lecture 11 - Finite Difference Approximation of First Order Derivatives

Lecture 12 - Finite Difference Approximation of Second Order Derivatives - 1

Lecture 13 - Finite Difference Approximation of Second Order Derivatives - 2

Lecture 14 - Approximation of Mixed Derivatives and Multi-Dimensional F.D. Formulae

Lecture 15 - Implementation of Boundary Conditions and Finite Difference Algebraic System

Lecture 16 - Applications of FDM to Scalar Transport Problems - 1

Lecture 17 - Applications of FDM to Scalar Transport Problems - 2

Lecture 18 - Application of FDM to Advection-Diffusion and Computer Implementation Aspects

Lecture 19 - Computer Implementation of FDM for Steady State Heat Diffusion Problems - 1

Lecture 20 - Computer Implementation of FDM for Steady State Heat Diffusion Problems - 2

Lecture 21 - Computer Implementation of FDM for Steady State Heat Diffusion Problems - 3

Lecture 22 - Solution of Discrete Algebraic Systems

Lecture 23 - Direct and Basic Iterative Methods for Linear Systems

Lecture 24 - Accelerated Iterative Methods for Linear Systems

Lecture 25 - Two Level and Multi-Level Methods for First Order IVPs - 1

Lecture 26 - Two Level and Multi-Level Methods for First Order IVPs - 2

Lecture 27 - Application to Unsteady Transport Problems

Lecture 28 - Introduction to Finite Volume Method

Lecture 29 - Finite Volume Interpolation Schemes

Lecture 30 - Application of FVM to Scalar Transport

Lecture 31 - Introduction to Finite Element Method

Lecture 32 - Finite Element Shape Functions and Numerical Integration - 1

Lecture 33 - Finite Element Shape Functions and Numerical Integration - 2

Lecture 34 - Application of FEM to Scalar Transport

Lecture 35 - Special Features of Navier-Stokes Equations

Lecture 36 - Time Integration Techniques for Navier-Stokes Equations

Lecture 37 - Implicit Pressure Correction Methods

Lecture 38 - SIMPLEC, SIMPLER and Fractional Step Methods

Lecture 39 - Turbulent Flows: Features and Simulation Strategies

Lecture 40 - Reynolds Averaging and RANS Simulation Models

Lecture 41 - RANS Turbulence Models and Large Eddy Simulation

Lecture 42 - Introduction to Grid Generation

Lecture 43 - Aspects of Practical CFD Analysis

NPTEL : Metal Casting (Mechanical Engineering)

Co-ordinators : Dr. D. B. Karunakar

Lecture 1 - Introduction

Lecture 2 - Overview of different casting processes - 1

Lecture 3 - Overview of different casting processes - 2

Lecture 4 - Overview of different casting processes - 3

Lecture 5 - Terminology and Tools of Sand Moulding

Lecture 6 - Moulding Sands and Design - 1

Lecture 7 - Moulding Sands and Design - 2

Lecture 8 - Moulding Sands Properties

Lecture 9 - Moulding Sand Properties Testing

Lecture 10 - Cores and Core Sands

Lecture 11 - Patterns and Allowances

Lecture 12 - Steps Involved in Making a Sand Casting

Lecture 13 - Design of Risering System - 1

Lecture 14 - Design of Risering System - 2

Lecture 15 - Design of Risering System - 3

Lecture 16 - Design of Risering System - 4

Lecture 17 - Design of Risering System - 5

Lecture 18 - Design of Gating System - 1

Lecture 19 - Design of Gating System - 2

Lecture 20 - Sand Casting Defects - 1

Lecture 21 - Sand Casting Defects - 2

Lecture 22 - Melting Furnaces and Practice

Lecture 23 - Treatment of Molten Metal

Lecture 24 - Fluidity of Molten Metal

Lecture 25 - Solidification

Lecture 26 - Cast Irons and Steels

Lecture 27 - Aluminum and Magnesium Cast Alloys

Lecture 28 - Copper, Zinc and Titanium Cast Alloys

Lecture 29 - Die Casting Process - I

Lecture 30 - Die Casting Process - II

Lecture 31 - Investment Casting Process - I

Lecture 32 - Investment Casting Process - II

Lecture 33 - Continuous Casting Process

Lecture 34 - Centrifugal Casting Process

Lecture 35 - Evaporative Pattern Casting and Plaster Moulding

Lecture 36 - Vacuum Sealed Moulding and Squeeze Casting

Lecture 37 - Shakeout, Fettling and Finishing

Lecture 38 - Inspection, Testing and Quality Control

Lecture 39 - Design Consideration and Economics

Lecture 40 - Environment, Health and Safety Aspects

NPTEL : Processing of non metals (Mechanical Engineering)

Co-ordinators : Dr. Inderdeep Singh

Lecture 1 - Engineering Materials and Processing Techniques: Introduction

Lecture 2 - Properties of Non-Metals

Lecture 3 - Glass Structure and Properties

Lecture 4 - Glass Processing - I

Lecture 5 - Glass Processing - II

Lecture 6 - Ceramics - I

Lecture 7 - Ceramics - II

Lecture 8 - Ceramic Powder Preparation

Lecture 9 - Ceramic Powder Preparation â€“ I

Lecture 10 - Processing of Ceramic Parts ? Pressing

Lecture 11 - Processing of Ceramic Parts â€“ II

Lecture 12 - Ceramics: Secondary Processing

Lecture 13 - Thermoplastics and Thermosets

Lecture 14 - Processing of Plastics

Lecture 15 - Extrusion of Plastics

Lecture 16 - Transfer Molding and Compression Molding

Lecture 17 - Injection Molding

Lecture 18 - Thermoforming

Lecture 19 - Rotational Molding and Blow Molding

Lecture 20 - Composite Materials

Lecture 21 - Composite Materials: Classification and Applications

Lecture 22 - Processing of Polymer Matrix Composites

Lecture 23 - Hand Lay-up and Spray Lay-up

Lecture 24 - Pultrusion

Lecture 25 - Compression Molding

Lecture 26 - Filament Winding

Lecture 27 - Injection Molding-1

Lecture 28 - Pre-pregging and Sheet Molding Compounds

Lecture 29 - Resin Transfer Molding and Autoclave Molding

Lecture 30 - Ceramic Matrix Composites

Lecture 31 - Ceramic Matrix Composites: Fundamentals and Properties

Lecture 32 - Powder Processing: Ceramic Matrix Composites

Lecture 33 - Chemical Vapour Infiltration

Lecture 34 - Ceramic Matrix Composites: Processing-1

Lecture 35 - Ceramic Matrix Composites: Post Processing

Lecture 36 - Drilling of Polymer Matrix Composites

Lecture 37 - Hole Making Techniques for Polymer Matrix Composites

Lecture 38 - Joining of Polymer Matrix Composites

Lecture 39 - Microwave Joining of Polymer Matrix Composites

Lecture 40 - Research Tools for Secondary Processing

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Vibration control (Mechanical Engineering)

Co-ordinators : Dr. S. P. Harsha

Lecture 1 - Basics of Vibrations for Simple Mechanical Systems

Lecture 2 - Introduction to Damping in Free and Force Vibrations

Lecture 3 - Free and Forced Vibrations of Two Degree of Systems

Lecture 4 - Multi Degree of Freedom Systems

Lecture 5 - Reduction at source - 1

Lecture 6 - Reduction at source - 2

Lecture 7 - Reduction at source - 3

Lecture 8 - Feedback Control System - 1

Lecture 9 - Shunt Damping

Lecture 10 - Vibration Isolation - 1

Lecture 11 - Vibration Isolation - 2

Lecture 12 - Vibration Isolation - 3

Lecture 13 - Source Classification

Lecture 14 - Self Excitation Vibration

Lecture 15 - Flow Induction Vibration

Lecture 16 - Field Balancing of Rigid / Flexible Rotors

Lecture 17 - Damping: Models and Measures - I

Lecture 18 - Damping: Models and Measures - II

Lecture 19 - Numerical Problems

Lecture 20 - Design Sensitivity - I

Lecture 21 - Design Specification

Lecture 22 - Design for Enhanced Material Damping

Lecture 23 - Basics of Passive Vibration Control

Lecture 24 - Design of Absorber

Lecture 25 - Shock Absorber

Lecture 26 - Isolators with Stiffness and Damping

Lecture 27 - Basics of Active Vibration Control

Lecture 28 - Piezoelectric Material - I

Lecture 29 - Piezoelectric Material - II: Applications

Lecture 30 - Piezoelectric Accelerometers

Lecture 31 - Electro-rheological (ER) Fluids

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Magneto-rheological (MR) Fluids

Lecture 33 - Magneto and Electrostrictive Materials

Lecture 34 - Shape Memory Alloy

Lecture 35 - Electro-Magnetics

Lecture 36 - Numerical Problems

Lecture 37 - Basics of Vibration Measurement System

Lecture 38 - Data Acquisition

Lecture 39 - Fourier Transformation

Lecture 40 - Filters

NPTEL : Welding Engineering (Mechanical Engineering)

Co-ordinators : Dr. D.K. Dwivedi

Lecture 1 - Introduction to Welding Engineering

Lecture 2 - Classification of Welding Processes - I

Lecture 3 - Classification of Welding Processes - II

Lecture 4 - Sources of Heat and Protection of Weld pool

Lecture 5 - Protection of Weld Pool

Lecture 6 - Introduction

Lecture 7 - Fundamentals of Arc Initiation

Lecture 8 - Arc Maintenance & Arc Characteristics

Lecture 9 - Arc Forces

Lecture 10 - Arc Efficiency

Lecture 11 - Melting Rate in Different Welding Processes

Lecture 12 - Types of power sources and their characteristics - I

Lecture 13 - Types of power sources and their characteristics - II

Lecture 14 - SMAW - I

Lecture 15 - SMAW - II

Lecture 16 - GTAW - I

Lecture 17 - GTAW - II

Lecture 18 - PAW & SAW

Lecture 19 - SAW

Lecture 20 - GMAW

Lecture 21 - Brazing, Soldering & Braze Welding

Lecture 22 - Braze welding and Electroslag welding

Lecture 23 - Weld Thermal Cycle

Lecture 24 - Effect of WTC and Cooling rate in welding

Lecture 25 - Cooling rate

Lecture 26 - Peak temperature & Solidification rate

Lecture 27 - Residual stress - I

Lecture 28 - Residual stress - II

Lecture 29 - Introduction

Lecture 30 - Type of joints and welds

Lecture 31 - Edge preparation

Lecture 32 - Design for static and fatigue loading

Lecture 33 - Fatigue fracture of weld joints - I

Lecture 34 - Fatigue fracture of weld joints - II

Lecture 35 - Introduction-

Lecture 36 - DT & NDT

Lecture 37 - Understanding Weldability

Lecture 38 - Reactions in weldment

Lecture 39 - Weldability of Al alloys

Lecture 40 - Failure analysis and prevention

NPTEL : Industrial Engineering (Mechanical Engineering)

Co-ordinators : Prof. P.K. Jain, Dr. Pradeep Kumar, Dr. Inderdeep Singh, Dr. D.K. Dwivedi

Lecture 1 - Production Planning and Control

Lecture 2 - Product Design and Development

Lecture 3 - Statistical Process Control - Part I

Lecture 4 - Statistical Process Control - Part II

Lecture 5 - Statistical Process Control - Part III

Lecture 6 - Productivity

Lecture 7 - Factors Affecting the Productivity

Lecture 8 - Improving the Productivity Introduction to Work Study

Lecture 9 - Work Study Human Component and Method Study

Lecture 10 - Recording Techniques for Method Study - Part I

NPTEL : NOC:Engineering Economic Analysis (Mechanical Engineering)

Co-ordinators : Dr. Pradeep K. Jha

Lecture 1 - Introduction to Engineering Economy, Physical and Economic Environment, Phases in Engg. process

Lecture 2 - Some economic concepts, Value and utility, Interest and Interest rate, Time value of money

Lecture 3 - Interest formulas: Simple and compound interest, Cash flow diagrams

Lecture 4 - Interest formulas for discrete compounding and discrete payments: Single payment (CAF and PWF)

Lecture 5 - Interest formulas for discrete compounding and discrete payments: Equal payment series (CAF, CRF and PWF)

Lecture 6 - Problem solving on discrete compounding, discrete payment

Lecture 7 - Interest formulas for Uniform gradient series

Lecture 8 - Interest formulas for geometric gradient series

Lecture 9 - Compounding frequency of Interest: Nominal and Effective interest rates

Lecture 10 - Problem solving on frequency compounding of interest and gradient series factors

Lecture 11 - Economic equivalence: Meaning and principles of equivalence

Lecture 12 - Equivalence calculations involving cash flows

Lecture 13 - Methods of comparison of alternatives: Present worth, Annual equivalent, Future worth, Internal rate of return

Lecture 14 - comparison of alternatives: Capitalized equivalent amount, Capital recovery with return

Lecture 15 - Problem solving on equivalence and comparison of alternatives

Lecture 16 - Replacement analysis: Reason, Concept of defender and challenger

Lecture 17 - Proper treatment of sunk cost in replacement

Lecture 18 - Replacement because of improved efficiency, inadequacy, demand etc.

Lecture 19 - Problem solving on replacement analysis

Lecture 20 - Economic life of the asset

Lecture 21 - Depreciation: Definition, Reasons, Types of property, Value time function and book value

Lecture 22 - Basic depreciation methods:S-L method, Declining balance method

Lecture 23 - Depreciation: Declining balance switching to S-L, SOYD Method

Lecture 24 - Modified accelerated cost recovery system (MACRS) method of depreciation, Depletion

Lecture 25 - Depreciation: Units of production method, Depletion

Lecture 26 - Problem solving based on Depreciation and Depletion

Lecture 27 - Elements of cost: types of cost

Lecture 28 - Breakeven analysis, Effect of fixed and variable cost on BEP.

Lecture 29 - Economic order quantity

Lecture 30 - Problem solving based on Breakeven analysis and EOQ

Lecture 31 - Cost estimation: Methods of cost estimation, Adjustment of data, Learning

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - cost estimating relationships

Lecture 33 - Introduction to decision under risk Criteria for decision under risk

Lecture 34 - Expected value decision making under risk

Lecture 35 - Expected variance decision making under risk

Lecture 36 - Problem solving based on decision under risk

Lecture 37 - Income taxes: Principles and calculation of effective income tax rates

Lecture 38 - Effect of method of depreciation on income taxes

Lecture 39 - After tax economic analysis

Lecture 40 - Problem solving based on Income tax analysis

Lecture 9 - Examples: Equilibrium of rigid bodies in three dimensions

Lecture 10 - Examples: Beams and distributed loads

Lecture 11 - Flexible Cable

Lecture 12 - Flexible Cable, Catenary curve

Lecture 13 - Examples: Parabolic and Catenary cables

Lecture 14 - Flexible Cable: Concentrated load

Lecture 15 - Structures: Plane Trusses

Lecture 16 - Analysis of trusses: Method of joints

Lecture 17 - Analysis of trusses: Method of sections

Lecture 18 - Shear force and bending moment

Lecture 19 - Shear force and bending moment: distributed load

Lecture 20 - Principle of virtual work

Lecture 21 - Principle of virtual work: examples - I

Lecture 22 - Principle of virtual work: examples - II

Lecture 23 - Stable and unstable equilibrium

Lecture 24 - Friction

Lecture 25 - Friction: examples

Lecture 26 - Rope and belt friction

Lecture 27 - Rope and belt friction: examples

Lecture 28 - Rolling resistance

Lecture 29 - Revision: static

Lecture 30 - Coordinate systems: Cartesian and planar polar coordinates

Lecture 31 - Coordinate systems: spherical coordinates

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Coordinate systems: cylindrical coordinates

Lecture 33 - Cartesian and planar polar coordinates: examples

Lecture 34 - Spherical and cylindrical coordinates: examples

Lecture 35 - Equation of motion in different coordinate systems

Lecture 36 - Equation of motion: examples

Lecture 37 - Work energy method

Lecture 38 - Work energy method: examples

Lecture 39 - Impulse momentum relation

Lecture 40 - Variable mass

Lecture 41 - Direct central impact

Lecture 42 - Oblique central impact

Lecture 43 - Moment of inertia

Lecture 44 - Moment of inertia: examples

Lecture 45 - Moment of inertia of composite bodies

Lecture 46 - Product of inertia and principal axes of inertia

Lecture 47 - Principal axes of inertia: examples - I

Lecture 48 - Principal axes of inertia: examples - II

Lecture 49 - Harmonic oscillator: simple harmonic motion

Lecture 50 - Simple harmonic motion: examples

Lecture 51 - Damped harmonic oscillator

Lecture 52 - Translation and rotation of rigid bodies

Lecture 53 - Translation and rotation of rigid bodies: examples

Lecture 54 - Plane motion of a rigid body

Lecture 55 - Plane motion of a rigid body: work energy equation

Lecture 56 - Plane motion of a rigid body: impulse-momentum equation

Lecture 57 - Three-dimensional dynamics of rigid bodies: angular momentum

Lecture 58 - Eulerâ€™s equations of motion

Lecture 59 - Eulerâ€™s equations of motion: examples

Lecture 60 - Revision: Dynamics

NPTEL : NOC:Noise Control in Mechanical Systems (Mechanical Engineering)

Lecture 17 - The 2-D structural-acoustic waveguide

Lecture 18 - The coupled partial differential equations

Lecture 19 - Derivation of the coupled dispersion equation

Lecture 20 - A schematic of coupled waves

Lecture 21 - Derivation of coupled waves using asymptotic method

Lecture 22 - Asymptotic method (Continued...) and Maple demo

Lecture 23 - Physics of the coupled waves

Lecture 24 - Critical points

Lecture 25 - Heavy fluid loading

Lecture 26 - Summary of the rectangular waveguide

Lecture 27 - Impedance and mobility

Lecture 28 - Derivation of acoustic and vibration response

Lecture 29 - Derivation of vibro-acoustic response (Continued...)

Lecture 30 - Derivation of vibro-acoustic response (Continued...)

Lecture 31 - Numerical example

Lecture 32 - Coupled resonance analysis using matrices

Lecture 33 - Coupled resonance analysis (Continued...)

Lecture 34 - Sound radiation from a baffled panel

Lecture 35 - Derivation of pressure response.

Lecture 36 - Radiation efficiency

Lecture 37 - Physics of volume velocity cancellation

Lecture 38 - Derivations in the frequency domain: 1-D

Lecture 39 - Physics of the vibration spectrum in 2-D

Lecture 40 - Modal character across the frequency range

Lecture 41 - Simultaneous radiation from several modes

Lecture 42 - Panel radiation model using monopoles

Lecture 43 - Physics of panel radiation using monopole model

Lecture 44 - Physics of panel radiation using monopole model (Cointinued...)

Lecture 45 - Radiation resistance derivation from Maidanikâ€™s work (Continued...)

Lecture 46 - Radiation resistance derivation from Maidanikâ€™s work (Continued...)

Lecture 47 - Radiation resistance derivation from Maidanikâ€™s work (Continued...)

Lecture 48 - Modal average radiation efficiency

Lecture 49 - Modal average radiation efficiency (Cointinued...)

Lecture 50 - Transmission of sound through a rigid panel with flexible mounts

Lecture 51 - Frequency dependence of sound transmission

Lecture 52 - Sound transmission through a flexible partition

Lecture 53 - Transmission loss in different situations

Lecture 54 - Cylindrical shell vibration

Lecture 55 - Behavior of uncoupled shell waves

Lecture 56 - Fluid waves in rigid-walled cylindrical shells

Lecture 57 - Wave propagation characteristics in flexible cylindrical shells carrying fluid: Fullers paper

Lecture 58 - Wave impedance of an infinite plate: fluid loading

Lecture 59 - Fluid loading in a finite plate

Lecture 60 - Summary of the entire course

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Vibrations of Plates and Shells (Mechanical Engineering)

Co-ordinators : Prof. Venkata R. Sonti

Lecture 1 - Introduction to differential geometry

Lecture 2 - Properties of surfaces: First fundamental form

Lecture 3 - Properties of surfaces: Second fundamental form

Lecture 4 - Surfaces of revolution

Lecture 5 - Gauss Codazzi relations

Lecture 6 - Gauss Codazzi (Continued...)

Lecture 7 - Differential element length in a thin shell

Lecture 8 - Strain of a differential element

Lecture 9 - Explicit strain expressions

Lecture 10 - Love simplifications and inconsistencies Of the theory

Lecture 11 - Euler Bernoulli Beam equation using the Hamilton's Law

Lecture 12 - Euler Bernoulli Beam and Hamilton's Law (Continued...)

Lecture 13 - Beta definition, force and moment resultants

Lecture 14 - Hamilton's Law for a general shell

Lecture 15 - The Hamilton's law (Continued...)

Lecture 16 - Final Dynamical Equations and boundary conditions

Lecture 17 - Physics of each term in the dynamic equations

Lecture 18 - Physics of each term (Continued...)

Lecture 19 - The sixth equation of motion

Lecture 20 - The sixth equation of motion (Continued...)

Lecture 21 - Equations of motion for a rectangular plate using Hamilton's law

Lecture 22 - Equations of motion for a rectangular Plate (Continued...)

Lecture 23 - Rectangular plate boundary conditions

Lecture 24 - Rectangular plate equation using force balance

Lecture 25 - Modeshapes and resonances of a vibrating beam

Lecture 26 - Modeshapes and resonances of a vibrating Rectangular plate

Lecture 27 - Modeshapes and resonances of a vibrating Circular plate

Lecture 28 - Vibrating circular plate (Continued...)

Lecture 29 - Modeshapes and resonances of a vibrating Circular ring

Lecture 30 - Details of vibrating rings

Lecture 31 - Insights into vibrations of ring

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Cylindrical shell equations of motion using Force balance

Lecture 33 - Cylindrical shell: Transverse equation of motion

Lecture 34 - Orthogonality of modeshapes

Lecture 35 - Orthogonality of Modes (Continued...)

Lecture 36 - The Rayleigh Quotient

Lecture 37 - Rayleigh Quotient Example: Simply-supported beam

Lecture 38 - The Rayleigh Ritz method

Lecture 39 - The Rayleigh Ritz method applied to a Complicated system

Lecture 40 - The Lagrange Multiplier method

Lecture 41 - The penalty method

Lecture 42 - Orthogonal polynomials of RB Bhat

Lecture 43 - Rayleigh Ritz paper by RB Bhat

Lecture 44 - Numerical examples of the Rayleigh Ritz method

Lecture 45 - Numerical examples of Rayleigh Ritz method And animations

Lecture 46 - Raylegh Ritz applied to curved structures

Lecture 47 - Forced response of plates and shells

Lecture 48 - Forced response (Continued...)

Lecture 49 - Simply-supported plate response to various forces

Lecture 50 - Simply-supported plate response to various Forces (Continued...)

Lecture 51 - Simply-supported cylindrical shell response to a Point harmonic force

Lecture 52 - Cylindrical shell response (Continued...)

Lecture 53 - Cylindrical shell response (Continued...)

Lecture 54 - Cylindrical shell response to a traveling load using Only transverse modes

Lecture 55 - The Receptance method

Lecture 56 - The receptance method (Continued...)

Lecture 57 - Stiffening a cylindrical shell using rings

Lecture 58 - Stiffening of a cylindrical shell (Continued...)

Lecture 59 - Damping in structures

Lecture 60 - Loss factor and Complex Young modulus

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Dynamics and Control of Mechanical Systems (Mechanical Engineering)

Co-ordinators : Prof. Ashitava Ghosal

Lecture 1 - Introduction to Course

Lecture 2 - Position and Orientation of a Rigid Body

Lecture 3 - Homogenous Transformation

Lecture 4 - Linear and angular velocity of rigid body

Lecture 5 - Motion of Rigid Body and Particles

Lecture 6 - Introduction to multi-body systems

Lecture 7 - Joints, Degrees of Freedom and Constraints

Lecture 8 - Position, Velocity and Acceleration in Multi-body Systems

Lecture 9 - Mass and Inertia of a Rigid Body

Lecture 10 - External forces and moments

Lecture 11 - Angular momentum, Spinning tops and Gyroscopes

Lecture 12 - Free-body diagram and Equations of motion

Lecture 13 - Newton-Euler Formulation for Serial Chains

Lecture 14 - Lagrangian Formulation

Lecture 15 - Examples of Equations of Motion

Lecture 16 - Equations of Motion Using Computer Tools

Lecture 17 - Introduction and Examples of equations of motion

Lecture 18 - Inverse dynamics and Simulations of equations Of motion

Lecture 19 - Simulation using Computer Tools

Lecture 20 - Introduction and Goal of control

Lecture 21 - State Space Formulation

Lecture 22 - Solution of State Equations

Lecture 23 - Stability of Dynamical Systems

Lecture 24 - Controllability and Observability of Linear Systems

Lecture 25 - Examples of Controllability and Observability

Lecture 26 - Introduction to Classical Control

Lecture 27 - Root Locus

Lecture 28 - Frequency Domain Approach

Lecture 29 - PID Control

Lecture 30 - Root Locus based Controller Design

Lecture 31 - State Space Design

Lecture 32 - 3 Case Studies

NPTEL : NOC:Optical Methods for Solid and Fluid Mechanics (Mechanical Engineering)

Co-ordinators : Prof. Aloke Kumar, Prof. Koushik Viswanathan

Lecture 1 - Introduction

Lecture 2 - Mathematical Preliminaries - I

Lecture 3 - Tensors and Deformations

Lecture 4 - Lagrangian and Eulerian Perspectives

Lecture 5 - Mathematical Preliminaries - II

Lecture 6 - Image Processing Preliminaries

Lecture 7 - Image Processing Operations

Lecture 8 - Light Matter Interaction - I

Lecture 9 - Lab Demo I: Optical Microscope

Lecture 10 - Optical System: Lenses

Lecture 11 - Lab Demo II: Lenses and Camera

Lecture 12 - Light Matter Interaction - II (Lab Demostration)

Lecture 13 - Light Matter Interaction - II (Lab Demostration)

Lecture 14 - Tracer Particles for Flow Visualisation

Lecture 15 - Particle Tracking Velocimetry

Lecture 16 - Particle Image Velocimetry - I

Lecture 17 - Particle Image Velocimetry - II

Lecture 18 - Particle Image Velocimetry - III

Lecture 19 - Particle Image Velocimetry - IV

Lecture 20 - Particle Image Velocimetry - V

Lecture 21 - Particle Image Velocimetry - VI

Lecture 22 - Schlieren and Shadowgraphy

Lecture 23 - Lab Demo III: PIV and Schlieren

Lecture 24 - Introduction to optical methods for solids

Lecture 25 - Basics of Digital Image Correlation

Lecture 26 - Iterative implementation of DIC

Lecture 27 - Example implementations

Lecture 28 - How is a DIC experiment set up ?

Lecture 29 - DIY(C)!

Lecture 30 - Introduction to Photoelasticity

Lecture 31 - Why do we see fringes ?

Lecture 32 - How does light interact with matter ?

Lecture 33 - Origin of Birefringence

Lecture 34 - Loaded sample in a polarizer

Lecture 35 - Stress-induced birefringence

Lecture 36 - Analyses of optical paths using matrix methods

Lecture 37 - Putting it all together

Lecture 38 - What is tomography ?

Lecture 39 - Signal processing and Fourier methods

Lecture 40 - Rays and the Radon transforms

Lecture 41 - Geometric interpretations

Lecture 42 - The inverse problem: From Radon transform to 2D cross-section

Lecture 43 - Cone beams, parallel beams and the Feldkamp algorithm

NPTEL : NOC:Statistical Thermodynamics for Engineers (Mechanical Engineering)

Co-ordinators : Prof. Saptarshi Basu

Lecture 1 - Introduction to Statistical Thermodynamics

Lecture 2 - Basic Probability Theory and Statistics

Lecture 3 - Important Probability Distributions

Lecture 4 - Combinatorial Analysis for Statistical Thermodynamics

Lecture 5 - Basic Concepts

Lecture 6 - Macrostates and Microstates

Lecture 7 - Bose Einstein and Fermi Dirac Statistics

Lecture 8 - Entropy and the equilibrium particle distribution

Lecture 9 - Operator Theory - 1

Lecture 10 - Stirling Approximation and Lagrange Multipliers

Lecture 11 - Equilibrium particle distribution

Lecture 12 - The Dilute Limit and Concept of Molecular Partition Function

Lecture 13 - The Molecular Partition Function and its relationship with Classical Thermodynamics

Lecture 14 - Historical Survey of Quantum Mechanics

Lecture 15 - Operator Theory - 2

Lecture 16 - Operator Theory - 3

Lecture 17 - Bohr Model for the Spectrum of Atomic Hydrogen

Lecture 18 - Heuristic Introduction to the Schrodinger Equation

Lecture 19 - The postulates of Quantum Mechanics

Lecture 20 - The Steady State Schrodinger Equation: Single Particle Analysis

Lecture 21 - Coordinate System - 1

Lecture 22 - Coordinate System - 2

Lecture 23 - Coordinate System - 3

Lecture 24 - The Steady State Schrodinger Equation: Multiparticle analysis

Lecture 25 - The Particle in a Box

Lecture 26 - The Uncertainity Principle

Lecture 27 - The Pauli Exclusion and the Correspondence Principle

Lecture 28 - Problem Solving - 1

Lecture 29 - Problem Solving - 2

Lecture 30 - The Internal Motion for a two particle system

Lecture 31 - The rotational and vibrational energy mode for a diatomic molecule

Lecture 32 - Hermite polynomials as vibrational energy mode solution

Lecture 33 - Equivalent two body model of atomic hydrogen

Lecture 34 - The Electronic Energy Mode for Atomic Hydrogen

Lecture 35 - Problem Solving - 3

Lecture 36 - The four quantum numbers and multielectron systems

Lecture 37 - Spectroscopic term symbols for multielectron atoms

Lecture 38 - Electron energies for multielectron systems

Lecture 39 - Combined energy modes for atoms and diatomic molecules

Lecture 40 - Perturbation analysis of the Schrodinger Wave equation

Lecture 41 - Selection rules

Lecture 42 - The Rotational and vibrational spectroscopy

Lecture 43 - Ro-vibrational spectroscopy (Simplex model)

Lecture 44 - Rotation vibration coupling (Complex model)

Lecture 45 - Ro-vibrational spectroscopy (Complex model)

Lecture 46 - Ro-vibronic spectroscopy

Lecture 47 - Working with Spectroscopic Schemes, Notations and Term Symbols

Lecture 48 - From Particles to assembly - I

Lecture 49 - From Particles to assembly - II

Lecture 50 - Connecting Quantum Mechanics to Classical Mechanics

Lecture 51 - The Equipartition principle and ideal gas

Lecture 52 - Thermodynamic properties of ideal monoatomic and diatomic gas

Lecture 53 - The zero of energy (rotational and vibrational)

Lecture 54 - Specific heats, Internal energy through Vibrational and Ro-vibrational energy modes

Lecture 55 - The Ro-vibrational partition function and Introduction to intersction of Radiationand Matter

Lecture 56 - Absorption and Emission of Radiation

Lecture 57 - The Rabi frequency and Beer's Law

Lecture 58 - Insights into radiative spectral transitions

Lecture 59 - Theory of Absoprtion Spectroscopy

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Fundamentals of Acoustics (2024) (Mechanical Engineering)

Co-ordinators : Prof. Venkata R. Sonti

Lecture 1 - The vibrating spring-mass-damper system

Lecture 2 - Power calculations in a vibrating spring-mass-damper system

Lecture 3 - Wave propagation on a string

Lecture 4 - Examples of waves on strings: finite and semi-infinite cases

Lecture 5 - General solution to 1-D wave equation: physical insights

Lecture 6 - Wave solution: real notation vs complex notation

Lecture 7 - The vibrating string with a general mechanical impedance

Lecture 8 - The forced finite string with an end mass

Lecture 9 - The one-D wave solution: physical insights

Lecture 10 - Longitudinal wave propagation in a rod

Lecture 11 - Forced semi-infinite and finite rods

Lecture 12 - The derivation of the acoustic wave equation

Lecture 13 - The derivation of the acoustic wave equation (Continued...)

Lecture 14 - The derivation of the acoustic wave equation (Continued...)

Lecture 15 - The derivation of the acoustic wave equation (Continued...)

Lecture 16 - Sound propagation in piston driven semi-infinite and finite ducts

Lecture 17 - Acoustics inside a piston driven finite duct with a general end impedance

Lecture 18 - Time averaged power in a 1-D acoustic wave

Lecture 19 - The Free Space Green Function in acoustics

Lecture 20 - The Free Space Green Function (Continued...)

Lecture 21 - Various Green Functions and their uses

Lecture 22 - Derivation of the interior Kirchhoff Helmholtz Integral Equation

Lecture 23 - Derivation of the exterior Kirchhoff Helmholtz Integral Equation

Lecture 24 - Acoustic wave equation in spherical coordinates

Lecture 25 - Legendre polynomials, spherical harmonics, orthogonality relations

Lecture 26 - Spherical harmonics, Legendre polynomials and their orthogonality relations (Continued...)

Lecture 27 - Interior Neumann Green function

Lecture 28 - Exterior Neumann and Dirichlet Green functions

Lecture 29 - Pulsating sphere using the exterior Neumann Green function

Lecture 30 - Equivalence of Neumann Green function and separation of variables solution

Lecture 31 - Sound from a pulsating sphere using boundary matching technique

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Sound from a pulsating sphere using boundary matching technique (Continued...)

Lecture 33 - Sound radiation from a spherical cap on a rigid sphere using the Neumann Green function

Lecture 34 - Scattering of a plane acoustic wave from a rigid sphere

Lecture 35 - Example to show that the surface in the KHIE is notional (not actual)

Lecture 36 - The Rayleigh Integral

Lecture 37 - Sound field of an oscillating piston in a rigid baffle

Lecture 38 - Sound field of an oscillating piston in a rigid baffle (Continued...)

Lecture 39 - Physics of the sound field of an oscillating piston in a rigid baffle

Lecture 40 - Physics of the sound field of an oscillating piston in a rigid baffle (Continued...)

Lecture 41 - Physics of the sound field of the oscillating piston (cap) on a rigid sphere

Lecture 42 - The Sommerfeld radiation condition

Lecture 43 - Sound field inside a rigid walled box due to initial conditions

Lecture 44 - Sound field inside a rigid walled box due to a harmonic source

Lecture 45 - Sound field inside a rigid walled hollow cylinder due to initial conditions

Lecture 46 - Modeshape visualization inside a rigid walled cylinder

Lecture 47 - Sound field inside a rigid walled hollow cylinder due to initial conditions (Continued...)

Lecture 48 - Green function inside a rigid walled cylinder

Lecture 49 - Measures of sound

Lecture 50 - Measures of sound (Continued...)

Lecture 51 - Average mean square value of different frequency sinusoids

Lecture 52 - Frequency analysis of sounds in terms of third octave bands

Lecture 53 - Transient solution of the wave equation using Fourier series

Lecture 54 - Total soln of harmonically forced wave equation with initial conditions using Fourier series

Lecture 55 - Total soln of forced wave eqn with initial conditns using Laplace transform and Fourierseries

Lecture 56 - Branched systems, Helmholtz resonator

Lecture 57 - The radiation impedance and acoustic power

Lecture 58 - Acoustic potential, combined systems, special techniques for solving acoustic wave equation

Lecture 59 - Why do we take the real value of the solution in acoustic wave problems

Lecture 60 - Course summary - Part 1

Lecture 61 - Course summary - Part 2

Lecture 73 - Hypothesis Testing - VI

Lecture 74 - Graphical handling of data

Lecture 75 - Fitting and graphical handling of data: Introduction

Lecture 76 - Data transformable to linear

Lecture 77 - Data of known functional form

Lecture 78 - Calibration,Fitting, Hypotheses testing

Lecture 79 - Analysis of variance

Lecture 80 - Summary:Fittng and graphical handling of data

Lecture 81 - Regression Analysis - I

Lecture 82 - Regression Analysis - II

Lecture 83 - Regression Analysis - III

Lecture 84 - Regression Analysis - IV

Lecture 85 - Analysis of Variance - I

Lecture 86 - Analysis of Variance - II

Lecture 87 - Design of Experiment - I

Lecture 88 - Design of Experiment - II

Lecture 89 - Design of Experiment - III

Lecture 90 - Design of Experiment - IV

Lecture 91 - Summary of the course

Lecture 92 - Case studies: Introduction

Lecture 93 - Case study 1: Data smoothing - I

Lecture 94 - Case study 1: Data smoothing - II

Lecture 95 - Case study 2: Error analysis

Lecture 96 - Case study 3: Calibration

Lecture 97 - Case study 4: Design of experiment

Lecture 98 - Case study 5: Hypothesis testing

Lecture 99 - Course summary

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Aqueous Corrosion and its Control (Metallurgy and Material Science)

Co-ordinators : Prof. V. S. Raja

Lecture 1 - Introduction to the course and corrosion implications

Lecture 2 - Can we predict if a metal corrodes? - Part I

Lecture 3 - Can we predict if a metal corrodes? - Part II

Lecture 4 - Can we calculate the rate of corrosion: Electrochemical kinetics - Tafel relation?

Lecture 5 - Can we calculate the rate of corrosion: Electrochemical kinetics - diffusion and mixed potential theory?

Lecture 6 - Can we calculate the corrosion rate of metals: Mixed potential theory and passivity?

Lecture 7 - Passivity (Continued...)

Lecture 8 - DC polarisation experiments and their relation to mixed potential theory/Evans diagram

Lecture 9 - Pourbaix diagram and electrochemical corrosion

Lecture 10 - Forms of corrosion: Uniform v/s localised corrosion

Lecture 11 - Forms of corrosion: Factors affecting uniform corrosion

Lecture 12 - Forms of corrosion: Preventive measures for uniform corrosion - Part I

Lecture 13 - Forms of corrosion: Preventive measures for uniform corrosion - Part II

Lecture 14 - Forms of corrosion: Galvanic or dissimilar metal corrosion - Part I

Lecture 15 - Forms of corrosion: Galvanic or dissimilar metal corrosion - Part II

Lecture 16 - Forms of corrosion: Galvanic or dissimilar metal corrosion - Part III

Lecture 17 - Forms of corrosion: Crevice corrosion - Part I

Lecture 18 - Forms of corrosion: Crevice corrosion - Part II

Lecture 19 - Forms of corrosion: Pitting corrosion - Part I

Lecture 20 - Forms of corrosion: Pitting corrosion - Part II

Lecture 21 - Forms of corrosion: Intergranular corrosion - Part I

Lecture 22 - Forms of corrosion: Intergranular corrosion - Part II

Lecture 23 - Forms of corrosion: Intergranular corrosion - Part III

Lecture 24 - Forms of corrosion: Intergranular corrosion - Part IV

Lecture 25 - Forms of corrosion: Selective leaching or dealloying

Lecture 26 - Forms of corrosion: Flow assisted corrosion and erosion corrosion - Part I

Lecture 27 - Forms of corrosion: Erosion corrosion - Part II

Lecture 28 - Forms of corrosion: Fretting corrosion

Lecture 29 - Forms of corrosion: Stress corrosion cracking - Part I

Lecture 30 - Forms of corrosion: Stress corrosion cracking - Part II

Lecture 31 - Forms of corrosion: Stress corrosion cracking - Part III

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Forms of corrosion: Hydrogen damage

Lecture 33 - Forms of corrosion: Microbial corrosion

Lecture 34 - Effective corrosion management

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Cathodic Protection Engineering (Metallurgy and Material Science)

Co-ordinators : Prof. V.S. Raja

Lecture 1 - Introduction to the course and understanding corrosion

Lecture 2 - External corrosion of pipelines

Lecture 3 - Electrochemical principles

Lecture 4 - Criteria

Lecture 5 - Assessment of pipeline condition through surveys - Part I

Lecture 6 - Assessment of pipeline condition through surveys - Part II

Lecture 7 - Anode ground bed for cathodic protection

Lecture 8 - Perspectives in storage tanks and off-shore structures

Lecture 9 - Anodes

Lecture 10 - Worked out examples

Lecture 11 - Stray current corrosion and its control

Lecture 12 - Coatings and rectifier selection

Lecture 13 - Internal corrosion of oil and steel gas pipelines

Lecture 14 - Anodic protection engineering

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

NPTEL : NOC:Introduction to Materials Science and Engineering (Metallurgy and Material Science)

Co-ordinators : Prof. Rajesh Prasad

Lecture 1 - Intoduction

Lecture 2 - Crystal geometry

Lecture 3 - Unit cell

Lecture 4 - Classification of lattices

Lecture 5 - Gaps in Bravais lattice list

Lecture 6 - Symmetry - I

Lecture 7 - Symmetry - II

Lecture 8 - Classification of lattices on the basis of symmetry

Lecture 9 - A symmetry based approach to Bravais lattices

Lecture 10 - Miller indices of directions

Lecture 11 - Miller indices for planes

Lecture 12 - Miller indices for plane and its normal in Cubic Crystal

Lecture 13 - Weiss Zone law and its applications

Lecture 14 - Inter-planar spacing

Lecture 15 - Braggâ€™s Law

Lecture 16 - Close-packing of hard spheres

Lecture 17 - Hexagonal Close-Packed (HCP) structure

Lecture 18 - Lattice and motif of HCP crystals

Lecture 19 - c/a ratio of an ideal HCP crystal

Lecture 20 - ABCABC stacking of close-packed spheres

Lecture 21 - Voids in close-packed structures

Lecture 22 - Solid solutions - I

Lecture 23 - Solid solutions - II

Lecture 24 - Hume-Rothery rules

Lecture 25 - Ordered and disordered solid solutions

Lecture 26 - Graphene

Lecture 27 - Structure of graphite

Lecture 28 - Structure of diamond

Lecture 29 - Carbon nanotubes (CNT)

Lecture 30 - Buckminsterfullerene (C60)

Lecture 31 - Ionic solids

Lecture 32 - NaCl

Lecture 33 - CsCl

Lecture 34 - ZnS

Lecture 35 - BCC vs CsCl

Lecture 36 - Amorphous Solids

Lecture 37 - Polymers

Lecture 38 - Vinyl Polymers

Lecture 39 - Thermoplasts and Thermosets

Lecture 40 - Tacticity

Lecture 41 - Copolymers

Lecture 42 - Crystallinity in Polymers

Lecture 43 - Defects in Crystals

Lecture 44 - Vacancies

Lecture 45 - Edge dislocation: Half plane

Lecture 46 - Edge dislocation: Slip

Lecture 47 - Characteristic vectors of a dislocation

Lecture 48 - Edge, screw and mixed dislocations

Lecture 49 - Screw dislocations

Lecture 50 - Burgers circuit

Lecture 51 - Elastic energy of a dislocation line

Lecture 52 - Burgers vector: Shortest lattice translation

Lecture 53 - Burgers vector of a dislocation is constant along the line

Lecture 54 - Geometrical properties of a dislocations: Dislocation cannot end abruptly in a crystal: Free surface

Lecture 55 - Dislocation cannot end abruptly in a crystal: Grain boundaries

Lecture 56 - Dislocation cannot end abruptly in a crystal: Dislocation nodes

Lecture 57 - Dislocation cannot end abruptly in a crystal: Dislocation loop

Lecture 58 - Dislocation motion

Lecture 59 - 2D defects: Surfaces or interfaces

Lecture 60 - Free surface or external surface of the crystal

Lecture 61 - Stacking faults

Lecture 62 - Twin boundary

Lecture 63 - Grain boundary

Lecture 64 - Small angle symmetric tilt boundary

Lecture 65 - Ball bearing model

Lecture 66 - Phase diagrams: Introduction

Lecture 67 - Phases and components

Lecture 68 - Uses of phase diagrams

Lecture 69 - Phases present in the system

Lecture 70 - Composition of phases present in the system

Lecture 71 - Proportion of phases present in the system

Lecture 72 - Microstructure evolution during solidification in isomorphous systems

Lecture 73 - Eutectic system

Lecture 74 - Eutectic reaction

Lecture 75 - Eutectic, hypoeutectic and hypereutectic alloys

Lecture 76 - Gibbsâ€™ phase rule

Lecture 77 - Fe-C phase diagram

Lecture 78 - Eutectoid, hypoeutectoid and hypereutectoid steels

Lecture 79 - Microstructure of a hypoeutectoid steel

Lecture 80 - Microstructure of a hypereutectoid steel

Lecture 81 - Diffusion: Introduction

Lecture 82 - Fickâ€™s first law

Lecture 83 - Fickâ€™s second law

Lecture 84 - Error function solution of Fickâ€™s second law

Lecture 85 - Atomic mechanisms of diffusion

Lecture 86 - Substitutional diffusion revisited

Lecture 87 - Diffusion paths

Lecture 88 - Steady and unsteady state diffusion

Lecture 89 - Phase Transformation

Lecture 90 - Nucleation

Lecture 91 - Nucleation and capillary rise

Lecture 92 - Nucleation, growth and overall transformation

Lecture 93 - Time-temperature-transformation (TTT) diagram

Lecture 94 - Homogeneus and heterogeneous nucleation

Lecture 95 - Heat treatment of steels

Lecture 96 - TTT diagram of Eutectoid Steels

Lecture 97 - Quenching and martensite

Lecture 98 - Austempering and bainite

Lecture 99 - Tempering

Lecture 100 - Residual stresses and Quench cracks

Lecture 101 - Marquenching and martempering

Lecture 102 - TTT diagram of hypoeutectoid and hypereutectoid steels

Lecture 103 - TTT diagram of alloy steel

Lecture 104 - hardenability of steels

Lecture 105 - Glass Ceramics

Lecture 106 - Tensile test

Lecture 107 - Plastic deformation and crystal structure

Lecture 108 - Shape change

Lecture 109 - Slip

Lecture 110 - Resolved shear stress

Lecture 111 - CRSS

Lecture 112 - Schmid's law

Lecture 113 - CRSS:Theory vs experiment

Lecture 114 - Why is experimental CRSS less than theoretical CRSS

Lecture 115 - Strengthening mechaniksms

Lecture 116 - Dislocation density

Lecture 117 - Frank-Read source

Lecture 118 - strain hardening

Lecture 119 - Dislocation interaction leading to strain hardening - I

Lecture 120 - Dislocation interaction leading to strain hardening - II

Lecture 121 - Solid solution hardening

Lecture 122 - Grain size hardening

Lecture 123 - Age hardening - I

Lecture 124 - Age hardening - II

Lecture 125 - Metastable precipitates

Lecture 126 - Annealing of cold-worked metals

Lecture 127 - Recovery

Lecture 128 - Recrystallization

Lecture 129 - Grain Growth

Lecture 130 - True stress and true strain

Lecture 131 - Creep

Lecture 132 - Effect of stress and temperature on creep

Lecture 133 - Creep Mechanisms

Lecture 134 - Composites

Lecture 135 - Isostrain modulus

Lecture 136 - Isostress modulus

Lecture 137 - Fracture

Lecture 138 - Ductile and Brittle Fracture

Lecture 139 - Role of crack size

Lecture 140 - Griffith's Criterion

Lecture 141 - Stress Concentration

Lecture 142 - Ductile to brittle transition

Lecture 143 - Enhancing fracture resistance

Lecture 144 - Toughening of glass: Tempering

Lecture 145 - Toughening of glass: Ion-Exchange

Lecture 146 - Fatigue

Lecture 147 - Sub-Critical crack growth

Lecture 13 - Miller Indices

Lecture 14 - Miller Indices (Continued...) and Crystal Structures

Lecture 15 - Crystal Structures

Lecture 16 - Crystal Structures

Lecture 17 - Crystal Structures

Lecture 18 - Crystal Structures

Lecture 19 - Crystal Structures

Lecture 20 - Crystal Structures

Lecture 21 - Crystal Structures (Continued...) and Defects in Crystals

Lecture 22 - Defects in Crystals

Lecture 23 - Defects in Crystals

Lecture 24 - Defects in Crystals

Lecture 25 - Defects in Crystals

Lecture 26 - Defects in Crystals

Lecture 27 - Defects in Crystals

Lecture 28 - Defects in Crystals

Lecture 29 - Defects in Crystals

Lecture 30 - Diffusion in Solids

Lecture 31 - Diffusion in Solids

Lecture 32 - Phase Diagrams

Lecture 33 - Phase Diagrams

Lecture 34 - Phase Diagrams

Lecture 35 - Phase Diagrams

Lecture 36 - Phase Diagrams

Lecture 37 - Phase Transformations

Lecture 38 - Phase Transformations

Lecture 39 - Phase Transformations

Lecture 40 - Phase Transformations

Lecture 41 - Phase Transformations

Lecture 42 - Phase Transformations

Lecture 43 - Phase Transformations

Lecture 44 - Phase Transformations

Lecture 45 - Phase Transformations

NPTEL : Environmental Degradation of Materials (Metallurgy and Material Science)

Co-ordinators : Dr. Kallol Mondal

Lecture 1 - Introduction, Basic definition of corrosion

Lecture 2 - Forms of Degradation, Thermodynamics of corrosion

Lecture 3 - Thermodynamics of corrosion

Lecture 4 - Thermodynamics of corrosion

Lecture 5 - Thermodynamics of corrosion, Electrochemical series, Concentration cell

Lecture 6 - Reduction Potential series, Pourbaix diagram

Lecture 7 - Pourbaix diagram

Lecture 8 - Pourbaix diagram

Lecture 9 - Pourbaix diagram, Kinetics of corrosion

Lecture 10 - Kinetics of corrosion, Rate expression, Solved problems

Lecture 11 - Solved problems on the corrosion rate, Exchange current density

Lecture 12 - Exchange current density, Polarization, Activation Polarization, Tafel Equation

Lecture 13 - Activation Polarization, Concentration Polarization

Lecture 14 - Concentration Polarization, Mixed Potential Theory

Lecture 15 - Mixed Potential Theory, Explanation of corrosion events on the basis of Mixed potential theory, Galvanization

Lecture 16 - Explanation of corrosion events on the basis of Mixed potential theory, Effect of impurity, Effect of area factor

Lecture 17 - Explanation of corrosion events on the basis of Mixed potential theory, Effect of area factor, Concentration polarization, Passivation

Lecture 18 - Passivation and Mixed potential theory

Lecture 19 - Passivation and Mixed potential theory

Lecture 20 - Different corrosion protection mechanisms, electrochemical ways of protection, cathodic protection

Lecture 21 - Cathodic and anodic protection

Lecture 22 - Anodic protection, Forms of corrosion, Factors of corrosion

Lecture 23 - Forms of corrosion, Uniform Corrosion, Galvanic corrosion

Lecture 24 - Galvanic corrosion

Lecture 25 - Crevice corrosion

Lecture 26 - Crevice corrosion, Pitting corrosion

Lecture 27 - Pitting corrosion, Intergranular corrosion

Lecture 28 - Intergranular corrosion, Dealloying

Lecture 29 - Dealloying, Erosion corrosion

Lecture 30 - Erosion corrosion, Cavitation

Lecture 31 - Cavitation, Fretting corrosion, corrosion cracking

Lecture 32 - Stress corrosion cracking: mechanisms (dissolution controlled)

Lecture 33 - Stress corrosion cracking: mechanisms (cleavage controlled), factors affecting SCC, hydrogen embrittlement, corrosion fatigue

Lecture 34 - Biologically influenced corrosion, liquid metal attack

Lecture 35 - Corrosion protection, change of materials, effect of design of component

Lecture 36 - Corrosion protection, change of environment, Inhibitors, coatings

Lecture 37 - Oxidation and hot corrosion, pitting Bedworth ratio, thermodynamics of oxidation

Lecture 38 - Thermodynamics of oxidation, Ellingham diagram, oxidation kinetics and laws

Lecture 39 - Oxide structure and Oxidation

Lecture 40 - Hot corrosion, corrosion testing and failure analysis, linear polarization

Lecture 41 - Degradation of composites, polymers and ceramics, corrosion and society

NPTEL : NOC:Phase Diagrams in Materials Science and Engineering (Metallurgy and Material Science)

Co-ordinators : Dr. Krishanu Biswas

Lecture 1 - Introduction to the course

Lecture 2 - Heterogeneous equilibrium and Free energy Formalism

Lecture 3 - Concept of Chemical Potential

Lecture 4 - Phase Rule-I

Lecture 5 - Phase Rule-II and Single Component Equilibria

Lecture 6 - Single Component Phase Diagram

Lecture 7 - Binary Phase Diagram - Isomorphous Diagram

Lecture 8 - Binary Ispmorphous System

Lecture 9 - Solidification of Isomorphous Alloys

Lecture 10 - Free Energy of Binary Isomorphous Phase Diagram

Lecture 11 - Phase Diagram of Binary Eutectic Systems Edit Lesson

Lecture 12 - Solidification of eutectic, hypo-eutectic and hyper-eutectic alloys & their morphologies - I

Lecture 13 - Solidification of eutectic, hypo-eutectic and hyper-eutectic alloys & their morphologies - II

Lecture 14 - Phase diagrams of binary eutectic two terminal solid solution

Lecture 15 - Phase diagrams of binary peritectic System - I

Lecture 16 - Phase diagrams of binary peritectic System - II

Lecture 17 - Phase diagrams of binary peritectic System with intermediate phases

Lecture 18 - Intermediate Phases

Lecture 19 - Introduction to Monotectic Phase Diagram

Lecture 20 - Microstructural Evolution of Monotectic Phase Diagram

Lecture 21 - Free Energy Composition diagrams for Monotectic systems and Syntactic phase diagram

Lecture 22 - Quasichemical theory - I

Lecture 23 - Quasichemical theory - II

Lecture 24 - Quasichemical theory Free enegy formalism

Lecture 25 - Solid state reaction

Lecture 26 - Introduction to Iron-Carbon phase diagram

Lecture 27 - Eutectoid transformation in Iron-Carbon phase diagram

Lecture 28 - Austenite to pearlite transformation in Iron-Carbon phase diagram

Lecture 29 - Hypo-eutectoid steels

Lecture 30 - Pearlite Transformation

Lecture 31 - Martensite Transformation - I

Lecture 32 - Martensite Transformation - II

Lecture 33 - Tempering of Martensite

Lecture 34 - Bainite Transformation

Lecture 35 - TTT curves for Steel

Lecture 36 - Cast Iron - I

Lecture 37 - Cast Iron - II

Lecture 38 - Ductile Iron and Nodular Iron

Lecture 39 - Malleable Iron

Lecture 40 - Alloyed Cast Iron

Lecture 41 - Phase Diagram for different Solid State Reaction

Lecture 42 - Phase Diagram of Ceramic

Lecture 43 - Ternary Phase Diagram - I

Lecture 44 - Ternary Phase Diagram - II

Lecture 45 - Ternary Phase Diagram and Tie Line Construction - I

Lecture 46 - Ternary Phase Diagram and Tie Line Construction - II

Lecture 47 - Ternary Phase Diagram and Tie Line Construction - III

Lecture 48 - Ternary Isomorphous Phase Diagram

Lecture 49 - Ternary Three Phase Equilibria

Lecture 50 - Three Phase Equilibria in Ternary Systems - I

Lecture 51 - Three Phase Equilibria in Ternary Systems - II

Lecture 52 - Solidification Behaviour of Ternary Alloy

Lecture 53 - Three Phase Equilibria

Lecture 54 - Ternary Four Phase Equilibria - I

Lecture 55 - Ternary Four Phase Equilibria - II

Lecture 56 - Solidification Behaviour of Ternary Eutectic Alloys

Lecture 57 - Phase Diagram of Ternary Eutectic with Terminal Solid Solution

Lecture 58 - Ternary Peritectic Reaction

Lecture 59 - Quasi-peritectic Reaction

Lecture 60 - Case Studies on Ternary Phase Diagrams - I

Lecture 61 - Case Studies on Ternary Phase Diagrams - II

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Fundamentals of Material Processing - I (Metallurgy and Material Science)

Co-ordinators : Prof. Shashank Shekhar

Lecture 1 - Introduction

Lecture 2 - Solidification (Casting)

Lecture 3 - Solidification (Welding)

Lecture 4 - Thermodynamics of Solidification

Lecture 5 - Kinetics of Solidification (Homogeneous)

Lecture 6 - Kinetics of Solidification (Heterogeneous)

Lecture 7 - Heat Flow

Lecture 8 - Heat Flow (Continued...)

Lecture 9 - Heat Flow (Insulating Mold Condition)

Lecture 10 - Heat Flow (Insulating Mold Condition) (Continued...)

Lecture 11 - Heat Flow (Interface Resistance Controlled Solidification)

Lecture 12 - Heat Flow (Effect of Superheat)

Lecture 13 - Heat Flow (Solidification of Alloys)

Lecture 14 - Composition Variation

Lecture 15 - Composition Variation (Continued...)

Lecture 16 - Complete and Limited Liquid Diffusion

Lecture 17 - Mixed Mode Solidification

Lecture 18 - Mixed Mode Solidification and Zone Refining

Lecture 19 - Zone Refining (Continued...)

Lecture 20 - Cellular Solidification of Single Phase Alloy

Lecture 21 - Cellular Solidification of Single Phase Alloy (Continued...)

Lecture 22 - Cellular Solidification of Single Phase Alloy (Continued...)

Lecture 23 - Plane Front Solidification of Multiphase Alloy

Lecture 24 - Plane Front Solidification of Multiphase Alloy (Continued...)

Lecture 25 - Fluid Flow Considerations

Lecture 26 - Introduction to Powder Processing

Lecture 27 - Introduction to Powder Processing (Continued...)

Lecture 28 - Powder characterization

Lecture 29 - Powder Characterization Techniques

Lecture 30 - Powder Characterization using Surface Area

Lecture 31 - Powder Characterization using Gas Permeability Method

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Powder Manufacturing

Lecture 33 - Powder Manufacturing (Continued...)

Lecture 34 - Powder Manufacturing (Continued...)

Lecture 35 - Powder Consolidation

Lecture 36 - Powder Consolidation (Continued...)

Lecture 37 - Particle Packing

Lecture 38 - Powder Compaction

Lecture 39 - Powder Compaction (Continued...)

Lecture 40 - Sintering Theory

NPTEL : NOC:Heat Treatment and Surface Hardening - I (Metallurgy and Material Science)

Co-ordinators : Dr. Kallol Mondal, Prof. Sandeep Sangal

Lecture 1 - Introduction to Heat Treatment and Importance of Material Tetrahedron

Lecture 2 - Case studies in reference to Material tetrahedron T/t information and processing

Lecture 3 - Few more case studies in reference to processing with T/t modification

Lecture 4 - Critical Definition and Phase Transformation Thermodynamics and Driving Force

Lecture 5 - Thermodynamics of Phase Transformation Driving force of Phase Transformation

Lecture 6 - Thermodynamics of Phase Transformation and Driving Force for Phase Transformation

Lecture 7 - Finding Value of Driving Force (?G) and Single Component (liquid-solid)

Lecture 8 - Finding Value of Driving Force (?G) and Nucleation Single Component (liquid-solid)

Lecture 9 - Nucleation Treatment Single Component (Solid-Liquid) - I

Lecture 10 - Nucleation Treatment Single Component (Solid-Liquid) - II

Lecture 11 - Solved Problem on Nucleation rate and How to determine the value of ?sl Physical Concept & Interfacial Energy

Lecture 12 - How to determine the value of ?sl (Physical Concept and Interfacial Energy)

Lecture 13 - Interfacial Energy - I

Lecture 14 - Interfacial Energy - II

Lecture 15 - Heterogeneous Nucleation - I

Lecture 16 - Heterogeneous Nucleation - II

Lecture 17 - Solid - Solid Transformation and Nucleation rate - I

Lecture 18 - Solid - Solid Transformation and Nucleation rate - II

Lecture 19 - Phase Diagram and G vs X plot - I

Lecture 20 - Phase Diagram and G vs X plot - II

Lecture 21 - Phase Diagram and G vs X plot - III

Lecture 22 - Introduction to Kinetics of Phase Transformation

Lecture 23 - Variation of ?G* and r* with Undercooling

Lecture 24 - Nucleation rate - I

Lecture 25 - Nucleation Rate - II

Lecture 26 - Critical Undercooling

Lecture 27 - Maximum nucleation rate for homogeneous nucleation

Lecture 28 - Maximum nucleation rate for heterogeneous nucleation

Lecture 29 - Nucleation kinetics in solid state

Lecture 30 - Interface controlled growth

Lecture 31 - Diffusion controlled growth

Lecture 32 - Avrami Kinetics - I

Lecture 33 - Avrami Kinetics - II

Lecture 34 - Avrami Kinetics - III

Lecture 35 - Time-Temperature-Transformation (TTT) diagram

Lecture 36 - Diffusion in Solids - I

Lecture 37 - Diffusion in Solids - II

Lecture 38 - Diffusion in Solids - III

Lecture 39 - Diffusion in Solids - IV

Lecture 40 - Applications of heat treatment

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Fundamentals of Material Processing - Part 2 (Metallurgy and Material Science)

Co-ordinators : Prof. Shashank Shekhar, Prof. Jitesh J Thakkar

Lecture 1 - Introduction to Metal Working

Lecture 2 - Continuum Mechanics

Lecture 3 - Stress Invariants

Lecture 4 - Strain Tensors and Mohr circle for strains

Lecture 5 - Yield Stress Criterion

Lecture 6 - Effective Stress and Strain

Lecture 7 - Work Hardening and Flow Behaviour

Lecture 8 - Effect of Strain Rate

Lecture 9 - Combined Effect of Strain, Strain Rate and Temperature

Lecture 10 - Effect of Temperature

Lecture 11 - Cold, Warm and Hot Working

Lecture 12 - Mechanics of Metal Working

Lecture 13 - Wire Drawing

Lecture 14 - Wire Drawing (Continued...)

Lecture 15 - Hodographs

Lecture 16 - Upper-Bound Analysis

Lecture 17 - Plane Strain Indentation

Lecture 18 - Strain Calculation Models and Friction

Lecture 19 - Types of Friction

Lecture 20 - Effect of Friction in Rolling

Lecture 21 - Vacuum Technology

Lecture 22 - Vacuum Technology (Continued...)

Lecture 23 - Thermal Evaporation

Lecture 24 - Thermal Evaporation (Continued...)

Lecture 25 - Thermal Evaporation (Continued...)

Lecture 26 - Plasma Physics

Lecture 27 - Plasma Physics (Continued...)

Lecture 28 - Sputtering

Lecture 29 - Sputtering (Continued...)

Lecture 30 - Sputtering (Continued...)

Lecture 62 - Impact Testing of Materials

Lecture 63 - Anelastic Behaviour and Composite Materials

NPTEL : NOC:Introductory Materials Informatics (Metallurgy and Material Science)

Co-ordinators : Prof. Krishanu Biswas, Prof. Pratik Kumar Ray

Lecture 1 - General Introduction - Part 1

Lecture 2 - General Introduction - Part 2

Lecture 3 - Statistics and Regression - Part 1

Lecture 4 - Statistics and Regression - Part 2

Lecture 5 - Probability and Classification - Part 1

Lecture 6 - Probability and Classification - Part 2

Lecture 7 - Data Handling-I : Part 1

Lecture 8 - Data Handling-I : Part 2

Lecture 9 - Data Handling-II : Part 1

Lecture 10 - Data Handling-II : Part 2

Lecture 11 - Materials Informatics in Action - Part 1

Lecture 12 - Materials Informatics in Action - Part 2

Lecture 13 - The Gradient Descent Methods - Part 1

Lecture 14 - The Gradient Descent Methods - Part 2

Lecture 15 - Regularization and solvers in regression

Lecture 16 - Regularization and solvers in regression

Lecture 17 - Various Types of Machine Learning - Part 1

Lecture 18 - Various Types of Machine Learning - Part 2

Lecture 19 - Describing the Problems - Part 1

Lecture 20 - Describing the Problems - Part 2

Lecture 21 - Linear Models - Part 1

Lecture 22 - Linear Models - Part 2

Lecture 23 - Decisions Tree - Part 1

Lecture 24 - Decisions Tree - Part 2

Lecture 25 - Decision Trees - Part 1

Lecture 26 - Support Vector Machine - Part 1

Lecture 27 - Support Vector Machine - Part 2

Lecture 28 - Support Vector Machine and Neural Networks - Part 2

Lecture 29 - Neural Networks - Part 1

Lecture 30 - Neural Networks - Part 2

Lecture 31 - Clustering - Part 1

Lecture 32 - Clustering - Part 2

Lecture 33 - Model Selection - Part 1

Lecture 34 - Clustering - Part 2

Lecture 35 - Visualization - Part 1

Lecture 36 - Visualization and transformation - Part 2

Lecture 37 - Dataset transformations - Part 1

Lecture 38 - Dataset transformations - Part 2

Lecture 39 - Data mining - Part 1

Lecture 40 - Mapping of materials - Part 2

Lecture 41 - Data in Materials Informatics - Part 1

Lecture 42 - Data in Materials Informatics - Part 2

Lecture 43 - Structure Maps - Part 1

Lecture 44 - Structure Maps - Part 2

Lecture 45 - Phase Diagrams - Part 1

Lecture 46 - Periodic Table and Elemental Descriptors - Part 2

Lecture 47 - Featurization - Physical Principles - Part 1

Lecture 48 - Featurization - Pair Plots and Correlation Matrix - Part 2

Lecture 49 - Thermodynamic Features - Miedemaâ€™s Model

Lecture 50 - Structure of Materials - Part 1

Lecture 51 - Structure of Materials - Microstructure - Part 2

Lecture 52 - Prediction of Composition Based Properties - Part I

Lecture 53 - Prediction of Composition Based Properties - Part II

Lecture 54 - Molecular Fingerprints - Part I

Lecture 55 - Molecular Fingerprints - Part II

Lecture 56 - Mathematical Microstructure - Part 1

Lecture 57 - The Microstructure Function - Part 2

Lecture 58 - Two-point Statistics and Dimensionality Reduction

Lecture 59 - Combinatorial-Materials-Science

Lecture 60 - Convolutional Neural Network

Lecture 61 - Microstructure Representation-Synthetic Microstructures

Lecture 62 - P-S-P Linkage

Lecture 63 - Decision Making and Interpretation

Lecture 64 - Setting up ML problems - Part 1

Lecture 65 - Interrogating Machine Learning models - Examples - Part 2

Lecture 66 - Physically Informed Neural Networks

Lecture 67 - Combinatorial Materials Processing

Lecture 68 - High throughput Characterization

Lecture 69 - Synthetic Data

Lecture 70 - Conclusion, Challenges and Future Directions

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Phase Diagrams in Single Component and Binary Systems (Metallurgy and Material Science)

Co-ordinators : Prof. Kallol Mondal

Lecture 1 - Introduction - I

Lecture 2 - Introduction - II

Lecture 3 - Definition of thermodynamic terms

Lecture 4 - Understanding of thermodynamic equilibrium - I

Lecture 5 - Understanding of thermodynamic equilibrium - II

Lecture 6 - Understanding of thermodynamic equilibrium - III

Lecture 7 - Concept of Entropy - I

Lecture 8 - Concept of Entropy - II

Lecture 9 - Concept of Entropy - III

Lecture 10 - Concept of equilibrium based on entropy and internal energy

Lecture 11 - Concept of equilibrium based on auxiliary functions

Lecture 12 - Equilibrium Condition - Helmholtz Free Energy

Lecture 13 - Equilibrium Condition - Gibbs Free Energy

Lecture 14 - Phase equilibria - consideration of chemical potential - I

Lecture 15 - Phase equilibria - consideration of chemical potential - II

Lecture 16 - Phase equilibria in H2O system - Clapeyron Equation

Lecture 17 - Phase equilibria in H2O system - Practical examples and âˆ†G calculations for given T

Lecture 18 - Phase equilibria in H2O system - Clausius-Clapeyron Equation

Lecture 19 - Phase equilibria in H2O system - Hierarchy of Equilibrium/Stability - I

Lecture 20 - Phase equilibria in H2O system - Hierarchy of Equilibrium/Stability - II

Lecture 21 - Phase equilibria in H2O system - G vs P plot at constant Temperature

Lecture 22 - Understanding the G vs T Plot for the Iron (Fe)

Lecture 23 - Multicomponent Systems - Concept of Standard State

Lecture 24 - Multicomponent Systems - Mixing of Ideal Gases

Lecture 25 - Multicomponent Systems - Calculation of âˆ†Hmix, âˆ†Gmix, and âˆ†Smix, for Ideal Gas Systems - I

Lecture 26 - Multicomponent Systems - Calculation of âˆ†Hmix, âˆ†Gmix, and âˆ†Smix, for Ideal Gas Systems - II

Lecture 27 - Condensed Solution - Analysing Gibbs Free Energy of Mixing

Lecture 28 - Condensed Solution - Understanding Raoultâ€™s Law

Lecture 29 - Condensed Solution - Understanding Henryâ€™s Law

Lecture 30 - Condensed Solution - Calculation of âˆ†Gmix

Lecture 31 - Condensed Solution - Calculation of âˆ†Hmix, âˆ†Gmix, âˆ†Smix, and âˆ†Vmix

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Condensed Solution - Understanding the Significance of âˆ†Hmix, âˆ†Gmix, âˆ†Smix, and âˆ†Vmix

Lecture 33 - Condensed Ideal Solution - Graphical Representation of âˆ†Hmix, âˆ†Smix, and âˆ†Gmix

Lecture 34 - Condensed Ideal Solution - Graphical Representation of âˆ†Gmix, Î”GÌ…MA and Î”GÌ…MB

Lecture 35 - Condensed Ideal Solution - Graphical Representation of Gibbs Free Energy of Solution

Lecture 36 - Condensed Ideal Solution - Graphical Representation of Partial Molar Gibbs Free Energy of Components in a Binary Solution - II

Lecture 37 - Condensed Ideal Solution- Common Tangent and Concept of Equilibrium between Two Phases

Lecture 38 - Understanding Isomorphous Phase Diagram - I

Lecture 39 - Understanding Isomorphous Phase Diagram - II

Lecture 40 - Understanding Isomorphous Phase Diagram - Lever Rule and Fraction of Phases

Lecture 41 - Calculation of Isomorphous Phase Diagram - I

Lecture 42 - Calculation of Isomorphous Phase Diagram - II

Lecture 43 - Calculation of Isomorphous Phase Diagram - III

Lecture 44 - Deviation from Ideality- Formation of Solution

Lecture 45 - Non-Ideal Solution- Regular Solution Model and Expression of âˆ†Hmix - I

Lecture 46 - Non-Ideal Solution- Regular Solution Model and Expression of âˆ†Hmix - II

Lecture 47 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix) - Deviation from Ideality - I

Lecture 48 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix) - Deviation from Ideality - II

Lecture 49 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix) - Deviation from Ideality - III

Lecture 50 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix) - Deviation from Ideality - IV

Lecture 51 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix)

Lecture 52 - Enthalpy of mixing (âˆ†Hmix) and Gibbs Free Energy of Mixing (âˆ†Gmix)

Lecture 53 - Evolution of G-X Plot with Variation in Interaction Parameter (Î©)

Lecture 54 - Evolution of G-X Plot and associated Phase Diagram with Variation in Interaction Parameter (Î©) - I

Lecture 55 - Evolution of G-X Plot and associated Phase Diagram with Variation in Interaction Parameter (Î©) - II

Lecture 56 - Evolution of G-X Plot and associated Phase Diagram with Variation in Interaction Parameter (Î©) - III

Lecture 57 - Evolution of G-X Plot and associated Phase Diagram with Variation in Interaction Parameter (Î©) - IV

Lecture 58 - Understanding Eutectic Phase Diagram

Lecture 59 - Understanding Eutectic Phase Diagram and Partitioning and Partitionless Transformation

Lecture 60 - Understanding Eutectoid and Peritectic Phase Diagram

Lecture 61 - Understanding Peritectic Phase Diagram - Part A

Lecture 62 - Understanding Complex Phase Diagrams and the Concept of Diffusion Phenomena - Part B

Lecture 63 - Understanding Gibbsâ€™ Phase Rule

NPTEL : Advanced ceramics for strategic applications (Metallurgy and Material Science)

Co-ordinators : Prof. H.S. Maiti

Lecture 1 - Introduction

Lecture 2 - Introduction (Continued...)

Lecture 3 - Crystal Structure

Lecture 4 - Crystal Structure (Continued...)

Lecture 5 - Crystal Structure (Continued...)

Lecture 6 - Crystal Structure (Continued...)

Lecture 7 - Defects in crystalline solids

Lecture 8 - Defects in crystalline solids (Continued...)

Lecture 9 - Dislocation

Lecture 10 - Two and Three Dimensional Defects

Lecture 11 - Electrical Conduction in ceramics

Lecture 12 - Electrical Conduction in Ceramics (Continued...)

Lecture 13 - Electrical Conduction in Ceramics (Continued...)

Lecture 14 - Electrical Conduction in Ceramics (Continued...)

Lecture 15 - Electrical Conduction in Ceramics (Continued...)

Lecture 16 - Electrical Conduction in Ceramics (Continued...)

Lecture 17 - Electrical Phenomenon in Insulators

Lecture 18 - Electrical Phenomenon in Insulators (Continued...)

Lecture 19 - Ferroelectric , Piezoelectric and Pyroelectric Ceramics

Lecture 20 - Ferroelectric , Piezoelectric and Pyroelectric Ceramics (Continued...)

Lecture 21 - Ferroelectric , Piezoelectric and Pyroelectric Ceramics (Continued...)

Lecture 22 - Ferroelectric , Piezoelectric and Pyroelectric Ceramics (Continued...)

Lecture 23 - Relaxor Ferroelectric

Lecture 24 - Superconductivity

Lecture 25 - Superconductivity (Continued...)

Lecture 26 - Ceramic Gas Sensor

Lecture 27 - Ceramic Gas Sensor (Continued...)

Lecture 28 - Solid Oxide Fuel Cell

Lecture 29 - Solid Oxide Fuel Cell (Continued...)

Lecture 30 - Solid Oxide Fuel Cell (Continued...)

Lecture 31 - Hydrogen Generation through MIEC Reactor

Lecture 32 - Lithium Ion Battery

Lecture 33 - Lithium Ion Battery (Continued...)

Lecture 34 - Magnetic Ceramics

Lecture 35 - Magnetic Ceramics (Continued...)

Lecture 36 - Magnetic Ceramics (Continued...)

Lecture 37 - Magnetic Ceramics (Continued...)

Lecture 38 - Sintering of Ceramics

Lecture 39 - Sintering of Ceramics (Continued...)

Lecture 40 - Sintering of Ceramics (Continued...)

Lecture 41 - Sintering of Ceramics (Continued...)

Lecture 42 - Mechanical Properties of Ceramic Materials

Lecture 43 - Mechanical Properties of Ceramic Materials (Continued...)

Lecture 44 - Mechanical Properties of Ceramic Materials (Continued...)

Lecture 45 - Mechanical Properties of Ceramic Materials (Continued...)

Lecture 46 - Structural Ceramics Materials

Lecture 47 - Bioceramics

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Non-ferrous Extractive Metallurgy (Metallurgy and Material Science)

Co-ordinators : Prof. H.S. Ray, Mr. L. Pugazhenthy

Lecture 1 - Brief History of Non-ferrous Metal

Lecture 2 - Brief History of Non-ferrous Metal (Continued...)

Lecture 3 - Sources of Non-ferrous Metal

Lecture 4 - Mineral Benefication Techniques

Lecture 5 - General Methods of Metal Extraction

Lecture 6 - Principles of Carbon Reduction

Lecture 7 - Principles of Hydrometalling

Lecture 8 - Principles of Electrometallurgy

Lecture 9 - Electrometallurgy (Continued...) and Temkin Model for Fused Salts

Lecture 10 - Refining of Metals - Chemical Methods

Lecture 11 - Refining of Metals - Physical Methods

Lecture 12 - Concluding part of Module - 4

Lecture 13 - Concluding part of Module - 4 (Continued...)

Lecture 14 - Module - 5 Extraction of Metals from Oxides, Extraction of Magnesium

Lecture 15 - Extraction Aluminium

Lecture 16 - Extraction Aluminium (Continued...1)

Lecture 17 - Extraction Aluminium (Continued...2)

Lecture 18 - Extraction Aluminium (Continued...3)

Lecture 19 - Extraction of Tin

Lecture 20 - Extraction of Ferro Alloys

Lecture 21 - Module - 6 Extraction of Metals from Sulphides Extraction of Copper

Lecture 22 - Extraction of Copper (Continued...)

Lecture 23 - Hydrometallurgy of Copper

Lecture 24 - Extraction of Lead

Lecture 25 - Extraction of Zinc-Imperial Smelting Process

Lecture 26 - Module - 7 Extraction of metals from halides, Extraction of reactor metals

Lecture 27 - Extraction of reactor metals (Continued...1)

Lecture 28 - Extraction of reactor metals (Continued...2)

Lecture 29 - Extraction of Titanium

Lecture 30 - Extraction of Precious Metals

Lecture 31 - Production of Secondary Metals and Treatment of Wastes

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Energy and Environment Related Issues in Nonferrous Metals Production

Lecture 33 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...1)

Lecture 34 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...2)

Lecture 35 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...3)

Lecture 36 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...4)

Lecture 37 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...5)

Lecture 38 - Energy and Environment Related Issues in Nonferrous Metals Production (Continued...6)

Lecture 39 - Nonferrous Metals in India - Unleashing its true potential

Lecture 40 - Nonferrous Metals in India - Unleashing its true potential (Continued...)

Lecture 41 - Review and Summary

Lecture 42 - Review and Summary (Continued...1)

Lecture 43 - Review and Summary (Continued...2)

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Principles of Physical Metallurgy (Metallurgy and Material Science)

Co-ordinators : Prof. R.N. Ghosh

Lecture 1 - Introduction

Lecture 2 - Atomic Bond and Crystal Structure

Lecture 3 - Atomic Bond and Crystal Structure (Continued...1)

Lecture 4 - Atomic Bond and Crystal Structure (Continued...2)

Lecture 5 - Experimental Tools & Techniques

Lecture 6 - Experimental Tools & Techniques (Continued...)

Lecture 7 - Solidification of Pure Metal

Lecture 8 - Plastic Deformation of Pure Metal

Lecture 9 - Plastic Deformation of Pure Metal (Continued...)

Lecture 10 - Crystal Defects in Metals

Lecture 11 - Crystal Defects in Metals (Continued...1)

Lecture 12 - Crystal Defects in Metals (Continued...2)

Lecture 13 - Crystal Defects in Metals (Continued...3)

Lecture 14 - Crystal Defects in Metals (Continued...4)

Lecture 15 - Diffusion in Solids

Lecture 16 - Diffusion in Solids (Continued...)

Lecture 17 - Numerical Examples in Diffusion

Lecture 18 - Solidification of Binary Alloys

Lecture 19 - Solidification of Binary Alloys (Continued...1)

Lecture 20 - Solidification of Binary Alloys (Continued...2)

Lecture 21 - Solidification of Binary Alloys (Continued...3)

Lecture 22 - Solidification of Binary Alloys (Continued...4)

Lecture 23 - Iron-Carbon Phase Diagram

Lecture 24 - Iron-Carbon Phase Diagram (Continued...)

Lecture 25 - Ternary Phase Diagram

Lecture 26 - Common Binary Alloys

Lecture 27 - Metal Working : Deformation Processing

Lecture 28 - Metal Working : Deformation Processing (Continued...)

Lecture 29 - Precipitation for Solid Solution

Lecture 30 - Precipitation for Solid Solution (Continued...)

Lecture 31 - Heat Treatment of Steel

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Heat Treatment of Steel (Continued...1)

Lecture 33 - Heat Treatment of Steel (Continued...2)

Lecture 34 - Heat Treatment of Steel (Continued...3)

Lecture 35 - Heat Treatment of Steel (Continued...4)

Lecture 36 - Heat Treatment of Steel (Continued...5)

Lecture 37 - Surface Hardening

Lecture 38 - Structural Steel

Lecture 39 - Structural Steel (Continued...)

Lecture 40 - Ultra High Strength Steel

Lecture 41 - Preferred Orientation: Application

Lecture 42 - Metal Joining

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Processing of Semiconducting Materials (Metallurgy and Material Science)

Co-ordinators : Dr. Pallab Banerji

Lecture 1 - Introduction to Electronics Materials

Lecture 2 - Electrical Conductivity of Materials

Lecture 3 - Direct and Indirect Band Semiconductors

Lecture 4 - Doping in Semiconductors

Lecture 5 - Semiconductor Statistics

Lecture 6 - Importance of Doping

Lecture 7 - Diffusion and Ion Implantation - I

Lecture 8 - Diffusion and Ion Implantation - II

Lecture 9 - Diffusion and Ion Implantation - III

Lecture 10 - Elemental Semiconductors

Lecture 11 - Compound Semiconductors

Lecture 12 - Bulk Crystal Growth - I

Lecture 13 - Bulk Crystal Growth - II

Lecture 14 - Ga As Crystal Growth

Lecture 15 - Defects in Crystals - I

Lecture 16 - Defects in Crystals - II

Lecture 17 - Band Gap Engineering - I

Lecture 18 - Band Gap Engineering - II

Lecture 19 - Chemical Vapour Deposition - I

Lecture 20 - Chemical Vapour Deposition - II

Lecture 21 - MOCVD

Lecture 22 - Molecular Beam Epitaxy - I

Lecture 23 - Molecular Beam Epitaxy - II

Lecture 24 - p - n Junction

Lecture 25 - Carrier Transport in P - N Junction

Lecture 26 - Characterization - I

Lecture 27 - Characterization - II

Lecture 28 - Optical Characterization - I

Lecture 29 - Metal-Semiconductor Contact - I

Lecture 30 - Metal-Semiconductor Contact - II

Lecture 31 - Applications of Metal-Semiconductor Contact

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Oxidation - I

Lecture 33 - Oxidation - II

Lecture 34 - Different Types of Semiconductor - I

Lecture 35 - Oxidation - I

Lecture 36 - Oxidation - II

Lecture 37 - Dielectric Films

Lecture 38 - Low - K and High - K materials

Lecture 39 - Metallization

Lecture 40 - Materials for Photovoltaics

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Science and Technology of Polymers (Metallurgy and Material Science)

Co-ordinators : Prof. B. Adhikari

Lecture 1 - Basic Concepts on Polymers

Lecture 2 - Basic Concepts on Polymers (Continued...)

Lecture 3 - Basic Concepts on Polymers (Continued...)

Lecture 4 - Polymer Raw Materials

Lecture 5 - Principles of Polymer Synthesis

Lecture 6 - Principles of Polymer Synthesis (Continued...)

Lecture 7 - Principles of Polymer Synthesis (Continued...)

Lecture 8 - Principles of Polymer Synthesis (Continued...)

Lecture 9 - Principles of Polymer Synthesis (Continued...)

Lecture 10 - Principles of Polymer Synthesis (Continued...)

Lecture 11 - Structure and Properties of Polymers (Continued...)

Lecture 12 - Structure and Properties of Polymers (Continued...)

Lecture 13 - Structure and Properties of Polymers (Continued...)

Lecture 14 - Structure and Properties of Polymers (Continued...)

Lecture 15 - Polymerization Techniques

Lecture 16 - Polymerization Techniques (Continued...)

Lecture 17 - Polymerization Techniques (Continued...)

Lecture 18 - Polymer Products

Lecture 19 - Polymer Products (Continued...)

Lecture 20 - Rubber Products

Lecture 21 - Rubber Products (Continued...)

Lecture 22 - Conducting Polymers

Lecture 23 - Conducting Polymers (Continued...)

Lecture 24 - Liquid Crystalline Polymers

Lecture 25 - Stimuli Responsive Polymer and its application

Lecture 26 - Stimuli Responsive Polymer and its application (Continued...)

Lecture 27 - Polymeric Nanomaterials and Devices (Continued...)

Lecture 28 - Polymeric Nanomaterials and Devices (Continued...)

Lecture 29 - Polymeric Nanomaterials and Devices (Continued...)

Lecture 30 - Environmental Degradation of Polymers

Lecture 31 - Environmental Degradation of Polymers (Continued...)

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Polymer Composites

Lecture 33 - Polymer Composites (Continued...)

Lecture 34 - Polymer Composites (Continued...)

Lecture 35 - Multicomponent Polymeric Materials

Lecture 36 - Multicomponent Polymeric Materials (Continued...)

Lecture 37 - Multicomponent Polymeric Materials (Continued...)

Lecture 38 - Viscoelasticity

Lecture 39 - Engineering and Speciality Polymers

Lecture 40 - Engineering and Speciality Polymers (Continued...)

NPTEL : Advanced Materials and Processes (Metallurgy and Material Science)

Co-ordinators : Prof. B.S. Murty

Lecture 1 - Structure of Materials - Part I

Lecture 2 - Structure of Materials - Part II

Lecture 3 - Nano Crystalline Materials - Part I

Lecture 4 - Nano Crystalline Materials - Part II

Lecture 5 - Nano Crystalline Materials - Part III

Lecture 6 - Nano Crystalline Materials - Part IV

Lecture 7 - Amorphous Materials - Part I

Lecture 8 - Amorphous Materials - Part II

Lecture 9 - Amorphous Materials - Part III

Lecture 10 - Amorphous Materials - Part IV

Lecture 11 - Amorphous Materials - Part V

Lecture 12 - Quasicrystals - Part I

Lecture 13 - Quasicrystals - Part II

Lecture 14 - Nano Quasicrystals - Part I

Lecture 15 - Nano Quasicrystals - Part II

Lecture 16 - Rapid Solidification Processing

Lecture 17 - Mechanical Alloying

Lecture 18 - Advanced AI Alloys - Part I

Lecture 19 - Advanced AI Alloys - Part II

Lecture 20 - Advanced AI Alloys - Part III

Lecture 21 - Advanced AI Alloys - Part IV and Ti Alloys

Lecture 22 - Shape Memory Alloys

Lecture 23 - Strengthening Mechanisms - Part I

Lecture 24 - Strengthening Mechanisms - Part II

Lecture 25 - Superalloys

Lecture 26 - In-Situ Composites - Part I

NPTEL : NOC:Principles of Polymer Synthesis (Metallurgy and Material Science)

Co-ordinators : Prof. Rajat K Das

Lecture 54 - Laser Assisted Materials Processing:Processes

Lecture 55 - Laser Surface Engineering:Hardening and Melting

Lecture 56 - Laser Surface Engineering with Laser surface hardening and laser surface melting

Lecture 57 - Laser Surface Alloying

Lecture 58 - Laser Surface Cladding

Lecture 59 - Surface Damage - Case Studies

Lecture 60 - Overview and Conclusion

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Ironmaking and Steelmaking (Metallurgy and Material Science)

Co-ordinators : Prof. Gour Gopal Roy

Lecture 1 - Introduction

Lecture 2 - Various Routes of steelmaking

Lecture 3 - The Iron Blast Furnace

Lecture 4 - Thermodynamics of BF ironmaking

Lecture 5 - Thermodynamics of BF Ironmaking (Continued...)

Lecture 6 - Overall Heat and Material Balance in Blast Furnace

Lecture 7 - RIST Diagram based on overall heat and material balance

Lecture 8 - RIST Diagram based on heat and material balance in the Wustite Reserve Zone

Lecture 9 - Kinetics of gas solid reaction: Iron oxide reduction - Part 1

Lecture 10 - Kinetics of gas solid reaction: Iron oxide reduction - Part 2

Lecture 11 - Aerodynamics in Blast Furnace - Part 1

Lecture 12 - Aerodynamics in Blast Furnace - Part 2: Channeling

Lecture 13 - Aerodynamics in Blast Furnace - Part 3: Flooding

Lecture 14 - Coke rate and Fuel efficiency in Blast Furnace

Lecture 15 - oxygen enrichment of blast

Lecture 16 - Blast Furnace and it's Raw Material

Lecture 17 - Sintering of Iron Ore

Lecture 18 - Pelletization of Iron Ore

Lecture 19 - Coking Process

Lecture 20 - Testing of Burden Material

Lecture 21 - Burden Distribution

Lecture 22 - Blast Furnace products and their utilization

Lecture 23 - Blast Furnace Productivity

Lecture 24 - Modeling of Blast Furnace

Lecture 25 - New Potential Technologies for Blast Furnace

Lecture 26 - History of Steelmaking

Lecture 27 - Properties of slag

Lecture 28 - The Reaction Equilibria Unlisted

Lecture 29 - Dephosphorization of liquid steel

Lecture 30 - Kinetics of slag metal reaction

Lecture 31 - LD steelmaking: Basics, process steps, emulsion formation and stabilization

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - LD Steel making: Oxygen lance and jet action and decarburization

Lecture 33 - Evolution of impurities in steel and slag constituents during LD processing

Lecture 34 - Hybrid Processes

Lecture 35 - Electric steel making

Lecture 36 - Secondary Steel making: Introduction and de-oxidation

Lecture 37 - Secondary Steel making: Introduction and de-oxidation (Continued...)

Lecture 38 - Secondary Steel making: Vacuum Techniques for refining steel

Lecture 39 - Homogenization and Gas stirred ladle

Lecture 40 - Ladle de-sulphurization, alloying, stainless steel making

Lecture 41 - Inclusion and its control

Lecture 42 - Injection Metallurgy: Submerged injection of calcium powder

Lecture 43 - Cored wire injection-Modeling, melting sequence, effect of operating parameters

Lecture 44 - IM: Cored wire injection: Industrial implications

Lecture 45 - IM: Tundish metallurgy and design

Lecture 46 - Casting fundamentals- Heat Transfer

Lecture 47 - Casting fundamentals- segregation

Lecture 48 - Morphology of solidification structure and Ingot casting

Lecture 49 - Continuous casting

Lecture 50 - Downstream processing and near net shape casting

Lecture 51 - Introduction to Direct Reduction (DR) and smelting Reduction (SR) Processes

Lecture 52 - Introduction to Direct Reduction (DR) and smelting Reduction (SR) Processes (Continued...)

Lecture 53 - Coal Based DR Processes

Lecture 54 - Coal Based DR Processes (Continued...)

Lecture 55 - Gas based DR Processes

Lecture 56 - Gas based DR Processes (Continued...)

Lecture 57 - Smelting Reduction (SR) Processes

Lecture 58 - Smelting Reduction (SR) Processes (Continued...)

Lecture 59 - Ironmaking and Steelmaking in India

Lecture 60 - Ironmaking and Steelmaking in India (Continued...)

NPTEL : NOC:Non-Metallic Materials (Metallurgy and Material Science)

Co-ordinators : Prof. Subhasish Basu Majumder

Lecture 1 - Classification and applications of non-metallic materials

Lecture 2 - Understanding on polymer structures

Lecture 3 - Characteristics of polymers and advanced polymeric materials

Lecture 4 - Processing of polymers

Lecture 5 - Polymer composites and issues related to recycling

Lecture 6 - Defects in crystalline materials:point, line, planar and three dimensional defects

Lecture 7 - Non- stoichiometry in non-metallic materials

Lecture 8 - Laws of thermodynamics, reaction kinetics - Part 1

Lecture 9 - Laws of thermodynamics, reaction kinetics - Part 2

Lecture 10 - Phase diagram and microstructure evolution in non-metallic materials

Lecture 11 - Carbonaceous materials

Lecture 12 - Fundamental of diffusion, Fickâ€™s laws, their solution and applications - Part 1

Lecture 13 - Fundamental of diffusion, Fickâ€™s laws, their solution and applications - Part 2

Lecture 14 - Phase transformation of non-metallic materials

Lecture 15 - Introduction to glass and amorphous solids

Lecture 16 - Understanding on conventional glass and amorphous solids

Lecture 17 - Glass-ceramics and specialty glasses

Lecture 18 - Mechanical properties of non-metallic materials, stress-strain response, elastic, and plastic deformation

Lecture 19 - Brittle and ductile materials, introduction to fracture mechanics, strength of brittle materials

Lecture 20 - Strengthening of materials, fatigue, and creep

Lecture 21 - Composite materials: Particle-reinforced composites, and fiber reinforced composites

Lecture 22 - Structural Composite

Lecture 23 - Dielectric and piezoelectric behavior

Lecture 24 - Ferroelectric Behaviour of Non-Metallic Materials and Ferroelectric thin film for Non-Volatile Memory Applications

Lecture 25 - Magnetic Properties : Origin of Magnetism, Para, Dia, Ferro, and Ferrimagnetism

Lecture 26 - Ceramic Magnets and their Applications

Lecture 27 - Thermal Properties : Specific Heat, Heat Conduction, Thermal Diffusivity, Thermal expansion

Lecture 28 - Thermoelectric Effect and Magnetocaloric Effect

Lecture 29 - Optical properties: Refractive index, absorption and transmission of electromagnetic radiation, LASERS

Lecture 30 - Introduction to electrochemistry, Galvanic cells, Cell potentials and Gibbs Energy, Concentration dependence

Lecture 31 - Electrochemical storage, rechargeable batteries

Lecture 32 - Introduction to electrochemical methods; cyclic voltammetry and other related techniques

Lecture 33 - Fuel Cell and Energy harvesting

Lecture 34 - Preparation of ceramic powders: auto-combustion, sol-gel synthesis, microwave assisted hydrothermal synthesis

Lecture 35 - Introduction to sintering, sintering mechanism

Lecture 36 - Solid-state sintering and microstructure development

Lecture 37 - Solid-state sintering and microstructure development (Continued...)

Lecture 38 - Liquid phase sintering and microstructure development, speciality sintering, reactive sintering

Lecture 39 - Processing of glass and amorphous/non-crystalline solids

Lecture 40 - Fundamental of thin film growth, growth mechanism and kinetics

Lecture 41 - Thin film growth techniques, thermal evaporation, CVD, sputtering, CSD

Lecture 42 - Fundamentals and processing of conducting and semiconducting ceramic devices

Lecture 43 - Processing of ceramics devices

Lecture 44 - Organic electronic materials: conducting polymers, semi-conducting organic materials, applications

Lecture 45 - Thermal analyses

Lecture 46 - Introduction of spectroscopic technique : UV-VIS spectroscopy

Lecture 47 - Infra-red and Raman spectroscopy

Lecture 48 - Optical and scanning electron microscopy

Lecture 49 - X-ray photoelectron spectroscopy

Lecture 50 - Measurement of mechanical properties, fracture toughness, MOR, hardness

Lecture 51 - Ferroelectric thin film: synthesis and characterization

Lecture 52 - Thermal analysis techniques: Differential scanning calorimetry and thermogravimetry

Lecture 53 - Measurement of optical properties

Lecture 54 - Novel ferroic composites: Synthesis and measurement

Lecture 55 - Fundamentals of corrosion, corrosion of materials

Lecture 56 - Oxidation, corrosion of ceramic materials, degradation of polymers: swelling and dissolution, bond rupture, weathering

Lecture 57 - Ceramics in biology and medicine

Lecture 58 - Design of Ceramics

Lecture 59 - Finishing of Ceramics

Lecture 60 - Fly-ash based glazed wall tiles: A case study

NPTEL : NOC:Scanning Electron-Ion-Probe Microscopy in Materials Characterization (Metallurgy and Material Science)

Co-ordinators : Prof. Debabrata Pradhan

Lecture 1 - Introduction to Microscopy

Lecture 2 - Scanning Electron Microscopy

Lecture 3 - SEM and Its Capabilities

Lecture 4 - Main Components of SEM - Electron Guns

Lecture 5 - Main Components of SEM - Electron Guns and Electromagnetic Lenses

Lecture 6 - Electron Probe Diameter Verses Electron Probe Current

Lecture 7 - Electron Beam - Specimen Interaction

Lecture 8 - Detectors

Lecture 9 - BSE Detector and Sample Preparation for SEM

Lecture 10 - Parameters Need to be Considered to obtain a Good SEM Image

Lecture 11 - How to Get a Good SEM Image

Lecture 12 - Additional Capabilities of SEM

Lecture 13 - Additional Capabilities of SEM (Continued...)

Lecture 14 - Additional Capabilities of SEM (Continued...)

Lecture 15 - Scanning Ion Microscopy - An Introduction

Lecture 16 - Ions Versus Electrons as Source for Microscopy

Lecture 17 - Ions Source in HIM

Lecture 18 - GFIS Properties and Ion Optical Column

Lecture 19 - Ion Optical Column

Lecture 20 - Ion-Solid Interactions and Signal Generation

Lecture 21 - Signal Generation and Contrast Mechanism

Lecture 22 - Contrast Mechanism and Imaging Modes

Lecture 23 - Scanning Transmission Ion Microscopy and Microanalysis with HIM

Lecture 24 - Creation and Modification of Materials by HIM

Lecture 25 - Introduction to Scanning Probe Microscopy

Lecture 26 - STM Instrumentation

Lecture 27 - Main Components of STM

Lecture 28 - Main Components of STM (Continued...)

Lecture 29 - Main Components of STM (Continued...)

Lecture 30 - Working Principle of STM

Lecture 31 - Operating Modes

Lecture 32 - Scanning Tunneling Spectroscopy

Lecture 33 - SPM - Atomic Force Microscopy (AFM)

Lecture 34 - Force Between Tip and Sample in AFM

Lecture 35 - Atomic Force Microscope - Parts

Lecture 36 - Modes of AFM Operation

Lecture 37 - Modes of AFM Operation (Continued...)

Lecture 38 - AFM Imaging

Lecture 39 - Phase Imaging, Noises and Resolution

Lecture 40 - Surface Properties Measurements using Other Forces

Lecture 41 - Surface Properties Measurements using AFM

Lecture 42 - Manipulation of Atoms, Molecules and Industrial Applications

Lecture 43 - Summary

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Techniques of Material Characterization (Metallurgy and Material Science)

Co-ordinators : Prof. Shibayan Roy

Lecture 1 - Introduction to the course and basic principles of image formation

Lecture 2 - Image formation, resolution, magnification, depth of field and depth of focus

Lecture 3 - Aberrations in microscopy: General concepts

Lecture 4 - Introduction, types and image formation in Optical microscopy

Lecture 5 - Components of optical microscope

Lecture 6 - Bright field and Dark field modes

Lecture 7 - Phase contrast optical microscopy

Lecture 8 - Polarized light microscopy

Lecture 9 - Differential interference contrast

Lecture 10 - Fluorescence microscopy

Lecture 11 - Basic components of electron microscope

Lecture 12 - Basic components of electron microscope (Continued...)

Lecture 13 - Basic components of electron microscope (Continued...)

Lecture 14 - Electron-material interaction

Lecture 15 - Electron-material interaction (Continued...)

Lecture 16 - Electron-material interaction (Continued...) and Image formation and contrast generation

Lecture 17 - Modes of TEM (BF and DF)

Lecture 18 - Modes of TEM

Lecture 19 - Modes of TEM (Continued...) and Electron diffraction in TEM

Lecture 20 - Electron diffraction in TEM

Lecture 21 - Electron diffraction in TEM (Continued...)

Lecture 22 - Electron diffraction in TEM (Continued...)

Lecture 23 - Electron diffraction in TEM (Continued...)

Lecture 24 - Electron diffraction in TEM (Continued...)

Lecture 25 - Application of Electron diffraction

Lecture 54 - Intensity of diffracted beam (Continued...)

Lecture 55 - Intensity of diffracted beam (Continued...)

Lecture 56 - Intensity of diffracted beam (Continued...) and X-ray diffraction profile and analysis

Lecture 57 - X-ray diffraction profile and analysis

Lecture 58 - X-ray diffraction profile and analysis (Continued...)

Lecture 59 - X-ray diffraction profile and analysis (Continued...)

Lecture 60 - Electron backscatter diffraction (EBSD)

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Electrochemical Energy Storage (Metallurgy and Material Science)

Co-ordinators : Prof. Subhasish Basu Majumder

Lecture 1 - Fundamentals of electrochemistry, definition of primary and secondary batteries

Lecture 2 - Primary batteries and Secondary batteries

Lecture 3 - Supercapacitors

Lecture 4 - Concepts of thermodynamics pertinent to electrochemical cells

Lecture 5 - Kinetics of electrochemical cells and structural characteristics of electrodes

Lecture 6 - Introduction to EMF, redox potential, Faraday law and Nernstâ€™s law

Lecture 7 - Terminology related to secondary battery : half-cell,full-cell, redox couple,positive

Lecture 8 - Measurements: Cyclic voltammetry, nominal voltage, capacity, rate performance

Lecture 9 - Impedance spectroscopy measurement and analyses

Lecture 10 - Measurement of rechargeable cell: Case study

Lecture 11 - History and categories of lithium batteries

Lecture 12 - Operational mechanisms for lithium batteries: Intercalation materials, alloys

Lecture 13 - Differences of voltage profiles between intercalation materials, alloys, and conversion

Lecture 14 - Properties of electrode materials (Case study: alloy as anode)

Lecture 15 - Properties of electrode materials (conversion type oxide as case study)

Lecture 16 - Positive electrodes: Lithiated transition metal oxides, lithiated iron oxyphosphates etc

Lecture 17 - Negative electrodes: Carbonaceous materials, lithium titanium oxides etc

Lecture 18 - Electrolyte :Liquid Electrolyte, Polymer Electrolyte

Lecture 19 - Current Collector, Conductive Agents, Separator and Other Accessories

Lecture 20 - Novel materials for lithium ion rechargeable cells

Lecture 21 - Principle of Operation of Commerical Cells : viz. C - NMC, C - NCA etc

Lecture 22 - Principle of operation of commercial cells

Lecture 23 - Major characteristics of commercial Li ion cells: Cell performance,degradation phenomena

Lecture 24 - Fabrication of Li ion cell: Cylindrical configuration

Lecture 25 - Fabrication of Li ion cell: Pouch and prismatic cell

Lecture 26 - Positive electrodes: Layered oxide, polyanionic compounds (phosphates, sulphates etc)

Lecture 27 - Negative electrodes: Carbonaceous materials, alloy based and other materials

Lecture 28 - Electrolytes: Roles and requirements, organic electrolyte, ionic liquid electrolyte

Lecture 29 - Performance of Na ion rechargeable cell

Lecture 30 - Future perspective of Na ion cells

Lecture 31 - Introduction to battery module, BMS, thermal management and pack design

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Degradation and safety issues of Li ion rechargeable cells

Lecture 33 - Introduction to battery management system: BMS topologies, hardware, concept of active

Lecture 34 - Introduction to thermal management: Active thermal management system, passive thermal

Lecture 35 - Packaging of battery pack and battery testing: Material selection, sealing of enclosure

Lecture 36 - Classification of supercapacitors: EDLC and pseudocapacitative type

Lecture 37 - Pseudocapacitor

Lecture 38 - Asymmetric supercapacitor and BATCAP: Battery supercapacitor hybrid electrochemical

Lecture 39 - Electrolytes for supercapacitors: Aqueous/organic liquid electrolytes/ionic liquid

Lecture 40 - Current collectors, separators etc. and their effect on performance

Lecture 41 - Operational principles of aqueous and Li - O2 batteries

Lecture 42 - Electrolytes for Li - O2 batteries

Lecture 43 - Limitations of Li - Air batteries

Lecture 44 - State of the art Li - Air batteries : Carbonaceous materials

Lecture 45 - State of the art Li - Air batteries: Case study

Lecture 46 - The element sulfur, principle of operation

Lecture 47 - Advantages and disadvantages of Li - S batteries, positive electrodes

Lecture 48 - Electrolyte and negative electrode for Li - S battery

Lecture 49 - State of the art Li - S batteries : Case study - I

Lecture 50 - State of the art Li - S batteries : Case study - II

Lecture 51 - Global Geographic Distribution of Raw Lithium Resources

Lecture 52 - Nature and geological origin of all potential lithium resources

Lecture 53 - State of the art extraction techniques and known production reserves

Lecture 54 - Recycling of lithium and other battery constituents from used battery

Lecture 55 - Recycling of lithium and other battery constituents from used battery (Continued...)

Lecture 56 - Lead Acid Batteries: Operational principles, main characteristics and applications

Lecture 57 - Lead Acid Batteries: Operational principles, main characteristics and applications (Continued...)

Lecture 58 - Ni-Cd and Ni-MeH Batteries: Operational principles, main characteristics and applications

Lecture 59 - Redox flow battery vanadium redox battery,operational principle, and main characteristics

Lecture 60 - Other Redox Flow Battery Technologies

NPTEL : NOC:Texture in Materials (Metallurgy and Material Science)

Co-ordinators : Prof. Somjeet Biswas

Lecture 1 - Introduction

Lecture 2 - Texture and Anisotropy

Lecture 3 - Processing - Texture - Anisotropic Properties

Lecture 4 - Crystal Structure and Stereographic Projections

Lecture 5 - Utilization of Stereographic Projections

Lecture 6 - Diffraction and Bragg's Law

Lecture 7 - Structure Factor and Diffraction Extinction Criteria

Lecture 8 - Structure factor and diffraction extinction criteria (Continued...)

Lecture 9 - Pole figures

Lecture 10 - Pole figures (Continued...)

Lecture 11 - Inverse Pole Figures

Lecture 12 - Three Dimensional Texture Analysis

Lecture 13 - Euler Angles and ODFs

Lecture 14 - Euler Angles and ODFs (Continued...)

Lecture 20 - Closure Economics and Audit

Lecture 21 - Application of Remote Sensing for Mine Closure-Introduction

Lecture 22 - Remote Sensing Sensors

Lecture 23 - Remote Sensing media and sensors

Lecture 24 - Image Processing and Data Interpretation

Lecture 25 - GIS for Mine Closure: Mapping and Geo-Spatial Data Analysis

Lecture 26 - Integration of phase operations

Lecture 27 - Integration of Interdepartmental work and phase operations - Part 1

Lecture 28 - Integration of Interdepartmental work and phase operations - Part 2

Lecture 29 - Risk Analysis Techniques and Management

Lecture 30 - Post Mine Closure Waste to Wealth Conversion

Lecture 31 - CSR and EMP Integration

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Introduction to Asset Management

Lecture 33 - Principle of Asset Management and Decommissioning of Assets for Site Restoration

Lecture 34 - Brownfield Redevelopment and Value Addition to Assets

Lecture 35 - Landform Design and Post Mining Asset Creation

Lecture 36 - Concept of Sustainable Development and Mining industry

Lecture 37 - Sustainability Measurement and Reporting

Lecture 38 - Sustainability Measurement and Reporting (Continued...)

Lecture 39 - Sustainable Mineral Industry

Lecture 40 - Policy and Legislative Framework of Sustainability for SDG and Mine Closure

Lecture 41 - Communicating sustainability performance

Lecture 42 - Framework of Sustainability reporting

Lecture 43 - Sustainable accounting

Lecture 44 - Case studies on Sustainability initiatives in Mining Industry

Lecture 45 - Data Analytics for Sustainability management

Lecture 46 - Cleaner Production Based Closure Management

Lecture 47 - Regenerative environment design for sustainable Mine Closure

Lecture 48 - Reusable resource identification in post closure mine site

Lecture 49 - Optimization of Residual Value of Assets

Lecture 50 - Post Mining Site for Community wealth

Lecture 51 - Management of water resources

Lecture 52 - Soil Treatment and Revegetation

Lecture 53 - Bio-diversity: Post Land reclamation and plantation

Lecture 54 - Physical and Chemical Stability issues

Lecture 55 - Economic Utilization of Post Mining Structures and assets

Lecture 56 - Techniques for closing underground workings

Lecture 57 - Application of Industry 4.0 for Mine

Lecture 58 - Best mining practices for Sustainable mining - Case studies

Lecture 59 - Stability Monitoring and Enhancing tools

Lecture 60 - VR and AR Technology for Post Mining Mine site Visualization and Design

NPTEL : NOC:Fundamentals of Composite and Cellular Materials (Metallurgy and Material Science)

Co-ordinators : Dr. Siddhartha Roy, Dr. Tapas Laha

Lecture 1 - Fundamental aspects of hybrid materials

Lecture 2 - Materials selection basics for design with hybrid materials

Lecture 3 - Classes of materials and material property charts

Lecture 4 - Material property charts and concept of material indices

Lecture 5 - Material property chart-indices and concept of hybridization

Lecture 6 - Hybrid materials - Composite

Lecture 7 - Cellular solids - Applications of metal foams

Lecture 8 - Cellular solids - Applications of porous ceramics and polymer foams

Lecture 9 - Basics of Composite Materials and Classification

Lecture 10 - Composite Classification - Matrix and Reinforcement

Lecture 11 - Fibers - Fundamentals, Glass fiber

Lecture 12 - Fibers - Boron and Carbon Fibers

Lecture 13 - Fibers - Aramid and Ceramic fibers, Alumina fiber

Lecture 14 - Fibers - SiC fiber and Whiskers

Lecture 15 - Metal matrix composites (MMCs) - Basic concept, Liquid state processing

Lecture 16 - Metal matrix composites (MMCs) - Liquid and Solid state processing

Lecture 17 - Ceramic Matrix Composites (CMCs) - Basic concept, Processing techniques

Lecture 18 - Ceramic Matrix Composites (CMCs) - Processing techniques

Lecture 19 - CMCs and PMCs - Processing and Application

Lecture 20 - Fabrication of cellular ceramics

Lecture 21 - Sintering of ceramics - Aspects and mechanisms

Lecture 22 - Fabrication of cellular ceramics

Lecture 23 - Processing of metal foams - Foaming techniques

Lecture 24 - Processing of metal foams (Continued...)

Lecture 25 - Processing of metal foams (Continued...)

Lecture 26 - Polymer foams - Processing and properties

Lecture 27 - Additive manufacturing - Definition and Prospects

Lecture 28 - Cellular solids classification and Structure description

Lecture 29 - Structure of cellular solids - Pore structure characterization

Lecture 30 - Interfacial phenomena - Basic concept, Adhesion and Wettability

Lecture 31 - Interfacial phenomena - Factors affecting wettability

Lecture 32 - Interfacial phenomena - Interfacial bonding

Lecture 33 - Interfacial phenomena - Interfacial strength measurement

Lecture 34 - Interfacial phenomena - Case study - Al-MWCNT nanocomposite

Lecture 35 - Interfacial phenomena - Case studies: MMCs and CMCs

Lecture 36 - Interfacial phenomena - Case studies: MMCs and CMCs (Continued...)

Lecture 37 - Mechanics of Composites - Unidirectional Lamina

Lecture 38 - Mechanics: Fiber-reinforced composites - Transverse Loading

Lecture 39 - Mechanics: Fiber-reinforced composites - Problem Solving

Lecture 40 - Mechanics: Fiber-reinforced composites - Discontinuous fibers

Lecture 41 - Mechanics of Composites - Discontinuous fibers

Lecture 42 - Dependence of properties on pore structure

Lecture 43 - Mechanics of cellular solids

Lecture 44 - Mechanics of cellular solids (Continued...)

Lecture 45 - Deformation behavior of honeycomb and foams

Lecture 46 - Deformation behaviour of Foams

Lecture 47 - Deformation behaviour of Foams (Continued...)

Lecture 48 - Deformation behaviour of Foams (Continued...)

Lecture 49 - Thermal properties of foams

Lecture 50 - Other important properties of foams (Continued...)

Lecture 51 - Advanced composites - MMCs

Lecture 52 - Advanced composites - MMCs (Continued...)

Lecture 53 - Advanced composites - CMCs

Lecture 54 - Advanced composites - Advanced Processing Techniques

Lecture 55 - Advanced composites - Advanced Processing Techniques (Continued...)

Lecture 56 - Advanced composites - Advanced Processing Techniques (Continued...)

Lecture 57 - Advanced composites - Application oriented advanced composites

Lecture 58 - Microstructure and properties of natural cellular solid - wood

Lecture 59 - Advanced hybrid material - Functionally graded composite materials (FGMs)

Lecture 60 - Advanced hybrid material - Functionally graded composite materials (FGMs) (Continued...)

NPTEL : NOC:Principles of Extractive Metallurgy (Metallurgy and Material Science)

Co-ordinators : Prof. Tarun Kumar Kundu

Lecture 1 - Introduction, Classification and Uses of Metals

Lecture 2 - Introduction, Classification and Uses of Metals (Continued...)

Lecture 3 - Occurrence/Source of Metals

Lecture 4 - Metal Extraction Process Overview

Lecture 5 - Mineral Beneficiation: Overview and Mass Balances

Lecture 6 - Crushing and Grinding (Comminution)

Lecture 7 - Mineral Classification: Separation in Flowing Fluid

Lecture 8 - Mineral Concentration by Froth Flotation

Lecture 9 - Mineral Concentration by Froth Flotation

Lecture 10 - Magnetic and Electric Separation/Concentration

Lecture 11 - Sensor-based/Automatic Ore Sorting

Lecture 12 - Solid-Liquid Separation

Lecture 13 - Particle Size Estimation and Screening

Lecture 14 - Fuels in Metallurgical Processes and Coal Characteritics

Lecture 15 - Calorific Value and Caking Properties of Coal

Lecture 16 - Coke: Making and Properties

Lecture 17 - Combustion of Fuels

Lecture 18 - Combustion: Mass and Heat Balance

Lecture 19 - Combustion Heat Balance: Flame Temperature

Lecture 20 - Combustion Heat Utilization in Furnace

Lecture 21 - Heat Utilization in Furnace: Numerical Examples

Lecture 22 - Classification of Furnaces

Lecture 23 - Refractories for Furnace Linings

Lecture 24 - Refractories: Testing and Production

Lecture 25 - Agglomeration of Fines: Pelletization and Briquetting

Lecture 26 - Agglomeration of Fines: Sintering

Lecture 27 - Extraction of Metal from Sulfides: Roasting

Lecture 28 - Roasting Reactors and Heat Balance

Lecture 29 - Roasting: Predominance Area Diagram

Lecture 30 - Roasting: Application of Predominance Area Diagram

Lecture 31 - Reduction Smelting and Matte Smelting

Lecture 32 - Metallurgical Slag

Lecture 33 - Slag Viscosity, Surface Tention and Theories

Lecture 34 - Slag: Masson and Molecular Theory, Numerical Examples

Lecture 35 - Copper Extraction: Matte Smelting

Lecture 36 - Copper Extraction: Flash Smelting

Lecture 37 - Cu Extraction: Cyclone Flash Smelting and Numerical Examples

Lecture 38 - Cu Extraction: Conversion

Lecture 39 - Conversion of Nickel Sulphide and Numerical Examples

Lecture 40 - TSL Smelting, Continuous Conversion and Direct Cu-Production

Lecture 41 - Reduction Smelting: Lead Extraction

Lecture 42 - Reduction Smelting: Zinc Extraction and ISP

Lecture 43 - Extraction of Thin, Tungsten, Molybdenum and Numerical Examples

Lecture 44 - Extraction of Nb, V, Ferroalloys and Titania (from llmenite)

Lecture 45 - Silicothermy: Pyrometallurgical Magnesium Extraction

Lecture 46 - Reduction Smelting: Iron Extraction in Blast Furnace

Lecture 47 - Alternative Routes of Iron Extraction

Lecture 48 - Halide Metallurgy: Extraction of Ti, Zr, Hf, U, Si Purification

Lecture 49 - Purification of Bulk Metals: Chemical Refining

Lecture 50 - Chemical Refining: Purification of Lead

Lecture 51 - Chemical Refining of Zinc, Tin, Nickel, Ti (Zr, Hf, Th)

Lecture 52 - Physical Refining: Vacuum De-gassing, Zone Melting and Distillation

Lecture 53 - Hydrometallurgy: Unit Steps, Leaching Reagents and Methods

Lecture 54 - Physiochemical Aspect of Leaching, Bacterial Leaching, S/L Separation

Lecture 55 - Hydrometallurgy: Solution Purification and Metal Ion Reduction

Lecture 56 - Hydrometallurgy: Cementation, Electrowinning, Au Extraction and Bayer Process

Lecture 57 - Electrometallurgy: Electrowinning, Electrorefining, Current and Energy Efficiency

Lecture 58 - Electrometallurgy: Extraction of Mg and Al

Lecture 59 - Environmental Concern and Sustainable Metal Extraction

Lecture 60 - New Development in Metal Extraction: Solvometallurgy, Bio-Metallurgy, Membrane Technology

NPTEL : NOC:Clean Coal Technology (Metallurgy and Material Science)

Co-ordinators : Prof. Barun Kumar Nandi

Lecture 8 - Essential physical metallurgy concepts : Part 8 - Phase diagrams: Reactions, Liquidus projections

Lecture 9 - Essential physical metallurgy concepts : Part 9 - Phase fraction plots, Mechanisms and Kinetics of Transformations

Lecture 10 - Experimental methods of phase diagram determination - Cooling curve method

Lecture 11 - Essential concepts of thermodynamics : Part 1 - Scope, State, State properties

Lecture 12 - Essential concepts of thermodynamics : Part 2 - Temperature, Heat capacity, Internal energy

Lecture 13 - Essential concepts of thermodynamics : Part 3 - The first law, Reversible and Irreversible processes

Lecture 14 - Essential concepts of thermodynamics : Part 4 - Isothermal and Adiabatic processes, Path quantities

Lecture 15 - Essential concepts of thermodynamics : Part 5 - Engine, Entropy, Clausius inequality, The second law

Lecture 16 - Essential concepts of thermodynamics : Part 6 - Statistical thermodynamics, Meaning of entropy

Lecture 17 - Essential concepts of thermodynamics : Part 7 - Types of Entropy, Combined laws, Enthalpy and Gibbs energy

Lecture 18 - Thermodynamics of Materials : Part 1 - Lattice stability, Enthalpy of mixing

Lecture 19 - Thermodynamics of Materials : Part 2 - Interaction Parameter, Entropy, Gibbs Energy and Chemical Potential

Lecture 20 - Thermodynamics of Materials : Part 3 - Chemical potential | Activity | Solutions

Lecture 21 - Thermodynamics of Materials : Part 4 - G-x plots | Common tangent construction

Lecture 22 - Thermodynamics of Materials : Part 5 - G-x diagrams | G description

Lecture 23 - Thermodynamics of Materials : Part 6 - G-x curves | Driving force | T0 curve

Lecture 24 - Thermodynamics of Materials : Part 7 - G-x curves exercises | Gibbs phase rule

Lecture 25 - Computational Thermodynamics : Part 1 - Introduction, unary models and data

Lecture 26 - Computational Thermodynamics : Part 2 - Binary and higher order models, Minimization

Lecture 27 - Hands-on Thermodynamic Calculations : Part 1 - Software, Modes, Single point calculations

Lecture 28 - Hands-on Thermodynamic Calculations : Part 2 - Unary G vs T, Binary phase fraction plot

Lecture 29 - Hands-on Thermodynamic Calculations : Part 3 - Binary, Ternary and Metastable Phase Diagrams

Lecture 30 - Hands-on Thermodynamic Calculations : Part 4 - Ternary Vertical, Pseudo binary section, Console Mode

Lecture 31 - Hands-on Thermodynamic Calculations : Part 5 - Vertical sections

Lecture 32 - Hands-on Thermodynamic Calculations : Part 6 - Quternary and higher order diagrams

Lecture 33 - Hands-on Thermodynamic Calculations : Part 7 - Property diagrams

Lecture 34 - Hands-on Thermodynamic Calculations : Part 8 - T0 curve

Lecture 35 - Hands-on Thermodynamic Calculations : Part 9 - Scheil solidification

Lecture 36 - Thermodynamic assessment : Part 1 - Outline of the method, Input thermochemical data

Lecture 37 - Thermodynamic assessment : Part 2 - Input thermochemical data

Lecture 38 - Thermodynamic Assessment : Part 3 - Input phase equilibria data, non-isothermal methods

Lecture 39 - Thermodynamic assessment : Part 4 - Input phase equilibria data, isothermal methods

Lecture 40 - Thermodynamic assessment : Part 5 - Input data collection, critical evaluation

Lecture 41 - Thermodynamic assessment : Part 6 - Models 1

Lecture 42 - Thermodynamic assessment : Part 7 - Models 2

Lecture 43 - Thermodynamic Assessment : Part 8 - Optimization guidelines

Lecture 44 - Thermodynamic Assessment : Part 9 - Hands-on G Optimization

Lecture 45 - Thermodynamic Assessment : Part 10 - Database compilation

Lecture 46 - Kinetics of Materials : Part 1 - Diffusion, Fick's laws

Lecture 47 - Kinetics of Materials : Part 2 - Phase equilibria and diffusion, Mobility

Lecture 48 - Computational Thermokinetics: Introduction and mobility assessment

Lecture 49 - Hands-on kinetic simulation : Part 1 - Homogenization

Lecture 50 - Hands-on kinetic simulation : Part 2 - Moving phase boundary problems

Lecture 51 - Hands on kinetic simulation : Part 3 - Diffusion couple, Non-isothermal diffusion

Lecture 52 - Hands on kinetic simulation : Part 4 - Modified Scheil: Back diffusion, Solute trapping

Lecture 53 - Essential concepts of overall kinetics - Nucleation, Growth

Lecture 54 - Hands-on kinetic simulation : Part 5 - Overall kinetics, TTT

Lecture 55 - Hands-on kinetic simulation : Part 6 - Precipitation aging

Lecture 56 - Compositional design - High-throughput Calphad

Lecture 57 - Insights from Calphad for alloy design and characterization

Lecture 58 - Material properties in Calphad spirit

Lecture 59 - Calphad - Size effects, Electrochemistry, Process metallurgy

Lecture 60 - Calphad - Summary, history and future

NPTEL : NOC:Surface Engineering of Nanomaterials (Metallurgy and Material Science)

Co-ordinators : Prof. Kaushik Pal

Lecture 49 - Scientific case study - AI/ML for regression and Classification analysis in DED 3D printing

Lecture 50 - Challenges and opportunities in Additive Manufacturing

Lecture 51 - Challenges and opportunities in Additive Manufacturing

Lecture 52 - Challenges and opportunities in Additive Manufacturing

Lecture 53 - Challenges and opportunities in Additive Manufacturing

Lecture 54 - Challenges and opportunities in Additive Manufacturing

Lecture 55 - Challenges and opportunities in Additive Manufacturing

Lecture 56 - Challenges and opportunities in Additive Manufacturing

Lecture 57 - Emerging opportunity: Bioprinting in Space

Lecture 58 - Emerging opportunity: Bioprinting in Space

Lecture 59 - Summary of key concepts in AM

Lecture 60 - Summary of Emerging topics and challenges in AM

NPTEL : NOC:Advanced Material Characterization by Atom Probe Tomography and Electron Microscopy (Metallurgy and Material Science)

Co-ordinators : Prof. Surendra Kumar Makineni

Lecture 1 - Introduction to the course

Lecture 2 - History from electrons to field ionisation to field evaporation

Lecture 3 - Filed Ion Microscopy

Lecture 4 - Basic physics behind Field Ionisation

Lecture 5 - Field Ion Microscopy Instrumentation

Lecture 6 - Field Ionisation to Field Evaporation

Lecture 7 - Field Desorption Microscopy

Lecture 8 - Atom Probe Tomography: Variables

Lecture 9 - Instrumentation

Lecture 10 - Pulsing methods

Lecture 11 - Photon-assisted Ionisation

Lecture 12 - Experimental protocols for APT

Lecture 13 - Experimental protocols for APT

Lecture 14 - Experimental protocols for APT

Lecture 15 - Tomographic Reconstruction

Lecture 16 - Tomographic Reconstruction

Lecture 17 - Tomographic Reconstruction

Lecture 18 - Calibration of reconstruction

Lecture 19 - Common artifacts in reconstruction

Lecture 20 - Spatial resolution in reconstruction

Lecture 21 - Electropolishing

Lecture 22 - Focused Ion Beam (FIB)

Lecture 23 - Focused Ion Beam (FIB)

Lecture 24 - Focused Ion Beam (FIB)

Lecture 25 - Data analysis

Lecture 26 - Quality of data

Lecture 27 - Mounting of specimens

Lecture 28 - Ion milling of specimens

Lecture 29 - Data analysis

Lecture 30 - Specimen loading

Lecture 31 - Data acquisition

Lecture 32 - Data analysis

Lecture 33 - Basics

Lecture 34 - Basics

Lecture 35 - Basics

Lecture 36 - Electron specimen interaction

Lecture 37 - TEM column cross-section

Lecture 38 - Electron Diffraction

Lecture 39 - Diffraction Patterns

Lecture 40 - Imaging

Lecture 41 - Defect analysis

Lecture 42 - Image Formation

Lecture 43 - Detection of electrons and ECCI

Lecture 44 - Application to Materials Science

Lecture 45 - Application to Materials Science

Lecture 46 - Application to Materials Science

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Fundamentals of Environmental Pollution and Control (Mining Engineering)

Co-ordinators : Prof. J. Bhattacharyya

Lecture 1 - State of the Environment

Lecture 2 - Environmental Movement

Lecture 3 - Definitions of Environmental Terms

Lecture 4 - Water Pollutants

Lecture 5 - Water Pollutants (Continued...)

Lecture 6 - Water Pollution Modelling-Surface Water

Lecture 7 - Water Pollution Modelling-Surface Water(Continued...)

Lecture 8 - BOD Modelling - Part 1

Lecture 9 - BOD Modelling - Part 2

Lecture 10 - Oxygen Demanding Waste in Streams - Part 1

Lecture 11 - Oxygen Demanding Waste in Streams - Part 2

Lecture 12 - Ground Water and its Contamination

Lecture 13 - Ground Water and its Contamination (Continued...)

Lecture 14 - Ground Water and its Contamination (Continued...)

Lecture 15 - Waste Water Treatment

Lecture 16 - Wastewater Treatment (Continued...)

Lecture 17 - Wastewater Treatment (Continued...)

Lecture 18 - Chemical Treatment

Lecture 19 - Wetland Treatment and Bio-Technology Applications

Lecture 20 - Introduction to Soil

Lecture 21 - Parameters to Soil for Vegetative Growth

Lecture 22 - Parameters to Soil for Vegetative Growth (Continued...)

Lecture 23 - Soil Acidity

Lecture 24 - Soil Erosion

Lecture 25 - Mechanical Soil Erosion Control

Lecture 26 - Soil Erosion Prediction

Lecture 27 - Universal Soil Loss Equation

Lecture 28 - Air Pollutants

Lecture 29 - Health Effects of Air Pollutants - Part 1

Lecture 30 - Health Effects of Air Pollutants - Part 2

Lecture 31 - Air Pollutants and Meteorology - Part 1

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Air Pollutants and Meteorology - Part 2

Lecture 33 - The Point-Source Gaussian Plume Model

Lecture 34 - Ground Level Concentration

Lecture 35 - Emission Control

Lecture 36 - EIA, EMP & EA

NPTEL : NOC:Drilling and Blasting Technology (Mining Engineering)

Co-ordinators : Prof. Kaushik Dey

Lecture 1 - Introduction to Drilling Technology

Lecture 2 - Introduction to Blasting Technology

Lecture 3 - Rock Formation

Lecture 4 - Rock Formation (Continued...)

Lecture 5 - Rock Formation (Continued...)

Lecture 6 - Rock Properties and Testing - 1

Lecture 7 - Rock Properties and Testing - 2

Lecture 8 - Drilling Mechanism

Lecture 9 - Drillability of Rock

Lecture 10 - Drilling Machines - 1

Lecture 11 - Drilling Machines - 2

Lecture 12 - Drilling Pattern - 1

Lecture 13 - Drilling Pattern - 2

Lecture 14 - Special Drilling Methods - I

Lecture 15 - Special Drilling Methods - II

Lecture 16 - Explosives - 1

Lecture 17 - Explosives - 2

Lecture 18 - Explosives accessories - 1

Lecture 19 - Explosives accessories - 2

Lecture 20 - Explosives accessories - 3

Lecture 21 - Explosives properties - 1

Lecture 22 - Explosives properties - 2

Lecture 23 - Explosives properties - 3

Lecture 24 - Basics of blasting - 1

Lecture 25 - Basics of blasting - 2

Lecture 26 - Explosive storage and transportation - 1

Lecture 27 - Explosive storage and transportation - 2

Lecture 28 - Surface blasting - 1

Lecture 29 - Surface blasting - 2

Lecture 30 - Surface blast design

Lecture 31 - Underground blast design - 1

Lecture 32 - Underground blast design - 2

Lecture 33 - Blasting results - 1

Lecture 34 - Blasting results - 2

Lecture 35 - Blasting results - 3

Lecture 36 - Blasting results - 4

Lecture 37 - Problems - 1

Lecture 38 - Problems - 2

Lecture 39 - Problems - 3

Lecture 40 - Problems - 4

NPTEL : NOC:Network Analysis for Mines and Mineral Engineering (Mining Engineering)

Co-ordinators : Prof. Kaushik Dey

Lecture 1 - Introduction to Network Analysis

Lecture 2 - Introduction to network and some terminology

Lecture 3 - Construction of network

Lecture 4 - Introduction to activity on node diagram and comparison with arrow diagram

Lecture 5 - Rules of dummy job,redundancy and cycles

Lecture 6 - Critical path and its calculation

Lecture 7 - Algorithm for critical path early start and early finish times

Lecture 8 - Late start and late finish times algorithm

Lecture 9 - Understanding the slack

Lecture 10 - Examples of slacks and calculation of AON network

Lecture 11 - Project due dates and earliest completion time examples

Lecture 12 - CPM model and cost modelling

Lecture 13 - Lowest cost schedule and optimum schedule

Lecture 14 - Crashing and stretching of jobs

Lecture 15 - Crashing and stretching of jobs (Continued...)

Lecture 16 - Introduction to PERT

Lecture 17 - Expected length of critical path calculation with examples

Lecture 18 - Probability of completion of a project

Lecture 19 - Event oriented project management

Lecture 20 - Algorithm and computer program

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Mining Machinery (Mining Engineering)

Co-ordinators : Prof. Khanindra Pathak

Lecture 1 - Introduction to Mining Machinery - Part A

Lecture 2 - Introduction to Mining Machinery - Part B

Lecture 3 - Introduction to Machine Elements

Lecture 4 - Mechanical Transmission of Power

Lecture 5 - Shafts, Pulleys, Gears, and Geartrains Bearing and Brakes

Lecture 6 - Belt Drives, Chain Drives

Lecture 7 - Prime Movers

Lecture 8 - Fluid Power for Mining Machinery

Lecture 9 - Pneumatic Power for Mining Machinery

Lecture 10 - Steel Wire Rope : Types and Basic Calculation

Lecture 11 - Steel Wire Rope Maintenance

Lecture 12 - Principle of Rock - Tool Interaction

Lecture 13 - Site and Rock Preparation Equipment : Dozer Ripper

Lecture 14 - Site and Rock Preparation Equipment : Ripper

Lecture 15 - Drilling Machines for Mining

Lecture 16 - Site and Rock Preparation Equipment : Scraper

Lecture 17 - Site and Rock Preparation Equipment : Motor Grader

Lecture 18 - Surface Mining Machinery : Machinery for Cyclic Excavation : Electric Rope Shovel

Lecture 19 - Surface Mining Machinery : Machinery for Cyclic Excavation : Hydraulic Excavators and Back Hoe

Lecture 20 - Surface Mining Machinery : Machinery for Cyclic Excavation : Front End Loader

Lecture 21 - Surface Mining Machinery : Machinery for Cyclic Excavation : Dragline

Lecture 22 - Surface Mining Machinery : Machinery for Continuous Excavation : Bucket Wheel Excavator

Lecture 23 - Surface Mining Machinery : Machinery for Continuous Excavation : Bucket Chain Excavators

Lecture 24 - Surface Mining Machinery : Machinery for Continuous Excavation : Continuous Surface Miner

Lecture 25 - Surface Mining Machinery : Machinery for Continuous Excavation : Dredger

Lecture 26 - Underground Mining Machinery Loaders : Gathering Arm Loader

Lecture 27 - Underground Mining Machinery Loaders : Rocker Shovel and Side Discharge Loader

Lecture 28 - Underground Mining Machinery Loaders : Load Haul Dump (LHD) Loader

Lecture 29 - Underground Mining Machinery : Road Header

Lecture 30 - Underground Mining Machinery Underground Drills and Roof Bolter

Lecture 31 - Underground Mining Machinery Continuous Miner

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Underground Mining Machinery Shuttle Car

Lecture 33 - Longwall Mining Machinery Shearer

Lecture 34 - Longwall Mining Machinery Armored Face Conveyor

Lecture 35 - Longwall Mining Machinery Power Support

Lecture 36 - Mine Pumps

Lecture 37 - Mine Pumps : Special Pumps

Lecture 38 - Basic Pumping Theory

Lecture 39 - Air Compressor

Lecture 40 - Fans for Mining

Lecture 41 - Transportation Machinery for Surface Mines

Lecture 42 - Automobiles in Mines and Mining Truck

Lecture 43 - Off-highway Trucks

Lecture 44 - Off-highway Trucks : Rimpull Curves and Tires

Lecture 45 - Off-highway Trucks : Performance

Lecture 46 - Belt Conveyor

Lecture 47 - Belt Conveyor Design Criteria

Lecture 48 - Power Requirements for Belt Conveyor

Lecture 49 - Belt Conveyor Maintenance

Lecture 50 - Aerial Rope Ways

Lecture 51 - Machinery for Underground Mine Transport

Lecture 52 - Endless Rope Haulage

Lecture 53 - Rope Haulage in Underground Mines

Lecture 54 - Locomotive

Lecture 55 - Equipment for Shaft : Winding Machines

Lecture 56 - Mechanics of Hoisting

Lecture 57 - Low Profile Dumper

Lecture 58 - Maintenance of Mining Machinery

Lecture 59 - Maintenance Management Information System

Lecture 60 - Non Destructive Testing

NPTEL : NOC:Underground Mining of Metalliferous Deposits (Mining Engineering)

Co-ordinators : Prof. Bibhuti Bhusan Mandal

Lecture 1 - Metals and Civilisation

Lecture 2 - Mine Life Cycle

Lecture 3 - Present Status of Mineral Deposits

Lecture 4 - Present Status of Underground Mining

Lecture 5 - Terminology - I

Lecture 6 - Terminology - II

Lecture 7 - Determination of Cut Off Grade - I

Lecture 8 - Determination of Cut Off Grade - II

Lecture 9 - Determination of Cut Off Grade - III

Lecture 10 - Dilution

Lecture 11 - Recovery

Lecture 12 - Adit - I

Lecture 13 - Adit - II

Lecture 14 - Incline Shaft

Lecture 15 - Shaft - I

Lecture 16 - Shaft - II

Lecture 17 - Shaft - III

Lecture 18 - Horizontal Drivages - I

Lecture 19 - Horizontal Drivages - II

Lecture 20 - Horizontal Drivages - III

Lecture 21 - Horizontal Drivages - IV

Lecture 22 - Raising and Winzing - I

Lecture 23 - Raising and Winzing - II

Lecture 24 - Raising and Winzing - III

Lecture 25 - Raising and Winzing - IV

Lecture 26 - Selection of Mining Methods - I

Lecture 27 - Selection of Mining Methods - II

Lecture 28 - Selection of Mining Methods - III

Lecture 29 - Selection of Mining Methods - IV

Lecture 30 - Selection of Mining Methods - V

Lecture 31 - Breast Stoping

Lecture 32 - Sampling Practices

Lecture 33 - Stope and Pillar - I

Lecture 34 - Stope and Pillar - II

Lecture 35 - Room and Pillar Mining - I

Lecture 36 - Room and Pillar Mining - II

Lecture 37 - Tributary area method

Lecture 38 - Pillar Failure

Lecture 39 - Shrinkage Stoping - I

Lecture 40 - Shrinkage Stoping - II

Lecture 41 - Cut and Fill stoping - I

Lecture 42 - Cut and Fill stoping - II

Lecture 43 - Cut and Fill stoping - III [Post Pillar Method]

Lecture 44 - Backfill Materials

Lecture 45 - Backfill Materials - II

Lecture 46 - Rock Bolting - I

Lecture 47 - Rock Bolting - II

Lecture 48 - Cable Bolting

Lecture 49 - Sublevel Stoping

Lecture 50 - Long Hole Stoping

Lecture 51 - Resuing Method of Stoping

Lecture 52 - Square Set Stoping

Lecture 53 - Vertical Crater Retreat Method - I

Lecture 54 - Vertical Crater Retreat Method - II

Lecture 55 - Sublevel Caving - I

Lecture 56 - Sublevel Caving - II

Lecture 57 - Block Caving - I

Lecture 58 - Block Caving - II

Lecture 59 - Safety in U/G Metal Mines - I

Lecture 60 - Safety in U/G Metal Mines - II

NPTEL : NOC:Surface Mining Technology (Mining Engineering)

Co-ordinators : Prof. Kaushik Dey

Lecture 1 - Rocks Mineral and Ore

Lecture 2 - Current Status of Surface Mining

Lecture 3 - Stripping Ratios and Pit Layouts - I

Lecture 4 - Stripping Ratios and Pit Layouts - II

Lecture 5 - Stripping Ratios and Pit Layouts - III

Lecture 6 - Phases of Surface Mining - I

Lecture 7 - Phases of Surface Mining - II

Lecture 8 - Phases of Surface Mining - III

Lecture 9 - Opening Through Box Cut - I

Lecture 10 - Opening Through Box Cut - II

Lecture 11 - Drilling Technology for Surface Blasting - I

Lecture 12 - Drilling Technology for Surface Blasting - II

Co-ordinators : Dr. Niket S.Kaisare

Lecture 1 - Course Background: Model Predictive Control

Lecture 2 - Course Outline

Lecture 3 - Additional MATLAB Video - Array Operations

Lecture 4 - Additional MATLAB Video - Array Operations

Lecture 5 - Recap: Linear Algebra

Lecture 6 - Recap: Differential and Difference Equations

Lecture 7 - Recap: Process Control Basics

Lecture 8 - Introduction to Model Predictive Control

Lecture 9 - MPC: Salient Features

Lecture 10 - MPC: Historical Perspective

Lecture 11 - Vectors and Matrices

Lecture 12 - Vector Spaces

Lecture 13 - Linear Operation

Lecture 14 - Null and Image Spaces

Lecture 15 - Eigenvalues and Eigenvectors

Lecture 16 - Eigenvalue Decomposition and Tutorial

Lecture 17 - Recap of Week-2

Lecture 18 - Model Classification

Lecture 19 - Discrete-Time Models Overview

Lecture 20 - Discrete-Time Models

Lecture 21 - Finite Impulse Response Models

Lecture 22 - Finite Step Response Models

Lecture 23 - Recap and Plan for Week-4

Lecture 24 - State Space and Step Response Models

Lecture 25 - Nonlinear Models and Model Linearization

Lecture 26 - Model Types and Model Conversion

Lecture 27 - Model Conversion - 2

Lecture 28 - Model Conversion: TF to SS

Lecture 29 - How to handle MIMO systems

Lecture 30 - Discretization of State-Space Models

Lecture 31 - Introduction to Dynamic Matrix Control (DMC)

Lecture 32 - The DMC Algorithm: Future Predictions

Lecture 33 - The DMC Algorithm: Objective and Constraints

Lecture 34 - The DMC Algorithm: Optimization

Lecture 35 - Coding for DMC Algorithm: Setup

Lecture 36 - Coding for DMC Algorithm: Populate Matrices

Lecture 37 - Recap of DMC Algorithm

Lecture 38 - Extensions of DMC Algorithm

Lecture 39 - LTI Models and Coordinate Transform

Lecture 40 - LTI Models: Stability

Lecture 41 - LTI Models: Controllability

Lecture 42 - LTI Models: Conditions for controllability

Lecture 43 - Tutorial by Arvind (Recap of Controllability)

Lecture 44 - LTI Models: Observability

Lecture 45 - Linear Control: Introduction

Lecture 46 - Pole Placement Controller

Lecture 47 - Linear Quadratic Regulator: Batch Solution

Lecture 48 - LQR: Dynamic Programming Solution

Lecture 49 - State Estimation: Introduction

Lecture 50 - Stochastic Processes and Random Variables

Lecture 51 - State Estimation: Pole Placement Observer

Lecture 52 - Kalman Filter: Terminology

Lecture 53 - Kalman Filter: Derivation

Lecture 54 - Recap of Modules 7-9

Lecture 55 - Recap and Plan for this week

Lecture 56 - Linear Quadratic Gaussian

Lecture 57 - LQG Derivation and Separation Principle

Lecture 58 - Setpoint Tracking in LQ Control

Lecture 59 - Disturbance Rejection in LQ Control

Lecture 60 - Disturbance Modeling for Estimation

Lecture 61 - Estimation with Disturbance Modeling

Lecture 62 - Recap and Plan for this week

Lecture 63 - State-Space MPC: Deterministic case

Lecture 64 - Extension to Measured Disturbances

Lecture 65 - Offset-Free State Space MPC

Lecture 66 - Comparison of State-Space MPC with DMC

Lecture 67 - State-Space MPC: Disturbance Modeling

Lecture 68 - Disturbance Modeling: Background and Setup

Lecture 69 - Stochastic Output-Feedback State-Space MPC

Lecture 70 - Bonus Video: Disturbance Modeling for State Space MPC

Lecture 71 - Self-Guided Tutorial of MPC Toolbox

Lecture 72 - Help Session: Using MPC Toolbox

Lecture 73 - Recap of LQ Control and Linear MPC

Lecture 74 - Linear MPC - Key Features and Results

Lecture 75 - Practical Issues: Inferential Control

Lecture 76 - Practical Issues: Measurement Delay

Lecture 77 - Other Practical Issues

Lecture 78 - Some Classical Examples of MPC

NPTEL : NOC:Research Methodology (Multi-Disciplinary)

Co-ordinators : Prof. Soumitro Banerjee

Lecture 1 - What is Science? - Part 1

Lecture 2 - What is Science? - Part 2

Lecture 3 - Subjective Thinking Versus Objective Thinking

Lecture 4 - Idealism Versus Materialism

Lecture 5 - Causality - Part 1

Lecture 6 - Causality - Part 2

Lecture 7 - Logical Reasoning: Inductive Logic

Lecture 8 - Logical Reasoning: Deductive Logic - Part 1

Lecture 9 - Logical Reasoning: Deductive Logic - Part 2

Lecture 10 - Logical Reasoning: Syllogistic Logic - Part 1

Lecture 11 - Logical Reasoning: Syllogistic Logic - Part 2

Lecture 12 - Logical Reasoning: Syllogism Logic, Truth and Validity

Lecture 13 - Historical Perspective: Emergence of Materialism and Idealism - Part 1

Lecture 14 - Historical Perspective: Emergence of Materialism and Idealism - Part 2

Lecture 15 - Historical Perspective:Renaissance to the Development of Mechanical Materialism - Part 1

Lecture 16 - Historical Perspective:Renaissance to the Development of Mechanical Materialism - Part 2

Lecture 17 - Historical Perspective: The Advent of Empiricism and the Idea of Evolution

Lecture 18 - Historical Perspective: Science in Ancient India

Lecture 19 - Historical Perspective: The Advent of Scientific Materialism - Part 1

Lecture 20 - Historical Perspective: The Advent of Scientific Materialism - Part 2

Lecture 21 - Historical Perspective: The Rise and Fall of Positivism - Part 1

Lecture 22 - Historical Perspective: The Rise and Fall of Positivism - Part 2

Lecture 23 - What Scientists Actually Do - Part 1

Lecture 24 - What Scientists Actually Do - Part 2

Lecture 25 - Falsifiability and Reproducibility - Part 1

Lecture 26 - Falsifiability and Reproducibility - Part 2

Lecture 27 - Proposing a Hypothesis - Part 1

Lecture 28 - Proposing a Hypothesis - Part 2

Lecture 29 - Elements of Scientific Measurement - Part 1

Lecture 30 - Elements of Scientific Measurement - Part 2

Lecture 31 - The Central Limit Theorem and its Applications - Part 1

Lecture 32 - The Central Limit Theorem and its Applications - Part 2

Lecture 33 - Error Bars and Confidence Interval - Part 1

Lecture 34 - Error Bars and Confidence Interval - Part 2

Lecture 35 - Measurement of a Proportion - Part 1

Lecture 36 - Measurement of a Proportion - Part 2

Lecture 37 - Examples of Proportion Measurement

Lecture 38 - Box and Whisker Plot

Lecture 39 - Propagation of Errors - Part 1

Lecture 40 - Propagation of Errors - Part 2

Lecture 41 - Issues in Hypothesis Testing - Part 1

Lecture 42 - Issues in Hypothesis Testing - Part 2

Lecture 43 - Statistical Methods in Hypothesis Testing: Z-Test and T-Test - Part 1

Lecture 44 - Statistical Methods in Hypothesis Testing: Z-Test and T-Test - Part 2

Lecture 45 - Hypothesis Testing: The Chi-Square Test - Part 1

Lecture 46 - Hypothesis Testing: The Chi-Square Test - Part 2

Lecture 47 - Hypothesis Testing: The Chi-Square Test - Part 3

Lecture 48 - Hypothesis Testing: The Chi-Square Test - Part 4

Lecture 49 - Theoretical Research: Functional Relationships from Experimental Data - Part 1

Lecture 50 - Theoretical Research: Functional Relationships from Experimental Data - Part 2

Lecture 51 - Theoretical Research: Mathematical Models of Physical Systems

Lecture 52 - Order of Magnitude Calculations

Lecture 53 - Theoretical Research: Modeling Using Dimensional Analysis - Part 1

Lecture 54 - Theoretical Research: Modeling Using Dimensional Analysis - Part 2

Lecture 55 - An Example of Mathematical Modeling

Lecture 56 - Importance of Theory-Building in Science

Lecture 43 - Molecular Techniques - Part 1

Lecture 44 - Molecular Techniques - Part 2

NPTEL : NOC:Oral Biology (Multi-Disciplinary)

Co-ordinators : Multifaculty

Lecture 1 - Craniofacial anatomy - Part 1

Lecture 2 - Craniofacial anatomy - Part 2

Lecture 3 - Tooth and It's Supporting Structures - Part 1

Lecture 4 - Tooth and It's Supporting Structures - Part 2

Lecture 5 - Specialised mucosa

Lecture 6 - Saliva-Composition and functions

Lecture 7 - Saliva Diagnostics

Lecture 8 - Stem cells in the oro-dental region

Lecture 9 - Stem cell isolation

Lecture 10 - Mineralization dynamics - Part 1

Lecture 11 - Mineralization dynamics - Part 2

Lecture 12 - TMJ Anatomy and Function

Lecture 13 - Oral defense mechanisms

Lecture 14 - Mucosal and regional immunology

Lecture 15 - Oral microbiome

Lecture 16 - Evaluation of Oral microbiome

Lecture 17 - Dysbiosis

Lecture 18 - Molecular mechanisms in oral cancer

Lecture 19 - Flow cytometry in cell and molecular biology

Lecture 20 - Basics of Biomaterial science and engineering

Lecture 21 - Biomimetics - Part 1

Lecture 22 - Biomimetics - Part 2

Lecture 23 - Biomaterials - Polymers

Lecture 24 - Biomaterials - Metals

Lecture 25 - Biomaterials - Ceramics and Colloids

Lecture 26 - 3-D Bioprinting

Lecture 27 - Protein mediated biomaterials

Lecture 28 - Immune response to biomaterials

Lecture 29 - Biomaterial Applications

Lecture 30 - Biocompatible assays

Lecture 31 - Immunoassay

NPTEL : NOC:Introduction to Biomimicry (Multi-Disciplinary)

Co-ordinators : Prof. Sivakumar Srinivasan, Prof. Satya Seshadri, Prof. Mrinalini, Prof. Shiva Subramaniam

Lecture 1 - Course overview

Lecture 2 - What is biomimicry ?

Lecture 3 - Why is biomimicry important ?

Lecture 4 - Nature's unifying patterns - Introduction

Lecture 5 - Case study

Lecture 6 - How to do biomimicry ?

Lecture 7 - Learning resources - Biomimicry Institute

Lecture 8 - Skills, attitudes and mindset for a biomimic

Lecture 9 - Course activity

Lecture 10 - Recap of Week 1

Lecture 11 - What are we mimicking ?

Lecture 12 - Function and Strategy

Lecture 13 - Approaches to biomimicry

Lecture 14 - From Problem to Solution

Lecture 15 - Using the UNSDG to identify challenges

Lecture 16 - Recap of Week 2

Lecture 17 - Step 1 - Define the problem

Lecture 18 - Step 2 - Biologize the problem

Lecture 19 - Step 3 - Discover strategies in nature

Lecture 20 - Applying the Biomimicry Design Spiral

Lecture 21 - Step 4 - Abstract design strategies from nature

Lecture 22 - Step 5 - Emulate nature's strategies in your solution

Lecture 23 - Step 6 - Evaluate feasibility

Lecture 24 - How to apply the biomimicry process ?

Lecture 25 - Recap of Week 4

Lecture 26 - Nature's Unifying Patterns I

Lecture 27 - Systems Thinking - Introduction

Lecture 28 - Systems Thinking - Understanding consequences

Lecture 29 - Nature's Unifying Patterns II

Lecture 30 - Tools - Mind mapping

Lecture 31 - Using biomimicry to design a solution

Lecture 32 - Recap of Week 6

Lecture 33 - Developing creative confidence

Lecture 34 - Learning from the biomimicry process

Lecture 35 - The need for creativity in our lives

Lecture 36 - Unlocking your creativity

Lecture 37 - Taking your biomimicry ideas to market

Lecture 38 - The journey so far

Lecture 39 - Finding the hero in you

Lecture 40 - Course wrap-up

NPTEL : NOC:Electrocardiogram - Interpretation and Application in Clinical Practice (Multi-Disciplinary)

Co-ordinators : Multi-faculty

Lecture 1 - Introduction - Electrocardiogram - Interpretation and application in clinical practice

Lecture 2 - Basic Conduction of Heart

Lecture 3 - ECG Lead system

Lecture 4 - Recording of a Standard ECG (Lead placements and measurements)

Lecture 5 - Waveforms, Intervals and Segments

Lecture 6 - Vector Electrocardiography

Lecture 7 - From Action Potentials to Arrhythmias

Lecture 8 - Pathophysiology, Myocardial Ischemia / Injury

Lecture 9 - Myocardial Infarction (MI), Pathophysiology

Lecture 10 - Drug effects on ECG

Lecture 11 - Patient identification, preparation and interpretation of ECG

Lecture 12 - Sinus rhythms and Bradyarrythmias

Lecture 13 - Approach to tachyarrhythmias

Lecture 14 - AV Blocks and Bundle Branch Block

Lecture 15 - Chamber enlargement and Heart Failure

Lecture 16 - Electrolyte Abnormalities on ECG

Lecture 17 - Recognizing signs and ECG changes in Myocardial Ischemia/Injury

Lecture 18 - ECG changes in myocardial infarction

Lecture 19 - Miscellaneous ECG findings and cardiac arrest

Lecture 20 - Pacemaker Rhythms

NPTEL : NOC:One Health (Multi-Disciplinary)

Co-ordinators : Multi Faculty

Lecture 1 - Introduction to the One Health Concept and National and International health/public health agencies

Lecture 2 - Global Health vs One Health

Lecture 3 - Basics of Research Ethics

Lecture 4 - Integrated human and animal disease surveillance systems

Lecture 5 - Emerging infectious diseases

Lecture 6 - Process of disease emergence and assessment of the risk factors

Lecture 7 - Mechanisms of pathogen cross over across species boundaries

Lecture 8 - Importance of disease detection, Identification and monitoring in public health

Lecture 9 - Introduction to disease vectors and basics of Medical Entomology

Lecture 10 - The factors influencing an emerging disease

Lecture 11 - Antimicrobial resistance a global threat and Importance of antibiotic stewardship program

Lecture 12 - Introduction of Food safety and food borne diseases

Lecture 13 - What are zoonotic diseases and its role in our changing world

Lecture 14 - The integration of human, animal and ecosystem health in control and prevention of these diseases

Lecture 15 - Community engagement for zoonotic disease control in humans and animals through One Health

Lecture 16 - Basics of Epidemiological Studies

Lecture 17 - Rapid Response system, Disaster Management and Outbreak Investigation Plans

Lecture 18 - Basic statistical methods and their application and the measurement of disease frequency

Lecture 19 - Principles of survey design and the concepts of sampling and Mixed method research

Lecture 20 - Introduction to health policy

Lecture 21 - Risk Communication and Pandemic Preparedness

Lecture 22 - Role of community in disease control and ways for community engagement

Lecture 23 - Uses of different types of media for communication

NPTEL : NOC:Canning Technology, Value Addition of Seafood (Fish Processing) (Multi-Disciplinary)

Co-ordinators : Dr. Abhilash Sasidharan, Dr. Maya Raman

Lecture 1 - Course overview Canning technology and Value addition of sea food

Lecture 2 - Introduction and the concept of canning technology

Lecture 3 - History of canning technology - Part 1

Lecture 4 - History of canning technology - Part 2

Lecture 5 - Canning Technology and Value Addition Containers and their Properties - Part 1

Lecture 6 - Canning Technology and Value Addition Containers and their Properties - Part 2

Lecture 7 - Canning Technology and Value Addition Containers and their Properties - Part 3

Lecture 8 - Canning Technology and Value Addition Containers and their Properties - Part 4

Lecture 9 - Canning Technology and Value Addition - Canning process - Part 1

Lecture 10 - Canning Technology and Value Addition - Canning process - Part 2

Lecture 11 - Canning Technology and Value Addition - Thermal process calculations - Part 1

Lecture 12 - Canning Technology and Value Addition - Thermal process calculations - Part 2

Lecture 13 - Microbiology and spoilage of canned food - Part 1

Lecture 14 - Microbiology and spoilage of canned food - Part 2

Lecture 15 - Process of seafood canning - Part 1

Lecture 16 - Process of seafood canning - Part 2

Lecture 17 - Seafood pre-processing - Part 1

Lecture 18 - Seafood pre-processing - Part 2

Lecture 19 - Additives - Part 1

Lecture 20 - Additives - Part 2

Lecture 21 - SOP for seafood canning - Part 1

Lecture 22 - SOP for seafood canning - Part 2

Lecture 23 - SOP for seafood canning - Part 3

Lecture 24 - Nutritional quality of seafood

Lecture 25 - Muscle structure of seafood

Lecture 26 - Spoilage in seafood

Lecture 27 - Preservation methods

Lecture 28 - Value addition in thermally processed foods

Lecture 29 - Quality standards for seafood value added products - Part 1

Lecture 30 - Quality standards for seafood value added products - Part 2

Lecture 31 - Quality standards for seafood value added products - Part 3

NPTEL : NOC:Food Packaging Technology (Multi-Disciplinary)

Co-ordinators : Dr. Jenny Ann John, Dr. Maya Raman

Lecture 1 - Course overview

Lecture 2 - Introduction

Lecture 3 - Paper as packaging material - Part 1

Lecture 4 - Paper as packaging material - Part 2

Lecture 5 - Paper as packaging material - Part 3

Lecture 6 - Glass as packaging material

Lecture 7 - Metal as packaging material - Part 1

Lecture 8 - Metal as packaging material - Part 2

Lecture 9 - Plastic as packaging material - Part 1

Lecture 10 - Plastic as packaging material - Part 2

Lecture 11 - Introduction to packaging system

Lecture 12 - Product characteristics and packaging requirements

Lecture 13 - Rigid, semi-rigid, flexible packaging forms - Part 1

Lecture 14 - Rigid, semi-rigid, flexible packaging forms - Part 2

Lecture 15 - Designing of packaging material

Lecture 16 - Testing of packaging material - Part 1

Lecture 17 - Testing of packaging material - Part 2

Lecture 18 - Testing of packaging material - Part 3

Lecture 19 - Testing of packaging material - Part 4

Lecture 20 - Testing of package performance

Lecture 21 - Principles developing safe and protective packing

Lecture 22 - Transport worthiness test - Part 1

Lecture 23 - Transport worthiness test - Part 2

Lecture 24 - Transport worthiness test - Part 3

Lecture 25 - Safety aspects of food packaging

Lecture 26 - Packaging accessories and advances in packaging

Lecture 27 - Active packaging - Part 1

Lecture 28 - Active packaging - Part 2

Lecture 29 - MA and Aseptic packaging

Lecture 30 - Edible packaging - Part 1

Lecture 31 - Edible packaging - Part 2

Lecture 32 - Vacuum packing machine

Lecture 33 - CA and MA packing machine

Lecture 34 - Gas packing machine

Lecture 35 - Seal and shrink packing machine

Lecture 36 - Form fill sealing machine

Lecture 37 - Aseptic packaging systems

Lecture 38 - Retort pouches

Lecture 39 - Bottling machine - Part 1

Lecture 40 - Bottling machine - Part 2

Lecture 41 - Carton making machine

Lecture 42 - Package printing machines - Part 1

Lecture 43 - Package printing machines - Part 2

NPTEL : NOC:Vulnerability Studies: An Introduction (Multi-Disciplinary)

Co-ordinators : Prof. Pramod K Nayar

Lecture 1 - Introduction

Lecture 2 - Fragility

Lecture 3 - Resilience

Lecture 4 - Interpreting Vulnerability, precarity of work and Access Equality for Equal Opportunity - Part I

Lecture 5 - Interpreting Vulnerability, precarity of work and Access Equality for Equal Opportunity - Part II

Lecture 6 - Social Vulnerability and Group Vulnerability

Lecture 7 - Willed Vulnerability - Endurance Sports

Lecture 8 - Illness, Storytelling and Embodiment

Lecture 9 - Illness, Storytelling and Embodiment Reading - Audre Lordeâ€™s : The Cancer Journals

Lecture 10 - Group Discussion - Vulnerable Bodies

Lecture 11 - The Aesthetics of Vulnerability - I

Lecture 12 - The Aesthetics of Vulnerability - II Traumatic Materialism

Lecture 13 - The Aesthetics of Vulnerability - III Melodrama

Lecture 14 - Vulnerability Aesthetics The Sublime

Lecture 15 - The Aesthetics of Vulnerability - Discussion

Lecture 16 - Biopolitics, biopower and vulnerability - I

Lecture 17 - Biopolitics, biopower and vulnerability - II

Lecture 18 - Pandemics and Biopolitics

Lecture 19 - Biopolitics and vulnerable populations in Contemporary Literature

Lecture 20 - Discussion on Biopolitics

Lecture 21 - Ecoprecarity

Lecture 22 - Ecodystopia - I

Lecture 23 - Ecodystopia - II

Lecture 24 - Discussion on Ecoprecarity and Ecodystopias - I

Lecture 25 - Discussion on Ecoprecarity and Ecodystopias - II

Lecture 26 - Aging and Vulnerability in Literature

Lecture 27 - Aging and Vulnerability - 2

Lecture 28 - Aging and Vulnerability - 3

Lecture 29 - Discussion on Vulnerability and Aging - 1

Lecture 30 - Discussion on Vulnerability and Aging - 2

Lecture 31 - Childhood and Vulnerability - 1

Lecture 32 - Childhood and Vulnerability - 2

Lecture 33 - Childhood and Vulnerability - 3

Lecture 34 - Discussion on Childhood and Vulnerability - I

Lecture 35 - Discussion on Childhood and Vulnerability - II

Lecture 36 - Imperial Vulnerability - I

Lecture 37 - Imperial Vulnerability - II

Lecture 38 - Posthuman Vulnerability

Lecture 39 - Contemporary Genres of Resilience - The Graphic Novel - I

Lecture 40 - Contemporary Genres of Resilience - The Graphic Novel - II

NPTEL : NOC:Pulmonary Function Tests - Interpretation and Application in Clinical Practice (Multi-Disciplinary)

Co-ordinators : Multi-Faculty

Lecture 1 - Functional Anatomy of the Respiratory Tract

Lecture 2 - Mechanics of Respiration - Section 1

Lecture 3 - Mechanics of Respiration - Section 2

Lecture 4 - Ventilation, Perfusion Ventilation Perfusion Relationship

Lecture 5 - Essential Principles of Spirometer

Lecture 6 - Types of Pulmonary function tests

Lecture 7 - Obstructive Lung Diseases: Pathophysiology

Lecture 8 - Restrictive lung Diseases: Pathophysiology

Lecture 9 - Drug Effects on Pulmonary Function

Lecture 10 - Lung Disorders in Children

Lecture 11 - Assessment of Lung Functions in Children

Lecture 12 - Static and Dynamic lung function tests

Lecture 13 - Interpretation of Normal Pulmonary Function Tests

Lecture 14 - Indications for Pulmonary Function Testing

Lecture 15 - Obstructive Airway Diseases - Approach

Lecture 16 - Clinical Diagnosis of Restrictive Lung Disease - Part 1

Lecture 17 - Clinical Diagnosis of Restrictive Lung Disease - Part 1

Lecture 18 - Essential Criteria For a Good Pulmonary Function Testing

Lecture 19 - Interpretation of pulmonary function tests in Restrictive lung disease

Lecture 20 - Interpretation of PFT in Obstructive lung diseases

Lecture 21 - Diffusion Capacity of Lungs for Carbon Monoxide DLCO

Lecture 22 - Radiological assessment of obstructive and restrictive lung disorders

Lecture 23 - Laboratory Video - Pulmonary Function tests - Interpretation and application in clinical practice

NPTEL : NOC:Making Learning Engaging Through Interactive Games (Multi-Disciplinary)

Co-ordinators : Prof. Kartic Vaidyanathan

Lecture 1 - Need for interactive gamified learning

Lecture 2 - Learnings from the Master Class titled Confessions of a Converted Lecture by Prof Eric Mazur

Lecture 3 - Understanding Play and its context in learning in 21st century

Lecture 4 - Benefits of Game Based Learning Scientific Evidences

Lecture 5 - Learning Stoichiometry calculations using board game Case Study

Lecture 6 - Benefits of Game Based Learning across age groups and subjects

Lecture 7 - Benefits of Puzzle Games

Lecture 8 - Game Based Learning Adoption by Countries Overview

NPTEL : NOC:Electrochemical and Economic Aspects of Hydrogen Energy (Multi-Disciplinary)

Co-ordinators : Prof. Pratham Arora, Prof. Amit C. Bhosale

Lecture 1 - Introduction

Lecture 2 - Challenges with Fossil Fuels

Lecture 3 - Renewable Energy and Hydrogen

Lecture 4 - Energy Consumption in Different Countries

Lecture 5 - Energy Consumption in Different Sectors

Lecture 6 - Economic Modelling

Lecture 7 - The Current Market for Hydrogen - I

Lecture 8 - The Current Market for Hydrogen - II

Lecture 9 - Hydrogen Production from Fossil Fuels - I

Lecture 10 - Hydrogen Production from Fossil Fuels - II

Lecture 11 - The Cost of Hydrogen Production from Fossil Fuels - I

Lecture 12 - The Cost of Hydrogen Production from Fossil Fuels - II

Lecture 13 - Carbon Capture from Fossil Fuel-based Hydrogen

Lecture 14 - The Production of Hydrogen from Renewable Sources

Lecture 15 - The Economics of Hydrogen Production by Electrolysis

Lecture 16 - Hydrogen Production from Biomass

Lecture 17 - Economics of Hydrogen Production from Biomass

Lecture 18 - Biomass Lab

Lecture 19 - Introduction to fuel cell and electrolyzers

Lecture 20 - Thermodynamics of fuel cell and electrolyzers - I

Lecture 21 - Thermodynamics of fuel cell and electrolyzers - II

Lecture 22 - Variation in reversible potential and the Nernst Equation

Lecture 23 - Nernst equation and Numerical Problems - I

Lecture 24 - Numerical Problems - II

Lecture 25 - Numerical Problems - III

Lecture 26 - Characteristic curve (I-V) of a fuel cell

Lecture 27 - Potential losses in fuel cells and electrolyzers

Lecture 28 - Fuel cell efficiency and numerical problems

Lecture 29 - Significance of current and power density

Lecture 30 - Significance of cell components

Lecture 31 - Cell stacking

Lecture 32 - Fabrication of the membrane electrode assembly

Lecture 33 - Introduction to Reaction kinetics of fuel cell - I

Lecture 34 - Reaction kinetics of fuel cell - II

Lecture 35 - Butler-Volmer equation - I

Lecture 36 - Butler-Volmer equation - II

Lecture 37 - Butler-Volmer and Taffel Equation - III

Lecture 38 - Charge Transport mechanism in fuel cell and electrolyzers

Lecture 39 - Charge Transport mechanism and numerical problems

Lecture 40 - Ohmic losses and significance of interfacial contact resistance

Lecture 41 - Mass transport in fuel cell and electrolyzers - 1

Lecture 42 - Mass Transport: Relationship Between Current and Diffusive Flux

Lecture 43 - Concentration loss and numerical problems

Lecture 44 - Bipolar plates and different flow field designs

Lecture 45 - Scale-up issues in fuel cell and electrolyzers

Lecture 46 - Laboratory Demonstrations

Lecture 47 - Hydrogen Storage and Transport - I

Lecture 48 - Hydrogen Storage and Transport - II

Lecture 49 - Cost of Hydrogen Storage

Lecture 50 - Cost of Hydrogen Storage and Transport

Lecture 51 - Mass Shipping of Hydrogen - I

Lecture 52 - Mass Shipping of Hydrogen - II

Lecture 53 - Mass Shipping of Hydrogen - III

Lecture 54 - Competitive Position of Hydrogen versus Fossil Fuels

Lecture 55 - Case Studies for Hydrogen Economy

Lecture 56 - Process Simulation of Hydrogen Energy Systems

Lecture 57 - Introduction to Life-cycle Assessment - I

Lecture 58 - Introduction to Life-cycle Assessment - II

Lecture 59 - Introduction to Life-cycle Assessment - III

Lecture 60 - LCA of Hydrogen Energy Systems

Lecture 61 - Case Study

NPTEL : NOC:Teaching and Learning in Engineering (TALE) (Multi-Disciplinary)

Co-ordinators : Prof. N.J. Rao

Lecture 32 - Bilging - IV

Lecture 33 - Safety Regulations

Lecture 34 - Safety Regulations (Continued...)

Lecture 35 - Safety Regulations (Continued...)

Lecture 36 - Ship Stability on Waves

Lecture 37 - Ship Stability on Waves (Continued...)

Lecture 38 - Ship Stability on Waves (Continued...)

Lecture 39 - Wave Theory

Lecture 40 - Conclusion

NPTEL : Marine Construction and Welding (Ocean Engineering)

Co-ordinators : Prof. N.R. Mandal

Lecture 1 - Introduction to ships & offshore structures

Lecture 2 - Characteristics of shipbuilding industry

Lecture 3 - Structural Requirement

Lecture 4 - Basic Structural Components

Lecture 5 - Structural Subassemblies

Lecture 6 - Bulkheads

Lecture 7 - Decks & Shells

Lecture 8 - Structural Assemblies Double Bottom Construction

Lecture 9 - Wing Tanks & Duct Keels

Lecture 10 - Fore & Altend Construction

Lecture 11 - General Cargo Carrier

Lecture 12 - Bulk Carrier

Lecture 13 - Structural Details

Lecture 14 - Container Ship

Lecture 15 - RO-RO Ship

Lecture 16 - Oil Tanker

Lecture 17 - Structural Alignment & Continuity

Lecture 18 - Steel Material Preparation

Lecture 19 - Shot Blasting

Lecture 20 - Acid Pickling

Lecture 21 - Plate Cutting

Lecture 22 - Plate & Section Forming - I

Lecture 23 - Plate & Section Forming - II

Lecture 24 - Line Heating

Lecture 25 - Fusion Welding & Power Source

Lecture 26 - Welding Parameters & their Effects

Lecture 27 - Welding Methods

Lecture 28 - Shielded Metal Arc Welding

Lecture 29 - Gas Metal Arc Welding - I

Lecture 30 - Gas Metal Arc Welding - II

Lecture 31 - Gas Tungsten Arc Welding

Lecture 32 - Submerged Arc Welding

Lecture 33 - Electroslag Welding

Lecture 34 - Electrogas Welding

Lecture 35 - Friction Stir Welding

Lecture 36 - FSW Metallurgy

Lecture 37 - Welding Defects & NDT

Lecture 38 - Welding Distortions

Lecture 39 - Distortion Mechanism & Types of Distortion

Lecture 40 - Distortion Control & Mitigation

Lecture 41 - Welding Sequence

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Marine Hydrodynamics (Ocean Engineering)

Co-ordinators : Dr. T. Sahoo

Lecture 1 - Introduction to Marine Hydrodynamics

Lecture 2 - Law of Conservation of Mass - Continuity of Equation

Lecture 3 - Streamlines and Flow Direction

Lecture 4 - Worked Examples on Various Types of Flow

Lecture 5 - Equation of Motion (Law of Conservation of Momentum)

Lecture 6 - Applications of Equations of Motion

Lecture 7 - Applications of Equations of Motion (Continued...)

Lecture 8 - Two Dimensional Flows

Lecture 9 - Two Dimensional Flows (Continued...)

Lecture 10 - Source, Sink and Doublet

Lecture 11 - Worked Examples on Two Dimensional Flows

Lecture 12 - Conformal Mapping and Joukowsky Transformation

Lecture 13 - Uniform Flow Past an Elliptic Cylinder

Lecture 14 - Aerofoil theory

Lecture 15 - Aerofoil theory (Continued...)

Lecture 16 - Aerofoil theory (Continued...)

Lecture 17 - Schwarz - Christoffel Transformation

Lecture 18 - Motion of a cylinder

Lecture 19 - Vertex Motion

Lecture 20 - Irrotational Flow - A Bird's eyeview

Lecture 21 - Introduction to Water Waves

Lecture 22 - Basic Equation and Conditions of Water Waves

Lecture 23 - Water particle kinematics in wave motion

Lecture 24 - Capillary Gravity Waves

Lecture 25 - Linearised Long Wave Equation

Lecture 26 - Linearised Long Wave Equation (Continued...)

Lecture 27 - Wave motion in two layer fluids

Lecture 28 - Worked Examples on Wave Motion

Lecture 29 - Worked Examples on Wave Motion (Continued...)

Lecture 30 - Gravity wave transformation and energy rotation

Lecture 31 - Gravity wave transformation and energy rotation (Continued...)

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Gravity wave transformation and energy rotation (Continued...)

Lecture 33 - Navier - Stokes equation of motion

Lecture 34 - Analysis of Basic Flow Problems

Lecture 35 - Analysis of Basic Flow Problems (Continued...)

Lecture 36 - Unsteady unidirectional flows

Lecture 37 - Unsteady unidirectional flows (Continued...)

Lecture 38 - An introduction to Boundary Layer Theory

Lecture 39 - Solution methods for Boundary Layer Equations

Lecture 40 - Solutions Methods for Boundary Layer Equations (Continued...)

NPTEL : Seakeeping and Manoeuvring (Ocean Engineering)

Co-ordinators : Prof. Debabrata Sen

Lecture 1 - Regular Water Waves - I

Lecture 2 - Regular Water Waves - II

Lecture 3 - Definition of Ship Motions & Encounter Frequency

Lecture 4 - Single Degree of Freedom Motions in Regular Waves

Lecture 5 - Uncoupled Heave, Pitch and Roll - I

Lecture 6 - Uncoupled Heave, Pitch and Roll - II

Lecture 7 - Uncoupled Heave, Pitch and Roll - III

Lecture 8 - Uncoupled Heave, Pitch and Roll - IV

Lecture 9 - Uncoupled Heave, Pitch and Roll - V

Lecture 10 - Coupled Motions

Lecture 11 - Irregular Waves

Lecture 12 - Description of Irregular Waves by Spectrum

Lecture 13 - Theoretical Wave Spectrum

Lecture 14 - Ship Motion in Irregular Waves - I

Lecture 15 - Ship Motion in Irregular Waves - II

Lecture 16 - Ship Motion in Irregular Waves - III

Lecture 17 - Description of Short-Crested Sea

Lecture 18 - Motions in Short-Crested Sea

Lecture 19 - Derived Responses & Dynamic Effects - I

Lecture 20 - Derived Responses & Dynamic Effects - II

Lecture 21 - Derived Responses & Dynamic Effects - III

Lecture 22 - Seakeeping Considerations in Design

Lecture 23 - Manoeuvring: Introduction & Basic Equations

Lecture 24 - Dynamic Equations of Motion - I

Lecture 25 - Dynamic Equations of Motion - II

Lecture 26 - Hydrodynamic Derivatives

Lecture 27 - Controls-Fixed Stability

Lecture 28 - Stability & Cotrollability: Definitive Manoeuvres

Lecture 29 - Definitive Manoeuvres - I

Lecture 30 - Definitive Manoeuvres - II

Lecture 31 - Definitive Manoeuvres - III

Lecture 32 - Non-linear Equations of Motion

Lecture 33 - Non-linear Equations & Model Tests

Lecture 34 - Captive Model Tests and Experimental Determination of Hydrodynamic Derivatives

Lecture 35 - PMM Tests - I

Lecture 36 - PMM Tests - II

Lecture 37 - Rudder & Control Surfaces - I

Lecture 38 - Rudder & Control Surfaces - II

Lecture 39 - Theoretical Determination of Hydrodynamic Derivatives - I

Lecture 40 - Theoretical Determination of Hydrodynamic Derivatives - II

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Applied Thermodynamics for Marine Systems (Ocean Engineering)

Co-ordinators : Prof. P.K. Das

Lecture 1 - Introduction & Some Definitions

Lecture 2 - First Law of Thermodynamics (Closed System)

Lecture 3 - First Law of Thermodynamics (Open System)

Lecture 4 - Second Law of Thermodynamics

Lecture 5 - Second Law and Carnot Principle

Lecture 6 - Property of Pure Substance, Steam Table

Lecture 7 - Ideal Gas Laws, Different Processes

Lecture 8 - Introduction to Vapour Power Cycle

Lecture 9 - Vapour Power Cycle

Lecture 10 - Steam Power Cycle, Steam Nozzle

Lecture 11 - Basic Concept of Turbine, Velocity Diagram

Lecture 12 - Steam Turbine-Impulse

Lecture 13 - Reaction Turbine Compounding

Lecture 14 - Comparison of Different Staging Arrangement

Lecture 15 - Basics Laws of Fluid Mechanics

Lecture 16 - Pipe Friction, Major Loss, Minor Loss

Lecture 17 - Pipeline & Pipe Network

Lecture 18 - Refrigeration Vapour Compression Cycle

Lecture 19 - Psychometrics

Lecture 20 - Psychometrics (Continued...)

Lecture 21 - Psychometric Processes

Lecture 22 - Psychometric Processes (Continued...), Air Conditioning

Lecture 23 - Summer & Winter Air Conditioning

Lecture 24 - Gas Power Cycles, Cycles for IC Engines

Lecture 25 - Gas Turbine Cycles

Lecture 26 - Modification of Brayton Cycle

Lecture 27 - Introduction to Convective Heat Transfer Forced & Free Convection

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 31 - Probabilistic Risk Analysis

Lecture 32 - Safety Measures in Design and Process Operations

Lecture 33 - Case Studies

Lecture 34 - Case Studies (Continued...)

Lecture 35 - Software Used in HSE â€“ an Over View

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Port and Harbour Structures (Ocean Engineering)

Co-ordinators : Prof. R. Sundaravadivelu

Lecture 1 - Layout of ports

Lecture 2 - Continuation of layout of ports

Lecture 3 - Visakhapatnam port

Lecture 4 - Ships and size of ships

Lecture 5 - Port planning

Lecture 6 - Harbour layout

Lecture 7 - Site characteristics & navigation channel

Lecture 8 - Bathymetric survey

Lecture 9 - Tide, surge, tsunami and wave

Lecture 10 - Wave rose diagram

Lecture 11 - Breakwater

Lecture 12 - Design of breakwater - Part-1

Lecture 13 - Design of breakwater - Part-2

Lecture 14 - Berm breakwater

Lecture 15 - Dredging & methods of disposal

Lecture 16 - Berthing structures modelling

Lecture 17 - Berthing structures - analyses

Lecture 18 - Loads

Lecture 19 - Types of berthing structures

Lecture 20 - Design of berthing, structures-1

Lecture 21 - Design of offshore berthing, structures-1

Lecture 22 - Estimation of mooring, berthing and seismic forces

Lecture 23 - Estimation seismic forces

Lecture 24 - Active and passive earth pressure and differential water pressure

Lecture 25 - Load combinations and design

Lecture 26 - Fenders

Lecture 27 - Mechanical handling system

Lecture 28 - Single buoy mooring and open sea jetty - Part 1

Lecture 29 - Single buoy mooring and open sea jetty - Part 2

Lecture 30 - Slipway, drydock,floating dock, shiplift

Lecture 31 - Soil structure interaction

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Calulation of fixity depth

Lecture 33 - Pile load test

Lecture 34 - Ground improvement techniques

Lecture 35 - Analysis of pile with spring support

Lecture 36 - UPV,Half cell potential, Low high Integrity Test

Lecture 37 - Mooring Dolphin at KPT

Lecture 38 - Coastal structures and environmental management

Lecture 39 - BOQ and Cost Estimate

Lecture 40 - Proposed Mega Terminal Chennai

Lecture 41 - Preliminary Project Report on Shipyard

Lecture 42 - Procedures & clearances before implementation of a project

Lecture 43 - Detailed project report

Lecture 44 - Environmental studies of a project

Lecture 45 - Design of pile

Lecture 46 - Design and construction of diaphragm wall

Lecture 47 - Emprical relationship between spt and several soil properties

Lecture 48 - Model studies for a deep water port_case study

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Ship Resistance and Propulsion (Ocean Engineering)

Co-ordinators : Dr. P. Krishnankutty, Prof. V. Anantha Subramanian

Lecture 1 - Syllabus and Introduction

Lecture 2 - Seaway Effects on Resistance

Lecture 3 - Ship Types and Powering Aspects

Lecture 4 - Frictional Resistance and Turbulence Stimulation

Lecture 5 - Wave Making Resistance

Lecture 6 - Bulbous Bow on Ship Resistance

Lecture 7 - Air and Wind Resistance Dimensional Analysis - I

Lecture 8 - Dimensional Analysis - II, Model Tests and Ship Resistance Prediction Methods - I

Lecture 9 - Model Tests and Ship Resistance Prediction Methods - II

Lecture 10 - Model Tests and Ship Resistance Prediction Methods - III

Lecture 11 - Resistance in Shallow Water

Lecture 12 - Canal Effects on Resistance Holtrap-Mennen Method for Ship Resistance Prediction

Lecture 13 - Ship Resistance Prediction Methods - I

Lecture 14 - Ship Resistance Prediction Methods - II

Lecture 15 - Resistance of Advanced Marine Vehicles - I

Lecture 16 - Resistance of Advanced Marine Vehicles - II

Lecture 17 - Resistance of Advanced Marine Vehicles - III

NPTEL : Coastal Engineering (Ocean Engineering)

Co-ordinators : Prof. V. Sundar

Lecture 1 - Wave deformation - I

Lecture 2 - Wave deformation - II

Lecture 3 - wave deformation (problems - I)

Lecture 4 - wave deformation (problems - II)

Lecture 5 - wave deformation (problems - III)

Lecture 6 - Sediment charecteristics - I

Lecture 7 - Sediment charecteristics - II

Lecture 8 - Radiation stresses - I

Lecture 9 - Radiation stresses - II

Lecture 10 - Longshore sediment transport - I

Lecture 11 - Longshore sediment transport - II

Lecture 12 - Longshore sediment transport (problems - I)

Lecture 13 - Longshore sediment transport (problems - II)

Lecture 14 - Coastal erosion protection measures - I

Lecture 15 - Coastal erosion protection measures - II

Lecture 16 - Coastal erosion protection measures - III

Lecture 17 - Coastal erosion protection measures - IV

Lecture 18 - Coastal erosion protection measures - V

Lecture 19 - Coastal erosion protection measures - VI

Lecture 20 - Coastal erosion protection measures - VII

Lecture 21 - Coastal erosion protection measures - VIII

Lecture 22 - Coastal erosion protection measures - IX

Lecture 23 - Coastal erosion protection measures - X

Lecture 24 - Cheaper CEP methods - XI

Lecture 25 - Geosynthetics - I

Lecture 26 - Geosynthetics - II

Lecture 27 - Breakwaters - I

Lecture 28 - Breakwaters - II

Lecture 29 - Breakwaters - III

Lecture 30 - Breakwaters - IV

Lecture 31 - Forces on coastal structures - I

Lecture 32 - Forces on coastal structures - II

Lecture 33 - Scour under marine structures

Lecture 34 - Physical modelling of coastal structures - I

Lecture 35 - Physical modelling of coastal structures - II

Lecture 36 - Tsunami - I

Lecture 37 - Tsunami - II

NPTEL : Wave Hydrodynamics (Ocean Engineering)

Co-ordinators : Prof. V. Sundar

Lecture 1 - Basic Fluid Dynamics - I

Lecture 2 - Basic Fluid Dynamics - II

Lecture 3 - Introduction

Lecture 4 - Wave Motion - I

Lecture 5 - Wave Motion - II

Lecture 6 - Wave Motion - III

Lecture 7 - Wave Motion Problems

Lecture 8 - Standing Wave Theory

Lecture 9 - Wave Deformation - I

Lecture 10 - Wave Deformation - II

Lecture 11 - Wave Deformation and Problems

Lecture 12 - Random Waves

Lecture 13 - Random Waves and Problems - I

Lecture 14 - Random Waves and Problems - II

Lecture 15 - Random Waves and Problems - III

Lecture 16 - Simulation of Random Waves

Lecture 17 - Directional waves

Lecture 18 - Wave Loads on Structures - I

Lecture 19 - Wave Loads on Structures - II

Lecture 20 - Wave Loads on Structures and Problems - I

Lecture 21 - Wave Loads on Structures and Problems - II

Lecture 22 - Wave loads on Large Boides

Lecture 23 - Finite Amplitude Wave Theories

Lecture 24 - Hydrodynamic Testing Facility

Lecture 25 - Hydrodynamic Testing Facility at IITM

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Ocean Structures and Materials (Ocean Engineering)

Co-ordinators : Dr. Srinivasan Chandrasekaran

Lecture 1 - Introduction and objectives

Lecture 2 - Fixed type offshore structures

Lecture 3 - Compliant type offshore structures - I

Lecture 4 - Compliant type offshore structures - II

Lecture 5 - Drill ships and basics of drilling

Lecture 6 - Subsea production systems

Lecture 7 - Environmental loads - I

Lecture 8 - Environmental loads - II

Lecture 9 - Types of coastal structures - I

Lecture 10 - Types of coastal structures - II

Lecture 11 - Summary of coastal structures

Lecture 12 - Tutorials on Module - I

Lecture 13 - Outline of planning of ocean structures

Lecture 14 - Introduction to design

Lecture 15 - Construction techniques

Lecture 16 - Dredging - I

Lecture 17 - Dredging - II

Lecture 18 - Uncertainties in analysis and design

Lecture 19 - Design adequacy - Example I

Lecture 20 - Design adequacy - Example II

Lecture 21 - Dredging equipments' specifications

Lecture 22 - Ocean Pollution

Lecture 23 - Foundation and sea bed anchors

Lecture 24 - Introduction to materials - I

Lecture 25 - Introduction to materials - II

Lecture 26 - Concrete in marine environment

Lecture 27 - Concrete: problems and solutions

Lecture 28 - Repair materials for marine structures

Lecture 29 - Corrosion in concrete - I

Lecture 30 - Corrosion in concrete - II

Lecture 31 - Material sin repair and rehabilitation

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Materials for special repair

Lecture 33 - New materials for coastal embankments - I

Lecture 34 - New materials for coastal embankments - II

Lecture 35 - Non-destructive testing

Lecture 36 - Structural health monitoring

Lecture 37 - Wireless sensor networking

Lecture 38 - Repair and rehabilitation-Fenders

NPTEL : Dynamics of Ocean Structures (Ocean Engineering)

Co-ordinators : Dr. Srinivasan Chandrasekaran

Lecture 1 - Introduction to different types of ocean structures - I

Lecture 2 - Introduction to different types of ocean structures - II

Lecture 3 - Introduction to different types of ocean structures - III

Lecture 4 - Types of Compliant towers

Lecture 5 - New Generation offshore and Coastal structures

Lecture 6 - Environmental forces

Lecture 7 - Wave forces, Current

Lecture 8 - Introduction to Structural dynamics

Lecture 9 - Characteristics of single degree - of - freedom model

Lecture 10 - Methods of writing equation of motion

Lecture 11 - Free and forced vibration of single degree - of - freedom systems

Lecture 12 - Undamped and damped systems - I

Lecture 13 - Undamped and damped systems - II

Lecture 14 - Undamped and damped systems - III

Lecture 15 - Comparison of methods

Lecture 16 - Examples

Lecture 17 - Numerical problems in single degree - of - freedom systems

Lecture 18 - Two degrees - of - freedom systems

Lecture 19 - Eigenvalues and Eigenvectors

Lecture 20 - Orthogonality of modes

Lecture 21 - Study of Multi degrees - of - freedom systems

Lecture 22 - Equations of motion

Lecture 23 - Natural frequencies and mode shapes

Lecture 24 - Stodla, Rayleigh - Ritz and influence coefficient methods, Dunkerley

Lecture 25 - Continuous system

Lecture 26 - Structural action of offshore structures

Lecture 27 - Fluid - Structure interaction - I

Lecture 28 - Fluid - Structure interaction - II Dynamic analysis of offshore jacket platforms

Lecture 29 - Steps of analysis using software

Lecture 30 - Steps of analysis using software (Continued...)

Lecture 31 - Dynamic analysis of articulated towers

Lecture 32 - Iterative frequency domain - I

Lecture 33 - Iterative frequency domain - II

Lecture 34 - Multi - legged articulated towers

Lecture 35 - Response control of multi-legged articulated towers using tuned mass dampers Experimental and analytical studies on MLAT

Lecture 36 - Development of Tension Leg Platforms and geometric optimization

Lecture 37 - Dynamic analyses of TLPs

Lecture 38 - Development of Mass, stiffness and damping matrices of TLP from first principles

Lecture 39 - Estimate of classical damping

Lecture 40 - TLPs under seismic excitation

Lecture 41 - Direct Integration method

Lecture 42 - Development of new generation offshore structures

Lecture 43 - Introduction to stochastic dynamics of ocean structures

Lecture 44 - Response spectrum

Lecture 45 - Narrow band process

Lecture 46 - Return period, Fatigue prediction

Lecture 47 - Modal response method, Modal mass contribution

Lecture 48 - Missing mass correction, Example problems

Lecture 49 - Duhamel's integral

NPTEL : Advanced Marine Structures (Ocean Engineering)

Co-ordinators : Dr. Srinivasan Chandrasekaran

Lecture 1 - Introduction and Scope

Lecture 2 - Fixed type structures

Lecture 3 - Compliant type structures

Lecture 4 - New generation marine structures

Lecture 5 - Environmental loads - I

Lecture 6 - Environmental loads - II

Lecture 7 - Environmental loads - III

Lecture 8 - Environmental loads - IV

Lecture 9 - Other loads - I

Lecture 1 - Introduction

Lecture 2 - DNA packing and structure

Lecture 3 - Shape and function

Lecture 4 - Numbers and sizes

Lecture 5 - Spatial scales and System variation

Lecture 6 - Timescales in Biology

Lecture 7 - Random walks and Passive diffusion

Lecture 8 - Random walks to model Biology

Lecture 9 - Derivation of FRAP equations

Lecture 10 - Drift-diffusion equations

Lecture 11 - Solutions of the drift-diffusion equations

Lecture 12 - The cell signaling problem

Lecture 13 - Cell Signalling and Capture Probability of absorbing sphere

Lecture 14 - Capture probability of reflecting sphere

Lecture 15 - Mean capture time

Lecture 16 - Introduction to fluids, viscosity and reynolds number

Lecture 17 - Introduction to the navier stokes equation

Lecture 18 - Understanding reynolds number

Lecture 19 - Life at low reynolds number

Lecture 20 - Various phenomena at low reynolds number

Lecture 21 - Bacterial flagellar motion

Lecture 22 - Rotating flagellum

Lecture 23 - Energy and equilibrium

Lecture 24 - Binding problems

Lecture 25 - Transcription and translation

Lecture 26 - Internal states of macromolecules

Lecture 27 - Protein modification problem

Lecture 28 - Haemoglobin-Oxygen binding problem

Lecture 29 - Freely jointed polymer model

Lecture 30 - Entropic springs and persistence length

Lecture 31 - Freely rotating chain model and radius of gyration

Lecture 32 - The hierarchical chromatin packing model

Lecture 33 - FISH and DNA looping

Lecture 34 - Nucleosomes as barriers, Hi-C, and contact probabilities

Lecture 35 - Deriving the full force extension curve

Lecture 36 - Random walk models for proteins

Lecture 37 - Hydrophobic polar protein model

Lecture 38 - Diffusion in crowded environments

Lecture 39 - Depletion interactions

Lecture 40 - Examples and implications of depletion interactions

Lecture 41 - Introduction to Biological dynamics

Lecture 42 - Introduction to rate equations

Lecture 43 - Separation of timescales in enzyme kinetics

Lecture 44 - Structure and treadmilling of actins and microtubules

Lecture 45 - Average length of polymers in equilibrium

Lecture 46 - Growth rate of polymers

Lecture 47 - Dynamic treadmilling in microtubules

Lecture 48 - Introduction to molecular motors

Lecture 49 - Force generation by molecular motors

Lecture 50 - Models of motor motion

Lecture 51 - molecular motors

Lecture 52 - Free energies of motor for stepping

Lecture 53 - Two state models

Lecture 54 - cooperative transport of cargo

Lecture 55 - Cytoskeleton as a motor

Lecture 56 - translocation ratchet

Lecture 57 - Spatial pattern in biology

Lecture 58 - Some common spatial patterns in biology

Lecture 59 - reaction diffusion and spatial pattern

Lecture 60 - Pattern formation in reaction diffusion system with stability

Lecture 61 - Condition for destablization in pattern formation

Lecture 62 - Schnakenberg kinetics

Lecture 1 - Introduction - I

Lecture 2 - Introduction - II

Lecture 3 - Normal subgroup, Coset, Conjugate group

Lecture 4 - Factor group, Homomorphism, Isomorphism

Lecture 5 - Factor group, Homomorphism, Isomorphism

Lecture 6 - Conjugacy Classes

Lecture 7 - Permutation Groups

Lecture 8 - Cycle Structure

Lecture 9 - Cycle Structure (Continued...)

Lecture 10 - Young Diagram and Molecular Symmetry

Lecture 11 - Point Groups

Lecture 12 - Symmetries of Molecules, Schoenflies Notation

Lecture 13 - Symmetries of Molecules, Stereographic Projection

Lecture 14 - Examples of Molecular Symmetries and Proof of Cayley Theorem

Lecture 15 - Matrix Representation of Groups - I

Lecture 16 - Matrix Representation of Groups - II

Lecture 17 - Reducible and Irreducible Representation - I

Lecture 18 - Reducible and Irreducible Representation - II

Lecture 19 - Great Orthogonality Theorem and Character Table - I

Lecture 20 - Great Orthogonality Theorem and Character Table - II

Lecture 21 - Mulliken Notation, Character Table and Basis

Lecture 22 - Tensor Product of Representation

Lecture 23 - Tensor Product and Projection Operator - I

Lecture 24 - Tensor Product and Projection Operator - II

Lecture 25 - Tensor Product and Projection Operator with an example

Lecture 26 - Binary Basis and Observables

Lecture 27 - Selection Rules

Lecture 28 - Selection Rules and Molecular Vibrations

Lecture 29 - Molecular vibration normal modes: Classical Mechanics approach

Lecture 30 - Molecular vibration normal modes: Group Theory approach

Lecture 31 - Molecular vibration modes using projection operator

Lecture 32 - Vibrational representation of character

Lecture 33 - Infrared Spectra and Raman Spectra

Lecture 34 - Introduction to continuous group

Lecture 35 - Generators of translational and rotational transformation

Lecture 36 - Generators of Lorentz transformation

Lecture 37 - Introduction to O(3) and SO(3) group

Lecture 38 - SO(n) and Lorentz group

Lecture 39 - Generalised orthogonal group and Lie algebra

Lecture 40 - Subalgebra of Lie algebra

Lecture 41 - gl(2,C) and sl(2,C) group

Lecture 42 - U(n) and SU(n) group

Lecture 43 - Symplectic group

Lecture 44 - SU(2) and SU(3) groups

Lecture 45 - Rank, weight and weight vector

Lecture 46 - Weight vector, root vector, comparison between SU(2) and SU(3) algebra

Lecture 47 - Root diagram, simple roots, adjoint representation

Lecture 48 - SU(2) sub-algebra, Dynkin diagrams

Lecture 49 - Fundamental weights, Young diagrams, dimension of irreducible representation

Lecture 50 - Young diagrams and tensor products

Lecture 51 - Tensor product, Wigner - Eckart theorem

Lecture 52 - Tensor product of irreducible representation 1: Composite objects from fundamental particles

Lecture 53 - Tensor product of irreducible representation 2: Decimet and octet diagrams in the Quark Model

Lecture 54 - Clebsch - Gordan coefficients

Lecture 55 - 1) Quadrupole moment tensor (Wigner-Eckart theorem) 2) Decimet Baryon wavefunction

Lecture 56 - Higher dimensional multiplets in the quark model

Lecture 57 - Symmetry breaking in continuous groups

Lecture 58 - Dynamical symmetry in hydrogen atom: SO(4) algebra

Lecture 59 - Hydrogen atom energy spectrum and degeneracy using Runge-Lenz vector

NPTEL : NOC:Neutron Scattering for Condensed Matter Studies (Physics)

Co-ordinators : Prof. Saibal Basu

Lecture 1 - Neutrons as Probe of Condensed Matter

Lecture 2 - Sources for thermal neutrons used in neutron scattering

Lecture 3

Lecture 4 - Calculating Neutron Scattering cross-section

Lecture 5

Lecture 6 - Scattering theory and introducing dynamics in the formalism

Lecture 7 - Scattering theory and introducing dynamics in the formalism

Lecture 8 - Scattering theory and introducing dynamics in the formalism

Lecture 9 - Scattering law's correlation with double-Fourier transform of real space correlation function

Lecture 10 - Scattering law's correlation with double-Fourier transform of real space correlation function

Lecture 11 - Correlation function to resolution and accessible(Q,Ãâ€°). Introducing experimental facilities

Lecture 12 - Correlation function to resolution and accessible(Q,Ãâ€°). Introducing experimental facilities

Lecture 13 - Correlation function to resolution and accessible(Q,Ãâ€°). Introducing experimental facilities

Lecture 14 - Correlation function to resolution and accessible(Q,Ãâ€°). Introducing experimental facilities

Lecture 15 - Introducing resolution and components of neutron scattering facilities.

Lecture 16 - Introducing resolution and components of neutron scattering facilities.

Lecture 17 - Continue with neutron scattering set up and its components like collimators, filters, detectors etc

Lecture 18 - Continue with neutron scattering set up and its components like collimators, filters, detectors etc

Lecture 19 - Describe the operation of various kinds of neutron detectors

Lecture 20 - Describe the operation of various kinds of neutron detectors

Lecture 21 - Introducing neutron choppers, velocity selectors and polarizers, some important components of beam tailoring devices

Lecture 22 - Introducing neutron choppers, velocity selectors and polarizers, some important components of beam tailoring devices

Lecture 23 - Neutron polarizers and spin-flippers

Lecture 24 - Neutron polarizers and spin-flippers

Lecture 25 - Diffraction at various length scales at a reactor and at a spallation neutron source

Lecture 26 - Diffraction at various length scales at a reactor and at a spallation neutron source

Lecture 27 - Application of neutron crystallography

Lecture 28 - Application of neutron crystallography

Lecture 29 - Magnetism in solids

Lecture 30 - Magnetism in solids

Lecture 31 - Magnetic interaction in solids and magnetic neutron diffarction

Lecture 32 - Magnetic interaction in solids and magnetic neutron diffarction

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Creation and annihilation operators - Photons

Lecture 33 - Creation and annihilation operators - Many-body physics

Lecture 34 - Particle and Hole Green functions

Lecture 35 - Current Algebra

Lecture 36 - Tight Binding Models - I

Lecture 37 - Tight Binding Models - II

Lecture 38 - Order Parameters

Lecture 39 - Schrieffer Wolff Transformation

Lecture 40 - Matsubara Green functions - I

Lecture 41 - Matsubara Green functions - II

Lecture 42 - Self Energy and Spectral Functions

Lecture 43 - S-Matrix Perturbation Theory

Lecture 44 - Keldysh Contour

Lecture 45 - Bosonic Coherent States

Lecture 46 - Fermionic Coherent States

Lecture 47 - Nonlocal particle hole operators - Bosons

Lecture 48 - Nonlocal particle hole operators - Fermions

NPTEL : NOC:Quantum Hall Effects (Physics)

Co-ordinators : Prof. Saurabh Basu

Lecture 1 - Conductance in Nanostructures

Lecture 2 - S-Matrix, Reflection and Transmission

Lecture 3 - Introduction to Classical and Quantum Hall Effect

Lecture 4 - Quantum Hall Effect

Lecture 5 - Landau Levels

Lecture 6 - Degenracy of Landau levels

Lecture 7 - Shubnikov de Haas Oscillations

Lecture 8 - Kubo Formula

Lecture 9 - Symmetric gauge

Lecture 10 - Tight binding model, Hofstadter Butterfly

Lecture 11 - Topological Invariant, Chern number

Lecture 12 - Electronic structure of Graphene

Lecture 13 - Low energy Dispersion

Lecture 14 - Dirac Hamiltonian, Hofstadter Butterfly

Lecture 15 - QHE, Landau Levels

Lecture 16 - Properties of Spin angular Momentum, Spin Hall Effect

Lecture 17 - Quantum spin Hall insulator, Kene-Mele Model

Lecture 18 - Kene-Mele Model

Lecture 19 - Landau gauge in fractional quantum Hall effect

Lecture 20 - Laughlin States, Properties

Lecture 21 - Plasma analogy

Lecture 22 - Composite Fermions, Hierarchy

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Quantum Entanglement: Fundamentals, Measures and Applications (Physics)

Co-ordinators : Prof. Amarendra Kumar Sarma

Lecture 1 - Introduction

Lecture 2 - Review of Quantum Mechanics

Lecture 3 - Mathematical Tools: Density Matrix - Part 1

Lecture 4 - Mathematical Tools: Density Matrix - Part 2

Lecture 5 - Problem solving session - 1

Lecture 6 - Basic Technical Introduction to Quantum Entanglement

Lecture 7 - Schmidt Decomposition Method

Lecture 8 - The EPR Paradox and Bell Inequalities

Lecture 9 - Problem solving session - 2

Lecture 10 - Quantum Measurements

Lecture 11 - Properties of Quantum Entanglement

Lecture 12 - Quantum Entanglement Measures - I

Lecture 13 - Problem solving session - 3

Lecture 14 - Quantum Entanglement Measures - II

Lecture 15 - Applications of Quantum Entanglement - I

Lecture 16 - Applications of Quantum Entanglement - II

Lecture 17 - Problem solving session - 4

NPTEL : NOC:Introduction to Electromagnetism (Physics)

Co-ordinators : Prof. Manoj K Harbola

Lecture 1 - Coloumb's Law

Lecture 2 - Coloumb's Force due to several Point charges

Lecture 3 - Force due to distribution of Charges

Lecture 4 - What is an Electric Field?

Lecture 5 - Electric Field due to a Charged Distribution

Lecture 6 - Helmholtz's Theorem for Electric Field

Lecture 7 - Divergence of a Field

Lecture 8 - Divergence of Electric Field & Gauss's Law

Lecture 9 - Curl Of a Field - I

Lecture 10 - Curl of a Field - II & Stokes' Theorem

Lecture 11 - Line surface area & volume elements in Cartesian & Cylindrical Coordinates

Lecture 12 - Line surface area & volume elements in Spherical Polar Coordinates

Lecture 13 - Examples of application of the divergence and stokes' theorems

Lecture 14 - Electrostatic Potential

Lecture 15 - Electric field as the gradient of electrostatic potential

Lecture 16 - Laplace's and Poisson's equations for electrostatic potential

Lecture 17 - Elecrostatic potential due to a charge distribution - I; a line charge of finite length

Lecture 18 - Elecrostatic potential due to a charge distribution - II;a ring and a spherical shell of charge

Lecture 19 - Uniqueness of the solution of Laplace's and Poisson's equations

Lecture 20 - Method of images I: point charge in front of a grounded metallic plane - I

Lecture 21 - Method of imagesII: point charge in front of a grounded metallic plane and grounded metal sphere

Lecture 22 - Laplaces equations in some other physical phenomena

Lecture 23 - Energy of a charge distribution - I

Lecture 24 - Energy of a charge distribution - II An example

Lecture 25 - Energy of a charge distribution - III Energy density in terms of electric field

Lecture 26 - Electric field and potential in a conductor

Lecture 27 - Reciprocity theorem for conductors - I

Lecture 28 - Reciprocity theorem for conductors - II

Lecture 29 - Electric polarization and bound charges - I

Lecture 30 - Electric polarization and bound charges - II

Lecture 31 - Electric Displacement

Lecture 32 - Elecrostatics in presence of Dielectric Materials - I

Lecture 33 - Elecrostatics in presence of Dielectric Materials - II

Lecture 34 - Introduction to Magnetostatics; The BiO-Savart law

Lecture 35 - Divergence and curl of Magnetic Field

Lecture 36 - Amperes law for Magnetic Fields

Lecture 37 - Vector Potential for Magnetic Fields

Lecture 38 - Calculation of Vector Potential for a given magnetic field

Lecture 39 - Equation for the Vector Potentialin terms of current density

Lecture 40 - Vector potential from Current Densities - I

Lecture 41 - Vector potential from Current Densities - II

Lecture 42 - Magnetic Materials - I

Lecture 43 - Magnetic Materials - II Bound Current Densities

Lecture 44 - The Auxiliary Field - H

Lecture 45 - Solving for Magnetic Field of a magnet - I

Lecture 46 - Solving for Magnetic Field of a magnet in presence of Magnetic Materials

Lecture 47 - Faradays Law

Lecture 48 - Induced Electric field due to changing Magnetic Field

Lecture 49 - Demonstrations on faradays law, Lenzs law and Nonconservative nature of Induced electric field

Lecture 50 - Energy stord in a magnetic Field-I

Lecture 51 - Energy stord in a magnetic Field-I;solved examples

Lecture 52 - Displacement Current

Lecture 53 - Quasistatic approximation

Lecture 54 - Energy transport by electromagnetic fields; The Poynting Vector

Lecture 55 - The Poynting Vector;solved examples

Lecture 56 - Linear Momentum and Angular Momentum carried by Electromagnetic Fields

NPTEL : NOC:Engineering Mechanics (Physics)

Co-ordinators : Prof. Manoj K Harbola

Lecture 1 - Introduction to Vectors

Lecture 2 - Addition and subtraction of vectors

Lecture 3 - Multiplying vectors

Lecture 4 - Introduction to vectors: solved examples - I

Lecture 5 - Transformation of vectors under rotation

Lecture 6 - Vector products and their geometric interpretation

Lecture 7 - Vector Product: Kronecker Delta and Levi-Civita symbols - I

Lecture 8 - Vector Product: Kronecker Delta and Levi-Civita symbols - II

Lecture 9 - Introduction to vectors: solved examples - II

Lecture 10 - Equilibrium of rigid bodies Â– Forces and torques

Lecture 11 - Calculating torques and couple moments - I

Lecture 12 - Calculating torques and couple moments - II

Lecture 13 - Finding a force and a couple equivalent to an applied force

Lecture 14 - Different elements and associated forces and torques - I

Lecture 15 - Different elements and associated forces and torques - II

Lecture 16 - Solved examples; equilibrium of bodies Â– I

Lecture 17 - Solved examples; equilibrium of bodies Â– II

Lecture 18 - Forces in different geometric configuration

Lecture 19 - Plane trusses I - building a truss and condition for it to be statically determinate

Lecture 20 - Plane trusses II - calculating forces in a simple truss and different types of trusses

Lecture 21 - Plane trusses III - calculating forces in a simple truss by method of joints

Lecture 22 - Plane trusses IV- Solved examples for calculating forces in a simple truss by method of joints

Lecture 23 - Plane trusses V - Solved examples for calculating forces in a simple truss by method of joints

Lecture 24 - Plane trusses VI - method of sections for calculating forces in a simple truss

Lecture 25 - Dry friction I - introduction with an example

Lecture 26 - Dry friction II - a solved example

Lecture 27 - Dry friction III - Dry thrust bearing and belt friction with demonstration

Lecture 28 - Dry friction IV - Screw friction and rolling friction

Lecture 29 - Dry friction V - Solved examples

Lecture 30 - Properties of plane surfaces I - First moment and centroid of an area

Lecture 31 - Properties of plane surfaces II - Centroid of an area made by joining several plane surfaces

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Properties of plane surfaces III - Centroid of a distributed force and its relation with centre of gravity

Lecture 33 - Properties of plane surfaces IV - solved examples of calculation of first moment and centroid of distributed forces

Lecture 34 - Properties of plane surfaces V- Second moment and product of an area and radius of gyration

Lecture 35 - Properties of plane surfaces VI - Parallel axis transfer theorem for second moment and product of an area

Lecture 36 - Properties of plane surfaces VII - transformation of second moment and product of an area under rotation of coordinate axes

Lecture 37 - Properties of plane surfaces VIII - second moment and product of an area, solved examples

Lecture 38 - Method of virtual work I - degrees of freedom, constraints and constraint forces

Lecture 39 - Method of virtual work II - virtual displacement, virtual work and equilibrium condition in terms of virtual work

Lecture 40 - Method of virtual work III - solved examples

Lecture 41 - Motion of a particle in a plane in terms of planar polar coordinates

Lecture 42 - Planar polar coordinates: solved examples

Lecture 43 - Description of motion in cylindrical and spherical coordinate systems

Lecture 44 - Using planar polar, cylindrical and spherical coordinate systems: solved examples

Lecture 45 - Motion with constraints, constraint forces and free body diagram

Lecture 46 - Motion with constraints Â– solved examples

Lecture 47 - Motion with dry friction Â– solved examples

Lecture 48 - Motion with drag Â– solved examples

Lecture 49 - Equation of motion in terms of linear momentum and the principle of conservation of linear momentum

Lecture 50 - Linear momentum and centre of mass

Lecture 51 - Momentum transfer, impulse and force due to a stream of particles hitting an object

Lecture 52 - Momentum and the variable mass problem

Lecture 53 - Linear momentum Â– solved examples

Lecture 54 - Work and energy I - work energy theorem; conservative and non-conservative force fields

Lecture 55 - Work and energy II - Definition of potential energy for conservative forces; total mechanical energy and the principle of conservation of energy

Lecture 56 - Work and energy III - Two solved examples using conservation principles

Lecture 57 - Work and energy IV Â– Further discussion on potential energy

Lecture 58 - Work and energy V - Solved examples

Lecture 59 - Work and energy VI Â– Applying conservation principles to solve a collision problem

Lecture 60 - Work and energy VII - Solved examples

Lecture 61 - Rigid body motion I - degrees of freedom and number of variables required to describe motion of a rigid body

Lecture 62 - Rigid body motion II - Equation of motion for a single particle in terms of angular momentum and torque; motion of a conical pendulum

Lecture 63 - Rigid body motion III - Conservation of angular momentum; angular momentum for a collection of particles

Lecture 64 - Rigid body motion IV - applying angular momentum conservation, a solved example

Lecture 65 - Rigid body motion V (fixed axis rotation) - some demonstrations of conservation of angular momentum about fixed axis

Lecture 66 - Rigid body motion VI (fixed axis rotation) - Some more demonstrations and related problems

Lecture 67 - Rigid body motion VII (fixed axis rotation) - Kinetic energy and moment of inertia for fixed axis rotation and some solved examples

Lecture 68 - Rigid body motion VIII (fixed axis rotation) - solved examples for calculating moment of inertia and conservation of angular momentum

Lecture 69 - Rigid body motion IX (fixed axis rotation) - solved examples

Lecture 70 - Rigid body motion X - rotation and translation with axis moving parallel to itself

Lecture 71 - Rigid body motion XI - solved examples for rotation and translation with axis moving parallel to itself

Lecture 72 - Rigid-body dynamics XII - Some demonstrations on general motion of rigid bodies

Lecture 73 - Rigid-body dynamics XIII - Infinitesimal angles as vector quantities and change of a vector when rotated by an infinitesimal angle

Lecture 74 - Rigid-body dynamics XIV - Angular velocity and the rate of change of a rotating vector; relating change in angular velocity to an applied torque

Lecture 75 - Rigid-body dynamics XV - Relationship between angular momentum and angular velocity Â– the moment of inertia tensor and the principal axes

Lecture 76 - Rigid-body dynamics XVI - Solved examples

Lecture 77 - Rigid body motion XVII Â– A review of the relation between angular momentum and angular velocity, moment of inertia tensor and the principal axes Edit Lesson

Lecture 78 - Rigid body motion XVIII- Solved examples for calculating rate of change of angular momentum and torque when angular velocity and angular momentum are not parallel

Lecture 79 - Rigid body dynamics XIX - understanding demonstrations shown earlier using equation of motion

Lecture 80 - Rigid body dynamics XX - understanding demonstrations shown earlier using equation of motion (Euler equations)

Lecture 81 - Rigid body dynamics XXI - Euler equations, solved examples

Lecture 82 - Simple harmonic motion I - expanding potential energy about the equilibrium point and the corresponding force

Lecture 83 - Simple harmonic motion II - solving the equation of motion with given initial conditions

Lecture 84 - Simple harmonic motion III - solved examples

Lecture 85 - Simple harmonic motion IV - representing simple harmonic motion on a phasor diagram; energy of an oscillator

Lecture 86 - Simple harmonic motion V - solved examples

Lecture 87 - Simple harmonic motion VI - solving the equation of motion with constant friction in the system

Lecture 88 - Simple harmonic motion VII - harmonic oscillator with velocity-dependent damping (heavy damping)

Lecture 89 - Simple harmonic motion VIII - harmonic oscillator with velocity-dependent damping (critical damping)

Lecture 90 - Simple harmonic motion IX - solved examples

Lecture 91 - Simple harmonic motion X - harmonic oscillator with velocity-dependent damping (light damping)

Lecture 92 - Simple harmonic motion XI - solved examples

Lecture 93 - Simple harmonic motion XII - oscillations of an un-damped harmonic oscillator subjected to an oscillatory force

Lecture 94 - Simple harmonic motion XIII - oscillations of a forced damped harmonic oscillator - I

Lecture 95 - Simple harmonic oscillator XIV - oscillations of a forced damped harmonic oscillator - II

Lecture 96 - Simple harmonic oscillator XV - Energy and power in a forced damped harmonic oscillator

Lecture 97 - Simple harmonic oscillator XVI - Solved examples

Lecture 98 - Equation of motion in a uniformly accelerating frame

Lecture 99 - Motion described in a uniformly accelerating frame; solved examples - I

Lecture 100 - Motion described in a uniformly accelerating frame; solved examples - II

Lecture 17

Lecture 18

Lecture 19 - Electronic Contribution to the Specific heat of a Solid - Part 1

Lecture 20 - Electronic Contribution to the Specific heat of a Solid - Part 2

Lecture 21 - Electronic Contribution to the Specific heat of a Solid - Part 3

Lecture 22 - Electronic Contribution to the Specific heat of a Solid - Part 4

Lecture 23 - Understanding Thermal conductivity of Metals

Lecture 24 - Introduction to Magnetism in Metal - Part 1

Lecture 25 - Introduction to Magnetism in Metal - Part 2

Lecture 26

Lecture 27 - Introduction to crystals and bonding in crystals

Lecture 28 - Understanding crystal structure using Bravais Lattice

Lecture 29 - Bravais Lattice Types - Part 1

Lecture 30 - Bravais Lattice Types - Part 2

Lecture 31 - Introduction to different crystal types - Part 1

Lecture 32 - Introduction to different crystal types - Part 2

Lecture 33 - Indexing crystal planes

Lecture 34 - Scattering of X rays from crystals - Part 1

Lecture 35 - Scattering of X rays from crystals - Part 2

Lecture 36 - Reciprocal lattice vectors - Part 1

Lecture 37 - Reciprocal lattice vectors - Part 2

Lecture 38 - Reciprocal lattice vectors and Laue's condition for diffraction of waves in crystals - Part 1

Lecture 39 - Reciprocal lattice vectors and Laue's condition for diffraction of waves in crystals - Part 2

Lecture 40 - Reciprocal lattice vectors, Laue's condition and Bragg's law for diffraction of waves by a crystal

Lecture 41 - Wave equation in a continuous medium and generalization to a discrete medium

Lecture 42 - Derivation of wave equation for motion of atoms in a crystal

Lecture 43 - Solution of the wave equation for a crystal and the relation between frequency Ãâ€° and wavevector k

Lecture 44 - Group velocity of waves and speed of sound in a crystal

Lecture 45 - Waves in a crystal considering interaction among atoms beyond their nearest neighbours

Lecture 46 - Normal modes in a crystal : Phonons and their momenta and energy

Lecture 47 - Experimental determination of Phonon dispersion curves

Lecture 48 - Lattice with two atom basis: Optical Phonons

Lecture 49 - Displacement of the atoms for the acoustic and optical Phonons

Lecture 50 - Density of states of phonons

Lecture 51 - Calculating the density of states of Phonons: The Einstein's and the Debye's Models

Lecture 52 - Average energy of Phonons at Temperature T

Lecture 53 - Debye's Model of specific heat of crystals

Lecture 54 - Anharmonic effects in crystals: thermal expansion and Umkclapp processes

Lecture 55 - Going beyond free electron model: Periodic crystal potential and Bloch's theorem for the wavefunction

Lecture 56 - Applying perturbation theory to free electron wavefunctions and nearly free electron model

Lecture 57 - Applying perturbation theory to free electron wavefunctions and creation of energy gap at zone boundaries

Lecture 58 - Mixing of plane waves to get Bloch Wavefunction - I

Lecture 59 - Mixing of plane waves to get Bloch Wavefunction - II

Lecture 60 - Equivalence of wave vectors k and k+G and reduced zone scheme

Lecture 61 - Applying periodic boundary condition to Bloch wavefunction and counting the number of states

Lecture 62 - Band theory of metals, insulators and semiconductors

Lecture 63 - Kronig- Penney model

Lecture 64 - Bloch wavefunction as a linear combination of atomic orbitals: Tight Binding Model- I

Lecture 65 - Tight Binding Model - II

Lecture 66 - Semiclassical dynamics of a particle in a band and Bloch oscillations

Lecture 67 - Experimental observations of Bloch oscillations

Lecture 68 - Concept of hole as a current carrier in semiconductors - I

Lecture 69 - Concept of hole as a current carrier in semiconductors - II

Lecture 70 - Calculating carrier density in semiconductors - I

Lecture 71 - Calculating carrier density in semiconductors - II

Lecture 72 - Donor and acceptor energy levels in a semiconductor

Lecture 73 - charge carrier density in n-type and p-type semiconductors

Lecture 74 - Electrical conductivity and hall coefficient in semiconductors

Lecture 75 - Paramagnetism in solids I - Magnetic moment and Lande g factor for atoms

Lecture 76 - Paramagnetism in solids II - temperature dependence of paramagnetic susceptibility and Curie's Law

Lecture 77 - Hund's rule for calculating the total angular momentum J, orbital angular momentum L and spin angular momentum S for an atom

Lecture 78 - Examples of performing paramagnetic susceptibility calculations

Lecture 79 - Diamagnetism in Solids

Lecture 80 - Understanding quenching of orbital angular momentum in transition metal ions

Lecture 81 - Ferromagnetism in solids

Lecture 82 - Introduction to Meissner state of superconductors and levitation

Lecture 83 - Superconducting materials and Type-I and Type-II superconductors

Lecture 84 - London's equation for superconductors

Lecture 85 - Application of London's equation, behavior

Lecture 86 - A qualitative introduction to BCS theory of superconductivity

Lecture 87 - Josephson's effect in superconductors and tunneling current across barriers

Lecture 40 - Magnetic Order of different types and Heisenberg model

Lecture 41 - Ising Model

Lecture 42 - Mean Field Theory

Lecture 43 - Spontaneous magnetisation and 1D Ising Model

Lecture 44 - Symmetries of Ising model, Exact Solution

Lecture 45 - Ferromagnetic Heisenberg Model

Lecture 46 - Ground State and Magnons/Excitations

Lecture 47 - Superconductivity

Lecture 48 - London Equation

Lecture 49 - Meisner Effect from London Equation

Lecture 50 - Cooper problem

Lecture 51 - Instability of the Fermi Surface

Lecture 52 - BCS Theory Introduction

Lecture 53 - BCS Theory, Excitation Spectrum

Lecture 54 - BCS

Lecture 55 - Tunneling and Ginzberg Landau Theory

Lecture 56 - Electrodynamics of Superconductivity

Lecture 57 - Type II superconductors

Lecture 58 - Josephson junction

Lecture 59 - Vortices, SQUID, Quantum Supremacy and Qubits

Lecture 60 - Topological state of matter, XY Model, Topological Insulators

NPTEL : NOC:Physics of Linear and Nonlinear Optical Waveguides (Physics)

Co-ordinators : Prof. Samudra Roy

Lecture 1 - Wave Equation, Maxwellâ€™s equation, Plane wave

Lecture 2 - EM wave in vacuum, Poynting vector, Maxwellâ€™s equation in Dielectric Medium

Lecture 3 - Poynting Vector, Maxwellâ€™s equation in dielectric medium (Continued...)

Lecture 4 - Total Internal reflection, Evanescent wave

Lecture 5 - Step-index fiber (SIF), Light guidance in SIF

Lecture 6 - Light guidance in SIF (Skew Ray), V-Parameter, Discrete Ray

Lecture 7 - Cutoff wavelength, Fiber characteristics

Lecture 8 - Fiber Loss, dB units, Dispersion

Lecture 9 - Dispersion, Ray Path constant

Lecture 10 - Ray path constant, Ray equation

Lecture 11 - Ray equation (Continued...)

Lecture 12 - Ray transit time

Lecture 13 - Ray transit time (Continued...)

Lecture 14 - Material dispersion

Lecture 15 - Material dispersion (Continued...)

Lecture 16 - Material Dispersion (Continued...), Dispersion Coefficient

Lecture 17 - Pulse Broadening

Lecture 18 - Pulse Propagation in Dispersive Medium

Lecture 19 - Pulse Propagation in Dispersive Medium (Continued...)

Lecture 20 - Concept of Modes

Lecture 21 - TE and TM Modes

Lecture 22 - TE and TM Modes (Continued...)

Lecture 23 - Modes in Slab waveguide

Lecture 24 - Modes in Slab waveguide (Continued...)

Lecture 25 - Modes in Slab waveguide (Continued...)

Lecture 26 - Modes in Slab Waveguide (Continued...)

Lecture 27 - Waveguide Dispersion

Lecture 28 - Physical Understanding of Modes

Lecture 29 - Power Associated with a Modes

Lecture 30 - Modes in an Optical Fiber

Lecture 31 - Modes in an optical fiber (Continued...)

Lecture 32 - Modes in an optical fiber (Continued...)

Lecture 33 - LPlm mode structure

Lecture 34 - Optical fiber mode morphology (Continued...)

Lecture 35 - Effective area of mode, Fiber optics components

Lecture 36 - Directional Coupler

Lecture 37 - Coupled Mode Theory

Lecture 38 - Coupled Mode Theory (Continued...)

Lecture 39 - 3 dB power splitter

Lecture 40 - Working principle of WDM coupler

Lecture 41 - Fiber Bragg Grating

Lecture 42 - Fiber Bragg Grating (Continued...)

Lecture 43 - Reflectivity Calculation

Lecture 44 - Reflectivity Calculation (Continued...)

Lecture 45 - Reflectivity calculation of FBG (Continued...)

Lecture 46 - Reflectivity calculation of FBG (Continued...)

Lecture 47 - Reflectivity calculation of FBG (Continued...)

Lecture 48 - Bandwidth of reflectivity

Lecture 49 - Basic nonlinear optics

Lecture 50 - Frequency mixing, Optical Kerr effect

Lecture 51 - Optical Kerr effect (Continued...)

Lecture 52 - Self Phase Modulation

Lecture 53 - Self Phase Modulation (Continued...)

Lecture 54 - Self Phase Modulation (Continued...)

Lecture 55 - Pulse propagation in nonlinear waveguide

Lecture 56 - Pulse propagation in nonlinear waveguide (Continued...)

Lecture 57 - Pulse propagation in nonlinear dispersive waveguide

Lecture 58 - Pulse propagation in nonlinear dispersive waveguide (Continued...)

Lecture 59 - Concept of optical soliton

Lecture 60 - Concept of optical soliton (Continued...)

NPTEL : NOC:Physics of Renewable Energy Systems (Physics)

Co-ordinators : Prof. Amreesh Chandra

Lecture 1 - Introduction and relevance of the course

Lecture 2 - Energy sources

Lecture 3 - Solar Radiation

Lecture 4 - Solar Photovoltaic Systems

Lecture 5 - Origin of Band Structure and Energy Band Gap

Lecture 6 - Basics of Semiconductors

Lecture 7 - Construction of Solar Cells

Lecture 8 - Characterization of Solar Cells and Future Direction

Lecture 9 - Solar Heaters

Lecture 10 - Introduction to Wind Energy

Lecture 11 - Continuity Equation and its applications

Lecture 12 - Betz Criteria for extracting wind power

Lecture 13 - Wind turbines and their operation

Lecture 14 - Materials Aspects and future direction

Lecture 15 - Introduction to Hydroelectric Power

Lecture 16 - Hydroelectric Power Station and Turbines

Lecture 17 - Wave power and converters

Lecture 18 - Introduction to Tidal Power

Lecture 19 - Tidal Power and Geothermal Energy

Lecture 20 - Introduction to Energy Storage Systems

Lecture 21 - Thermal Energy Storage

Lecture 22 - Basics of Mechanical Energy Storage

Lecture 23 - Pumped Hydroelectric to Flywheels (Mechanical Energy Storage Systems)

Lecture 24 - Introduction to Li-ion battery

Lecture 25 - Characteristics and Parameters of Li-ion batteries

Lecture 26 - Cathode Materials for Li-ion batteries

Lecture 27 - Anode Materials for Li-ion batteries

Lecture 28 - Electrolytes and Separators for Li-batteries

Lecture 29 - From battery to supercapacitors

Lecture 30 - Construction, development and classification of Supercapacitors

Lecture 31 - Electric double layer capacitors (EDLCs)

Lecture 32 - Pseudocapacitors

Lecture 33 - Electrochemical Techniques for Supercapacitors and Batteries

Lecture 34 - From material to a supercapacitor device

Lecture 35 - Effect of temperature on supercapacitor performance

Lecture 36 - Effect of external magnetic field and frequency on supercapacitors

Lecture 37 - Introduction to Fuel Cells

Lecture 38 - Explanation of Fuel cell systems

Lecture 39 - Microbial Fuel Cells

Lecture 40 - Nanotechnology and Nanomaterials for Energy Applications

Lecture 41 - Synthesis of nanomaterials

Lecture 42 - Carbon- and metal-oxide based nanomaterials

Lecture 43 - Nanocatalysts

Lecture 44 - Characterization techniques for solid materials

Lecture 45 - X-ray diffraction method

Lecture 46 - UV-Visible Spectroscopy

Lecture 47 - Fourier Transform Infrared Spectroscopy

Lecture 48 - SEM, TEM and XPS

Lecture 49 - Particle size and zeta potential analysis

Lecture 50 - BET analysis

Lecture 51 - Electrochemical Impedance Spectroscopy

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : NOC:Thermal Physics (Physics)

Co-ordinators : Prof. Debamalya Banerjee

Lecture 1 - Foundation of kinetic theory of gasses

Lecture 2 - Maxwell's law for speed distribution of gas molecules

Lecture 3 - Average speeds in an ideal gas assembly

Lecture 4 - Principle of equipartition of energy

Lecture 5 - Maxwell's law for energy distribution of gas molecules

Lecture 6 - The mean free path of a gas assembly

Lecture 7 - Expression for mean free path

Lecture 8 - Experimental determination of mean free path

Lecture 9 - Pressure an molecular flux from mean free path

Lecture 10 - Problems on mean free path

Lecture 11 - Transport in fluids: introduction

Lecture 12 - Viscosity: transport of momentum

Lecture 13 - Thermal conductivity: trasnport of thermal energy

Lecture 14 - Diffusion coefficient: transport of mass

Lecture 15 - Molecular effusion: theory and applications

Lecture 16 - Brownian motion: concept, features, theory of fluctuation

Lecture 17 - Brownian motion: mean square displacement and vertical distribution of particles

Lecture 18 - Perrin's experiment on Brownian motion - Part 1

Lecture 19 - Perrin's experiment on Brownian motion - Part 2

Lecture 20 - Problems on Brownian motion, Rotational brownian motion

Lecture 21 - Specific heat of solids: Dulong-Petit law and Einstein theory

Lecture 22 - Limitaion of Einstein theory of specific heat

Lecture 23 - Debye theory of specific heat

Lecture 24 - Behavior of real gasses

Lecture 25 - Van der Waals equation of state

Lecture 26 - Critical parameters from Van der Waal's equation

Lecture 27 - Determination of Van der Waals' constants and Boyle temperature

Lecture 28 - Other equations of state

Lecture 29 - Measurement of temperature: Celcius scale, ideal gas scale, absolute zero

Lecture 30 - The platinum resistance thermometer

Lecture 31 - Basic concepts of classical thermodynamics

HTML Links for 1,32,200+ NPTEL Video Lectures, Created by LinuXpert Systems, Chennai

Lecture 32 - Basic concepts of classical thermodynamics (Continued...)

Lecture 33 - First law of thermodynamics

Lecture 34 - General description of work done and specific heat

Lecture 35 - General discussion on Heat conduction and elastic properties

Lecture 36 - Cyclic processes

Lecture 37 - The reversible heat engine: Carnot cycle

Lecture 38 - Refrigarator and Carnot Theorem

Lecture 39 - 2nd law and Clausius theorem

Lecture 40 - Concept of Entropy and mathematical form of 2nd law

Lecture 41 - The entropy principle

Lecture 42 - Efficiency of a cycle from T-S diagram

Lecture 43 - The Otto cycle

Lecture 44 - The Diesel cycle

Lecture 45 - Entropy and available energy

Lecture 46 - Thermodynamic relations

Lecture 47 - Application of thermodynamic relation

Lecture 48 - The free energy functions

Lecture 49 - Condition for thermodynamic equilibri

Lecture 50 - Thermodynamics of chemical reaction

Lecture 51 - Equilibruim between phases: The Clapeyron equation

Lecture 52 - 1st order phase transion along liquid-vapor equilibrium

Lecture 53 - Phase diagram and triple point

Lecture 54 - The 2nd latent heat equation

Lecture 55 - Gibbs phase rule and basics of second order phase transion

Lecture 56 - Basic concepts of radiation

Lecture 57 - Diffused radiation and Kirchhoff's law

Lecture 58 - Cavity radiation as a thermodynamic system: Stefan-Boltzmann law

Lecture 59 - Thermodynamics of cavity radiation

Lecture 60 - 3rd law of thermodynamics

NPTEL : NOC:Concepts in Magnetism and Superconductivity (Physics)

Co-ordinators : Prof. A Taraphder

Lecture 1 - Introduction: Magnetism and superconductivity as macroscopic quantum phenomena

Lecture 2 - Bohr magneton, BvL theorem

Lecture 3 - An electron in a magnetic field, magnetism of isolated atoms

Lecture 4 - Magnetism of isolated atoms (Continued...), Diamagnetism

Lecture 5 - Magnetism of atoms-dia and paramagnetic susceptibilities. Hund's rules,Van Vleck paramagnetism

Lecture 6 - Van Vleck paramagnetism (Continued...), Paramagnetism

Lecture 7 - Curie's law for arbitrary J, adiabatic demagnetization

Lecture 8 - Paramagnetism of conduction electrons - Pauli paramagnetism

Lecture 9 - Ions in a solid: crystal field, orbital quenching, Jahn-Teller effect

Lecture 10 - Jahn-Teller effect (Continued...), Magnetic resonance techniques NMR, ESR

Lecture 11 - Resonance techniques (Continued...), Recapitulation and overview

Lecture 12 - Recapitulation, interacting moments and long range order, dipolar exchange

Lecture 13 - Interacting moments, 2-electron system, origin of exchange and spin Hamiltonian

Lecture 14 - Spin Hamiltonian, Heisenberg model, Exchange interactions: direct

Lecture 15 - GMR, spin model and mean-field theory, Ising model

Lecture 16 - Ising model and its properties

Lecture 17 - Ising model and its properties (Continued...), absence of LRO in d=1, mean-field theory

Lecture 18 - Ising model recap, applications, exact solutions

Lecture 19 - Exact solution of Ising model in d=1, exact results in d=2. Mermin-Wagner theorem

Lecture 20 - Recap - Exact solution of Ising model. Mermin-Wagner theorem on the absence

Lecture 21 - Ferromagnetic Heisenberg model ground state

Lecture 22 - Ferromagnetic Heisenberg model, spin-waves and magnons

Lecture 23 - Antiferromagnetic Heisenberg model, AF magnetic structures

Lecture 24 - AF magnetic structures, susceptibility and excitations

Lecture 25 - Antiferromagnets and frustration, spin glass

Lecture 26 - Superconductivity: discovery, properties

Lecture 27 - Superconductivity: Meissner effect, London Equation

Lecture 28 - Electron-phonon interaction, Cooper problem

Lecture 29 - Cooper problem, setting up the BCS theory

Lecture 30 - BCS wave function, the Superconducting state and calculations of various properties

Lecture 31 - BCS theory (Continued...), energy gap, transition temperature

Lecture 32 - Consequences of BCS theory, gap vs T, Transition temperature, specific heat, tunnelling

Lecture 33 - Transition temperature, specific heat, tunnelling

Lecture 34 - Andreev reflection, Ginzburg-Landau Theory and electrodynamics of superconductors

Lecture 35 - Ginzburg-Landau theory, coherence length and Type I and II superconductors

Lecture 36 - Flux lattice, Flux quantization, Josephson junctions

Lecture 37 - Josephson effect and Josephson junctions

Lecture 38 - SQUID, Quantum computers and Josephson junction Qubits

Lecture 39 - High-Temperature Superconductivity: an enduring enigma

Lecture 40 - Overview and conclusion

NPTEL : NOC:Foundations of Classical Electrodynamics (Physics)

Co-ordinators : Prof. Samudra Roy

Lecture 1 - Vector analysis, Scalar and vector fields, vector identities

Lecture 2 - Vector Analysis (Continued...)

Lecture 3 - Use of Levi-Civita Symbol, Coordinate system

Lecture 4 - Coordinate system, Orthogonal Transformation

Lecture 5 - Spherical Coordinate system, Line, surface and volume element

Lecture 6 - Line, surface and volume element (Continued...)

Lecture 7 - Line, surface and volume integral

Lecture 8 - Differential calculus, Gradient

Lecture 9 - Gradient operator, Concept of divergence

Lecture 10 - Divergence operator, Divergence Theorem

Lecture 11 - Curl operator, Stokes Theorem

Lecture 12 - Gradient, Divergence and Curl (A recap), Vector identities

Lecture 13 - Curvilinear coordinate system

Lecture 14 - Curvilinear coordinate system (Continued...)

Lecture 15 - Curvilinear coordinate system (Continued...)

Lecture 16 - Delta Function

Lecture 17 - Delta Function (Continued...)

Lecture 18 - Helmholtz's Theorem

Lecture 19 - Helmholtz's Theorem(Recap), Tutorial

Lecture 20 - Tutorial (Continued...)

Lecture 21 - Concept of charge, Charge density

Lecture 22 - Coulomb's Law

Lecture 23 - Coulomb's Law (Continued...), Charge distribution

Lecture 24 - Charge distribution problem, Gauss's Law

Lecture 25 - Topics More on Gauss's Law

Lecture 26 - Application of Gauss's Law

Lecture 27 - Electrostatic potential

Lecture 28 - Electrostatic potential (Continued...)

Lecture 26 - Perturbative treatment of relativistic effectsâ€¦ Schrodinger's and Dirac QM

Lecture 27 - Probing the atom - Collisions and Spectroscopy - boundary conditions - 1

Lecture 28 - Atomic Probes - Collisions and Spectroscopy - boundary conditions - 2

Lecture 29 - Atomic Probes - Collisions and Spectroscopy - Scattering phase shifts and boundary conditions

Lecture 30 - Atomic Probes - Time reversal symmetry - applications in atomic collisions and photoionization processes

Lecture 31 - Atomic Photoionization cross sections, angular distributions of photoelectrons - 1

Lecture 32 - Atomic Photoionization cross sections, angular distributions of photoelectrons - 2

Lecture 33 - Atomic Photoionization cross sections, angular distributions of photoelectrons - 3

Lecture 34 - Atomic Photoionization cross sections, angular distributions of photoelectrons - 4

Lecture 35 - Atomic Photoionization cross sections, angular distributions of photoelectrons Cooper Zare Formula

Lecture 36 - Stark- Zeeman Spectroscopy - Stark effect

Lecture 37 - Stark- Zeeman Spectroscopy - Stark effect on n=2 excited state of the H atom Zeeman effect

Lecture 38 - Stark- Zeeman Spectroscopy - Normal, Anomalous Zeeman effect; Paschen- Back effect

Lecture 39 - Stark- Zeeman Spectroscopy - Anomalous Zeeman effect

Lecture 40 - Zeeman effect Fine structure, Hyperfine structure - Elemental, rudimentary introduction to Laser Cooling, BEC, Atomic Clock / Attosecond metrology

Lecture 29 - Momentum balance principle, critical review: projectile motion in real-life

Lecture 30 - Projectile motion - effect of lift and thrust force by examples

Lecture 31 - More on rocket motion - comparing effect of thrust in deep space and at lift off

Lecture 32 - Collisions in daily life - application of energy and momentum balance principles

Lecture 33 - Collision at micro-meter, atomic and sub-atomic scales - Brownian motion, Compton effect

Lecture 34 - Concepts necessary for translation and rotation of rigid bodies - centre of mass

Lecture 35 - Centre of mass of composite objects

Lecture 36 - Concepts necessary for translation and rotation of rigid bodies - moment of inertia

Lecture 37 - More on moment of inertia - 3D objects, composite objects, engineering applications

Lecture 38 - Symmetry of mass distribution - product of inertia

Lecture 39 - Determining the principal axes of rotation and moment of inertia about them

Lecture 40 - Example of finding principal axes, introduction to rotation, the angular velocity vector

Lecture 41 - Rotation of rigid bodies - the angular momentum vector

Lecture 42 - Rotation of rigid bodies - torque

Lecture 43 - Translation and rotation of rigid bodies - computing rules

Lecture 44 - Translation and rotation of rigid bodies - examples (rolling, collision with rotation)

NPTEL : NOC:Plasma Physics and Applications (Physics)

Lecture 34 - Plasma as a fluid: Governing Equations

Lecture 35 - MHD Approximation - I

Lecture 36 - MHD Approximation - II

Lecture 37 - Plasma as a fluid: Electric and Magnetic Properties - I

Lecture 38 - Plasma as a fluid: Electric and Magnetic Properties - II

Lecture 39 - Plasma as a fluid: Fluid Drift - I

Lecture 40 - Plasma as a fluid: Fluid Drift - II

Lecture 41 - Magnetic Pressure

Lecture 42 - Wave in Plasma: Perturbation Theory

Lecture 43 - Wave in Plasma: Plasma Oscillation

Lecture 44 - Wave in Plasma: Dispersion Relation

Lecture 45 - Ion Acoustic Wave - I

Lecture 46 - Ion Acoustic Wave - II

Lecture 47 - Ion Acoustic Wave - III

Lecture 48 - Invalidity of Plasma Approximation - I

Lecture 49 - Invalidity of Plasma Approximation - II

Lecture 50 - Electromagnetic Waves in Plasma

Lecture 51 - Collisions and Diffusion in Plasma - I

Lecture 52 - Collisions and Diffusion in Plasma - II

Lecture 53 - Ambipolar Diffusion - I

Lecture 54 - Ambipolar Diffusion - II

Lecture 55 - Diffusion Equation

Lecture 56 - Diffusion in Presence of B - I

Lecture 57 - Diffusion in Presence of B - II

Lecture 58 - Instabilities in Plasma

Lecture 59 - Laser Produced Plasma and Pulsed Laser Deposited (PLD) Thin Film - I

Lecture 60 - Laser Produced Plasma and Pulsed Laser Deposited (PLD) Thin Film - II

Lecture 61 - Surface Modification of Metallic Components by Plasma Nitriding - I

Lecture 62 - Surface Modification of Metallic Components by Plasma Nitriding - II

NPTEL : Relativistic Quantum Mechanics (Physics)

Co-ordinators : Prof. Apoorva D Patel

Lecture 1 - Introduction, The Klein-Gordon equation

Lecture 2 - Particles and antiparticles, Two component framework

Lecture 3 - Coupling to electromagnetism, Solution of the Coulomb problem

Lecture 4 - Bohr-Sommerfeld semiclassical solution of the Coulomb problem, The Dirac equation and the Clifford algebra

Lecture 5 - Dirac matrices, Covariant form of the Dirac equation, Equations of motion, Spin, Free particle solutions

Lecture 6 - Electromagnetic interactions, Gyromagnetic ratio

Lecture 7 - The Hydrogen atom problem, Symmetries, Parity, Separation of variables

Lecture 8 - The Frobenius method solution, Energy levels and wavefunctions

Lecture 9 - Non-relativistic reduction, The Foldy-Wouthuysen transformation

Lecture 10 - Interpretation of relativistic corrections, Reflection from a potential barrier

Lecture 11 - The Klein paradox, Pair creation process and examples

Lecture 12 - Zitterbewegung, Hole theory and antiparticles

Lecture 13 - Charge conjugation symmetry, Chirality, Projection operators, The Weyl equation

Lecture 14 - Weyl and Majorana representations of the Dirac equation, Unitary and antiunitary symmetries

Lecture 15 - Time reversal symmetry, The PCT invariance

Lecture 16 - Arrow of time and particle-antiparticle asymmetry, Band theory for graphene

Lecture 17 - Dirac equation structure of low energy graphene states, Relativistic signatures in graphene properties

Lecture 18 - Groups and symmetries, The Lorentz and Poincare groups

Lecture 19 - Group representations, generators and algebra, Translations, rotations and boosts

Lecture 20 - The spinor representation of SL(2,C), The spin-statistics theorem

Lecture 21 - Finite dimensional representations of the Lorentz group, Euclidean and Galilean groups

Lecture 22 - Classification of one particle states, The little group, Mass, spin and helicity

Lecture 23 - Massive and massless one particle states

Lecture 24 - P and T transformations, Lorentz covariance of spinors

Lecture 25 - Lorentz group classification of Dirac operators, Orthogonality and completeness of Dirac spinors, Projection operators

Lecture 26 - Propagator theory, Non-relativistic case and causality

Lecture 27 - Relativistic case, Particle and antiparticle contributions, Feynman prescription and the propagator

Lecture 28 - Interactions and formal perturbative theory, The S-matrix and Feynman diagrams

Lecture 29 - Trace theorems for products of Dirac matrices

Lecture 30 - Photons and the gauge symmetry

Lecture 31 - Abelian local gauge symmetry, The covariant derivative and invariants

Lecture 32 - Charge quantisation, Photon propagator, Current conservation and polarisations

Lecture 33 - Feynman rules for Quantum Electrodynamics, Nature of perturbative expansion

Lecture 34 - Dyson's analysis of the perturbation series, Singularities of the S-matrix, Elementary QED processes

Lecture 35 - The T-matrix, Coulomb scattering

Lecture 36 - Mott cross-section, Compton scattering

Lecture 37 - Klein-Nishina result for cross-section

Lecture 38 - Photon polarisation sums, Pair production through annihilation

Lecture 39 - Unpolarised and polarised cross-sections

Lecture 40 - Helicity properties, Bound state formation

Lecture 41 - Bound state decay, Non-relativistic potentials

Lecture 42 - Lagrangian formulation of QED, Divergences in Green's functions, Superficially divergent 1-loop diagrams and regularisation

Lecture 43 - Infrared divergences due to massless particles, Renormalisation and finite physical results

Lecture 44 - Symmetry constraints on Green's functions, Furry's theorem, Ward-Takahashi identity, Spontaneous breaking of gauge symmetry and superconductivity

Lecture 45 - Status of QED, Organisation of perturbative expansion, Precision tests

NPTEL : NOC:Control System Design (Physics)

DIGIMAT - The No.1 Learning Management Platform for Creative Learning

NPTEL : Researching Anglo-Indians in India and the Diaspora (Special Lecture Series)

Co-ordinators : Prof. Merin Simi Raj

Lecture 1 - Keynote Address

Lecture 2 - A Synopsis of 'Two Cheers'

Lecture 3 - Higher Education Among Anglo-Indians

Lecture 4 - Perception of trust, risk and intimacy among elderly Anglo-Indians living in Tollygunge home in Kolkata

Lecture 5 - The Daunting Spirit and the Empowering Voice of Eunice De Souza

Lecture 6 - Origin Myth and Anglo-Indian Identity: Exploring the Representation of the History of the Origin of Anglo-Indian community in Hugh and Colleen Gantzers Lyndsale Raj

Lecture 7 - Keynote Address

Lecture 8 - Shame and Guilt in Alison McQueens The Secret Children

Lecture 9 - Re-visiting McCluskieganj: De-hyphenating the Anglo-Indian Consciousness through Vikas Kumar Jhas Novel

Lecture 10 - The Imaging of the Anglo-Indian Woman in Colonialist Literature

Lecture 11 - Expostulating Celluloid Stereotypes: Researching Anglo-Indian Representation in Malayalam Cinema

Lecture 12 - Chutney Mary: Rethinking AI Identity through their Culinary Consumption Culture

Lecture 13 - In Search of a New Home: Anglo-Indians in the Darjeeling Hills, 1900-1947

Lecture 14 - (Re)discovering Anglo-Indians of Visakhapatnam - An Overview

Lecture 15 - Genealogy of Sporting Culture through a Study of Anglo-Indian Institutions of Asansol

Lecture 16 - Keynote Address

Lecture 17 - Crowdsourcing as a Research Tool

Lecture 18 - Researching Community, Writing Cultures: Challenges and Opportunities

Lecture 19 - Revisiting the Anglo-Indian Community: Making and Unmaking of Anglo-Indian Identity in India

Lecture 20 - Minoritizing English: Anglo-Indians as a Linguistic Minority in India
